Eight archdioceses counted Catholic populations of over 1 million: Chicago, 2,163,380; Boston, 1,698,138; New York, 1,651,400; Newark, N.J., 1,495,298; Los Angeles, 1,421,478; Detroit, 1,396,341; Philadelphia, 1,251,938; and San Francisco, 1,121,595. The largest diocese was Brooklyn, with a membership of 1,493,164.

In the field of education, Catholic colleges and universities totaled 278 in 1962, with 336,614 students. Diocesan and parish high schools numbered 1,536, with 588,968 students; 10,177 elementary schools enrolled 4,367,076 pupils; and 453 private schools had 24,817 pupils. Catholic high school students engaged in released-time programs numbered 992,691; elementary released-time participants numbered 2,756,825. There were 353 homes for the aged, with 33,738 residents.

In the United States and Canada, the Catholic press was represented by 545 church-related weeklies and magazines, with 25,429,488 subscribers.

The annual report of the Commission for Catholic Missions Among the Colored People and the Indians showed the following, as of early 1962: Negro missions and parishes—664,000 Catholics, 507 churches, 760 priests, 24,379 infant baptisms, 12,008 adult baptisms, 349 schools, 97,981 pupils; Indians living on reservations—127,981 Catholics, 399 churches, 229 priests, 4,782 infant baptisms, 763 adult baptisms, 54 schools, and 9,043 pupils. Figures on Catholic Indians not living on reservations are incomplete.

Three new Catholic dioceses were created in the United States in 1962 by Pope John: Oakland, Stockton, and Santa Rosa, Calif., suffragan dioceses of the archdiocese of San Francisco. To the new dioceses were appointed, respectively, Bishop Floyd L. Begin, of Cleveland, Ohio, and Bishop Hugh A. Donohoe and Msgr. Leo T. Maher, both of San Francisco.

Archbishop Joseph T. McGucken succeeded Archbishop John J. Mitty, who died in 1961, in the archdiocese of San Francisco. Bishop Paul J. Hallinan of Charleston, S.C., was named archbishop of Atlanta, Ga. Atlanta was raised to the status of a metropolitan see, with suffragan dioceses in Charleston, Miami, and St. Augustine, Fla.—all formerly suffragans of the archdiocese of Baltimore.

The Catholic interracial movement, inaugurated in 1934, continued to expand. Latest in the increasing chains of Catholic Interracial Councils were those of San Francisco, Peoria, Ill., Rockville Centre, N.Y., Miami Valley, Ohio, and Cleveland. Several Southern dioceses, including Little Rock, Ark., and Charleston, adopted systematic schedules for parish and school instruction in the Catholic doctrine of interracial justice.

Schools continued to be quietly integrated. Despite dire predictions of failure, Catholic schools in the archdiocese of New Orleans were opened in September 1962 on an integrated basis, except in one parish (county) where the local political leader openly defied the church. (See Education; New Orleans.)

ROOSEVELT, (Anna) Eleanor

U.S. humanitarian and writer, widow of President Franklin D. Roosevelt: b. New York, N.Y., Oct. 11, 1884; d. New York, Nov. 7, 1962.

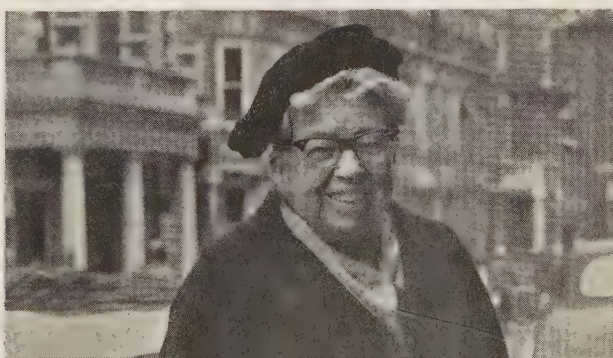
The niece of one president of the United States and the wife of another, Eleanor Roosevelt

entered public life at the age of 37. In the next 41 years she gained worldwide recognition, first as Franklin Roosevelt's wife and then in her own right, as a champion of humanitarian causes and a voice calling out for understanding, peace, and brotherhood. Widely called the "First Lady of the World," she was time and again named the world's most admired woman in polls. People who had never met her felt they knew her. She was on the side of the poor, the oppressed, the victims of the Depression and the war. After her death UN Ambassador Adlai E. Stevenson, her close friend and protégé, paraphrased a Chinese proverb to summarize her life: "She would rather light a candle than curse the darkness, and her glow has warmed the world." The New York *Times* editorialized simply: "We shall not soon see her like again. . . . She was one of the greatest of the Roosevelts, honored for character and deed and principle throughout the world."

Eleanor Roosevelt's father, Elliott (President Theodore Roosevelt's younger brother), was of a wealthy Dutch family; her mother, Anna Hall, was descended from Philip Livingston, an Albany, N.Y., merchant and signer of the Declaration of Independence. After her mother's death, when Eleanor was eight, the child went to live with her maternal grandmother in Tivoli, N.Y. Her father died a year and a half later. Instructed by tutors in her early years, she went to an English school when she was 15 and remained there three years, traveling on the Continent during her vacations.

Highlights from the life of Eleanor Roosevelt: (*clockwise from top left*) (1) As a child, age unknown; in 1903 (center); and at the time of her marriage to Franklin Roosevelt in 1905. (2) Four generations of Roosevelts celebrate Christmas 1929 in the executive mansion in Albany, N.Y. Seated in front are Franklin D., Jr., and John A. Roosevelt; in the middle row, from left, are Anne Dall, the Roosevelts' only daughter, with Anne Eleanor Dall; Eleanor and Franklin Roosevelt; Mrs. D. D. Forbes, an aunt of Roosevelt's, and Mrs. James Roosevelt, his mother; in back row are Curtis B. Dall (at left) and James Roosevelt. (3) At Hyde Park, N.Y., on July 4, 1941. (4) (*Left*) With a native guide in Auckland, New Zealand, in 1943; (*right*) addressing the 1960 Democratic National Convention. (5) At the United Nations in 1961 with Ambassador Adlai Stevenson. (6) Gathering material for a TV series in London, February 1962. (7) At her funeral in Hyde Park, Nov. 10, 1962: (front row, from left) Mrs. Kennedy, President Kennedy, former President and Mrs. Truman, and former President Eisenhower, with Vice President Johnson in back of Kennedy.

ALL PHOTOS FROM WIDE WORLD EXCEPT (4, RIGHT) UPI; (6) THE TIMES, LONDON



A shy and awkward girl, Eleanor Roosevelt returned to New York City in 1902 to make her debut, an event she remembered with distaste the rest of her life. It was at this stage that her fifth cousin, Franklin Delano Roosevelt, proposed marriage. He had just been graduated from Harvard College and was attending the Columbia University School of Law in New York City. Their wedding, on March 17, 1905, with President Theodore Roosevelt giving the bride away, was one of the highlights of the New York social season.

For the next 16 years Mrs. Roosevelt settled into a pattern of domesticity. She bore six children—Anna, James, Franklin D., Jr. (who died at the age of three months), Elliott, a second Franklin D., Jr., and John A. In the meantime the political career of Franklin Roosevelt had been progressing steadily—New York state senator in 1911–13, assistant secretary of the Navy under Woodrow Wilson in 1913–20, and Democratic vice presidential candidate under James D. Cox in 1920. After the Democrats were defeated in 1920, Roosevelt began practicing law in New York. In August 1921, while the family was spending the summer on Campobello Island, New Brunswick, Roosevelt was stricken with poliomyelitis, and it soon became evident that he would remain crippled the rest of his life.

Acting at the advice of the family physician and family friends, Mrs. Roosevelt began to take an active part in politics to restore her husband's interest in his career. Already familiar with the social routine of a politician's wife, she now joined the Women's Trade Union League and took an increasingly prominent part in the New York State Democratic Party, serving as financial chairman of the women's division from 1924 to 1928. She maintained her activities in other fields; in 1926 she founded a furniture factory near the Roosevelt home at Hyde Park, N.Y., to provide work for indigent men, and in 1927 she bought a private girls school in New York City, where she was vice principal and taught for six years.

With Roosevelt's election as New York's governor in 1928 his wife ended temporarily her active participation in politics, but she shared the problems and decisions of his office to a large degree. (In discussing the governorship, Roosevelt often used the phrase "Eleanor and I.") In addition, she became active in the Foreign Policy Association and the (New York) City Housing Corporation, and began writing a syndicated column. During Roosevelt's successful presidential campaign of 1932 his wife organized the women's side of the Democratic campaign.

After Roosevelt's inauguration on March 4, 1933, Eleanor Roosevelt became the first president's wife to hold press conferences—for women journalists. She traveled widely throughout the nation, representing the president at official dedications. More importantly, these sojourns enabled her to determine the mood of the people, and she brought back detailed and incisive reports to the president. She also accepted many speaking engagements, and was so active that a rash of "Eleanor jokes" gained circulation, in some cases expressing criticism of her part in government. Generally, Mrs. Roosevelt supported the humanitarian measures of the New Deal.

Mrs. Roosevelt had begun writing a nationally syndicated column, *My Day*, in 1936. Until 1939 it consisted primarily of topics of interest to women, but in that year she began writing of matters of national interest, becoming a sounding board for the Roosevelt administration. In 1941 commentator Raymond Clapper listed her as one of the 10 most important persons in Washington. During World War II she traveled extensively both at home and abroad to American installations and to orphanages and hospitals. Servicemen overseas invariably greeted her with enthusiasm. (She had served as assistant director of civil defense in New York City in 1941–42 but resigned over criticisms of her appointments.)

There was much resentment of Mrs. Roosevelt during her stay in the White House—by those who differed with her politics and ideals, who thought she was too active, who thought a first lady should shy away from controversy. But in the end the antagonism faded and was replaced by respect and affection. Thus her reputation stood at the time of President Roosevelt's death on April 12, 1945.

Then began the second phase of her career. President Truman appointed her a delegate to the General Assembly of the United Nations in 1945. The following year she was named chairman of the Commission on Human Rights of the UN Educational, Scientific and Cultural Organization. Here she helped to draft the Covenant on Human Rights, designed to set a standard of liberty for people throughout the world. Her longest fight—which she lost—was for acceptance of this covenant; but opposition from some colonial powers and some United States congressmen defeated the proposal.

Mrs. Roosevelt resigned the chairmanship of the commission in 1951 and, the following year, when President Eisenhower was elected, she resigned as a United Nations delegate. President Kennedy reappointed her a delegate to the General Assembly in 1961.

In the intervening years she continued her newspaper and magazine columns (*If You Ask Me* had begun appearing in a women's magazine in 1941) and was active in the American Association for the United Nations. She retained her keen interest in the Democratic Party, and she campaigned for Adlai Stevenson in 1952 and 1956, addressing the national convention in both of those years. In 1960 she fought for a Stevenson-Kennedy ticket, and seconded Stevenson's nomination. Identified with the reform faction of the party in New York State and New York City, she took active parts in the city primaries of 1961 and the state primaries of 1962.

Mrs. Roosevelt became ill in September 1962 and entered a New York City hospital, where she marked her 78th birthday. She returned to her New York City home three weeks before her death. On November 10 she was buried next to Franklin Roosevelt in the rose garden at Hyde Park.

Mrs. Roosevelt's books included *It's Up to the Women* (1933), *My Days* (1938), *If You Ask Me* (1946), *This I Remember* (1949), *India, the Awakening East* (1952), and *On My Own* (1958).

RUBBER

Rubber consumption in the United States in 1962 registered a new record high of 1,700,000 tons, topping the previous record year, 1959, by 72,000 tons. Synthetic rubber accounted for 73% of the total, continuing the increase in ratio, unbroken since 1954.

World rubber consumption (free world consumption plus imports into Soviet bloc countries) was 4.3 million tons, a new high for the eighth consecutive year. The total comprised almost exactly 2.1 million tons each of natural and synthetic rubber. Synthetic rubbers have thus reached demand parity with the natural variety in 20 years. Natural rubber has been marketed for over 120 years.

More than 139 million pneumatic tires were produced in 1962, including 77.5 million passenger car tires for replacement, 37 million for original equipment on new cars, and 15 million tires for trucks and buses. In addition, over 3.7 million

farm tractor and implement wheels were rubber-tired. Recapping of motor vehicle tires exceeded 39 million units.

Rubber consumption in the free world exclusive of the United States exceeded 2 million tons in 1962 for the first time, as compared with 1.9 million tons a year earlier. Synthetic types accounted for 840,000 tons, or 42%, as against 40% in 1961. Soviet bloc imports of natural rubber were about 500,000 tons, and of synthetic rubber, an estimated 50,000 tons.

WORLD RUBBER PRODUCTION, 1960–62
(In thousand long tons)

Country	1960	1961	1962[1]
Natural Rubber:			
Malaya	708	739	760
Indonesia	630	671	650
Thailand	167	182	185
Ceylon	97	96	100
Vietnam	75	78	80
Cambodia	37	39	42
British Borneo and Sarawak	72	70	72
Nigeria	59	55	60
Liberia	42	43	43
Congo (Léopoldville)	35	33	33
All other countries	78	84	75
Total	2,000	2,090	2,100
Synthetic Rubber:			
United States	1,436	1,404	1,550
Canada	160	164	170
United Kingdom	90	105	120
Germany	80	86	90
Italy	70	87	90
France	17	40	70
Japan	19	50	70
Netherlands	12	40	40
Total	1,885	1,977	2,200

[1] Estimated.

New Products and Materials.—Urethane foam made significant gains in 1962 with its adoption in the manufacture of mattresses and cushioning for the furniture, automotive, and aircraft industries. Extruded urethane thread, or spandex, also gained in figure-control and general clothing uses. Another development in clothing was a rubber latex that gives fabrics a "memory factor," making shirts, neckties, shoes, and hats retain their shape even after they have been twisted or crumpled.

The year saw the introduction of polyester fiber tire cord which could provide the strength, durability, and fatigue resistance of nylon, and the smooth, soft ride characteristic of rayon cord tires.

Various developments are under way for the growing aerospace industry, notably 16-foot-diameter tires for a manned lunar landing vehicle, and a full-scale research model of an inflatable space station. The latter is a three-story-high structure, shaped like a huge doughnut with a canister at its core, constructed of rubberized fabric.

Manager of Commercial Research, United States Rubber Company.

RUMANIA

Rumania is a Communist-type people's democracy in southeastern Europe, situated on the Black Sea. Its area is 91,700 square miles, and its population (1961 est.) totals 18,566,932. The country is divided into 16 administrative regions, including the Hungarian (Magyar) Autonomous Region. The capital is Bucharest (Bucureşti), which has a population (1961 est.) of 1,354,836. Other principal cities and populations (July 1, 1961, est.)[1]: Bucharest, 1,229,135; Cluj, 163,166; Timişoara, 147,753; Braşov (formerly Stalin), 129,615; Ploeşti, 127,833; Iaşi, 124,715; Constanţa, 115,057; Arad, 113,531; and Brăila, 113,178.

Rumanians are the principal ethnic group. The largest minorities (1956 census) are the Hungarians, 1,587,675; Germans, 384,708; Jews, 146,264; Ukrainians, 60,479; and Yugoslavs (Serbs, Croats, and Slovenes), 46,517. The birth rate in Rumania has experienced the most marked decline of all Soviet-bloc countries, falling from 29.5 in 1938 to 18.9 in 1960.

[1] Excludes towns and communes included in the city's actual administrative territory.

Government.—The Rumanian People's Republic has a totalitarian government similar to those of other Communist-style states. The supreme legislative body is the Grand National Assembly of 465 deputies, who were elected to four-year terms on March 5, 1961. A 17-member State Council, which replaced the Presidium in 1961, is the supreme executive organ of the state. The chairman of the State Council is Gheorghe Gheorghiu-Dej, who is also first secretary of the Central Committee of the Rumanian Workers' Party (RWP), a Communist party which had about 500,000 members in 1962. Ion Gheorghe Maurer is chairman or premier of the Council of Ministers.

The government relies for political support on the Democratic Popular Front (DPF), a Communist-controlled mass organization. Regional and local people's councils are instruments of the central authorities. The RWP controls the country by means of an interlocking party-state system.

Education and Religion.—The country's educational system is state-controlled and secularized, and is modeled on that of the Soviet Union. Education is free and obligatory for seven years. School enrollment, 1961–62 school year: primary and secondary, 2,808,239; teacher-training and college, 9,267; vocational, 159,732; and higher, 83,749. Since 1959, Rumania has required students to work in industry for a certain time each year. In 1960 the government announced the distribution of free textbooks. The University of Bucharest is the most important institution of higher learning. The Rumanian Academy of Sciences in Bucharest is the country's principal center for research.

Over 75% of Rumania's population belongs to the Rumanian Orthodox Church. All religious communities have been persecuted and restricted in their activities. The Law on Religious Cults (1949), which theoretically guarantees freedom of religion, actually imposes full state control over the church.

Finance.—Government revenue, 1962 est.: 78,790 million lei (up 19.6% from 1961); expenditure: 77,790 million, including 49,511 million lei for national economy, 16,964 million for cultural and social affairs, and 3,989 million for national defense (the official exchange rate is 6 lei to the U.S. dollar). Total investments for 1962 were estimated at 32.5 billion lei (up 16.5% from 1961). The government in March 1962 increased taxes on the profits of consumers' and artisans' cooperatives by about 5% to 20% over previous levels.

Transportation and Communications.—Transport networks (miles, 1961): railways, 6,854 (mostly single track); national highways, 7,032 (including 3,540 miles of modernized roads). The economic plan for 1962 envisaged an increase of 11.5% in freight traffic, and the addition of 35 diesel locomotives to the rolling stock. Rumania has small Danube and Black Sea fleets. TAROM, the state airline, operates internal routes and flights to several European cities; Bucharest is also served by Sabena and four Communist-bloc airlines. Radio receiver licenses numbered 2,165,000 in 1961; television sets, 88,000. Five new television stations and two radio broadcasting stations were commissioned in 1962.

Agriculture.—In December 1961 it was announced that the socialized sector of agriculture comprised over

Soviet Premier Nikita Khrushchev (hand upraised) speaks to a farmer near Budapest on his visit to Rumania in June. State Council Chairman Gheorghe Gheorghiu-Dej is at right.

AUTHENTICATED NEWS INTERNATIONAL

90% of the country's arable land. Completion of collectivization was officially accomplished on March 17–18, 1962, or three years ahead of schedule. As private farms no longer exist, a new plan was drawn up for the wholesale reorganization of the country's agriculture.

The Grand National Assembly on April 30 approved the formation of a Higher Council of Agriculture, replacing the Ministry of Agriculture, to administer the collective farms. The executive committee of the Higher Council (about 15–25 members) is an organ of the Council of Ministers, and its president is Mihail Dalea, a secretary of the RWP Central Committee. The Higher Council includes 800–1,000 agricultural specialists on state farms, and scientists from research and educational institutes. Regional, district, and town agricultural councils were also organized.

In early 1962 about 50% of Rumania's livestock was still in private hands. An estimated 3 billion more lei than planned was invested in 1960–62 in agriculture, apparently to help induce peasants to enter collectives with their livestock. On May 13, 1962, the government announced that it would redistribute technical experts in agriculture, as less than half of 15,730 agricultural specialists has been actually working on state or collective farms. Collective farms were merged, and by the end of 1962 they numbered 5,558.

Rumanian agricultural production did not fulfill all the 1961 goals, and the 1962 harvest reportedly was one of the worst in recent years. In August 1962, rationing of bread and cornmeal was reported in Transylvania. Principal crops and yields in 1961 (in thousands of metric tons): wheat, 3,990.3; rye, 104.4; maize, 5,739.6; barley, 468.1; potatoes, 2,874.8; and sugar beets, 2,910.8.

Industry.—In 1961, the second year of Rumania's six-year plan, total production increased by 15.6% and overfulfilled the industrial plan by 4.2%. Labor productivity rose by 9.1% in 1960–61, and was highest in the ferrous metallurgy, machine building, metal processing, chemical, and oil processing industries.

The 1962 economic plan called for increases of 13.5% in industrial production and of 85% in labor productivity. Planned production increases for 1962 (in tons) were: pig iron, about 1.6 million; steel, over 2.5 million; finished rolled products, 1.9 million; crude oil, 11.8 million; high octane gas, 500,000. Electric power was to be increased by 14%; output of the chemical industry, by 25%; and chemical fertilizer production, 50%.

Industrial production in Rumania increased an average 13% annually from 1950 to 1960. Output of producer goods rose 14.8%; consumer goods, 10.7%; and the machine building and chemical industries, 20% each. Rumania had the highest rate of industrial growth of all Soviet satellite countries in 1960, and maintained this high level in 1961. Major industrial products (in thousands of metric tons, 1961): coal, 8,704; pig iron, 1,099; crude steel, 2,127; petroleum, 11,582; cement, 3,308; cotton yarn, 60; wool yarn, 22; and electric power, 8,657 million kw.-hr.

Foreign Trade.—Total exports, 1961: 4,757.1 million lei; imports, 4,886.7 million. The volume of trade rose by 18% and was principally with other Communist countries, although efforts were made to expand commerce with Western and economically underdeveloped countries. The 1962 economic plan called for a 15% increase in foreign trade over 1961, and was to surpass the 1959 level by more than 80%. Rumania's principal exports are industrial machinery, petroleum, chemicals, pharmaceuticals, wood products, cereals, food products, and ores; principal imports are coke, iron ore, metal products, yarns, and machinery.

A new protocol to Rumania's 1961 trade agreement with Cuba was signed on Jan. 25, 1962. Rumania agreed to provide oil-processing installations, tractors, refrigerating compressors, and chemical products in exchange for mineral ores, sugar, and coffee. Under a trade agreement with Great Britain concluded on January 26, Rumania will purchase goods valued at $14.7 million (a 23% increase over 1961), and Britain will import $13.3 million in Rumanian goods. Belgium announced on January 26 that contracts had been signed for the delivery of chemical plants and equipment to Rumania; Belgian exports to Rumania were estimated at $6.2 million in 1961. A protocol signed in Moscow on Jan. 31, 1962, stated that Rumanian-Soviet trade will total 600 million rubles in 1962, a 10% increase over 1961. A new trade agreement with Bulgaria signed in late January provided for an estimated increase of 17% in trade over 1961.

Events, 1962.—Gheorghe Gheorghiu-Dej, Rumanian Communist Party chief for more than a decade, has continued to conform to Soviet policies. Observers have reported signs of a relaxed atmosphere in Rumania, however. De-Stalinization measures were decreed by the Central Committee of the Rumanian Workers' Party in November 1961, and as of March 15, 1962, outward symbols and reminders of Stalinism had disappeared from the country. On May 17, the RWP Central Committee invited former members of defunct peasant and bourgeois parties to join the RWP, although membership was barred to former high officials of the parties.

In addition to the wholesale reorganization in agriculture (see above, *Agriculture*), Bucharest authorities also decentralized leadership in cultural activities. It was announced on June 6 that the Ministry of Education and Culture was to be replaced by a new Ministry of Education, headed by Ilie Murgulescu, and a new State Committee for Culture and Art, under Constanta Craciun, former deputy minister of education and culture. The move was regarded as an attempt to reduce the bureaucracy and to expand cultural activity at the regional and district levels.

Soviet Premier Khrushchev visited Rumania from June 18 to 25. His mission apparently was to explain Soviet policy in regard to Yugoslavia, and to discuss the further building of the "socialist commonwealth."

In July, Bulgarian Communist chief Todor Zhivkov visited Bucharest to discuss plans with Rumanian officials for a hydroelectrical project on the Danube River in the area of Islaz Somovit. Yugoslavia and Rumania held negotiations late in the year to complete plans for a hydroelectric project (first proposed in 1956) at the Iron Gate on the Danube. The dam would impound more than 35 billion cubic feet of water, and would provide a navigable passage through the Iron Gate. The project would eventually supply over 10 billion kw.-hr. of electric power annually. The total cost was estimated at nearly $300 million.

RUSK, (David) Dean

U.S. secretary of state: b. Cherokee County, Georgia, Feb. 9, 1909.

In an aside during an address to the Foreign Policy Association on November 20 in New York, Secretary Rusk remarked: "Perhaps I shouldn't say this, but I think it is of some importance that, at a time when the United Nations is voting unanimously for disarmament, 70 nations are asking the United States for military assistance." The world's hopes for peace and its fears of war both ran high in 1962, and the American secretary of state was certainly a principal in the drama of determining whether the one or the other would be realized. But, although his year was a succession of international conferences, Rusk to most of the public remained a relatively little-known figure—the efficient but largely anonymous instrument of a foreign policy that was more vividly personified by a dynamic president.

Dean Rusk was educated at Davidson College in North Carolina (B.A., 1931) and at St. John's College, Oxford, as a Rhodes scholar. From 1934 to 1940 he taught at Mills College, Oakland, Calif. An Army officer during World War II, he rose to deputy chief of staff for the China-Burma-India theater. In the postwar years he alternately filled several posts in the State and War departments before being named director of the Office of Special Political Affairs (1947–49). Elevated to deputy under secretary in charge of policy coordination, he voluntarily stepped down in March 1950 to accept the trouble-shooting post of assistant secretary for Far Eastern Affairs, and in June he was instrumental in the United Nations decision to intervene in Korea. He also played a prominent role in negotiating the Japanese peace treaty. In 1952 he left to become president (July 1) of the Rockefeller Foundation, and in eight years directed the spending of over $247 million on worldwide welfare projects. He was named secretary of state by President-elect Kennedy on Dec. 12, 1960, and was sworn in on Jan. 21, 1961.

At the instigation of Secretary Rusk, the foreign ministers of the Organization of American States (OAS) gathered at Punta del Este, Uruguay, on January 22–31 "to meet the mounting Communist offensive" in the Western Hemisphere. The conference failed to fulfill American wishes for the other member nations to break off diplomatic relations with Cuba and to boycott its trade, but Rusk did succeed in having Cuba excluded from the activities of the OAS and in winning a formal condemnation of the Marxist-Leninist form of government as "incompatible with the inter-American system." President Kennedy on February 1 expressed the "greatest pride and satisfaction" in the results, and Rusk in a television address to the nation on February 2 called them "deeply reassuring." It was generally recognized that the secretary of state had done much to restore confidence in the United States, which had suffered disastrously after the abortive invasion of Cuba in April 1961. Some observers, however, questioned whether the gains made at the conference warranted the divisions which it revealed, especially in the abstention of most of the larger nations in the vote to ostracize Cuba.

Rusk met frequently throughout the year with Soviet Foreign Minister Andrei Gromyko and Ambassador Anatoly F. Dobrynin to discuss East-West differences over Berlin and nuclear disarmament, but little progress toward a permanent settlement of either problem was evident. On March 27, after attending the 17-nation disarmament conference at Geneva, Rusk stated his belief that the existing balance of power could provide a basis for limiting the arms race, which he predicted would, if not checked, double the world's destructive capacity by 1966. On March 1, he revived an earlier suggestion of President Kennedy's that an international authority be created to guarantee Western access to Berlin. Fearful of an American withdrawal, the West Germans opposed the proposal, and in April the secretary accused the Bonn regime of committing a "breach of confidence" by revealing certain details of the United States position. Angered by Rusk's tone, Chancellor Adenauer denounced the proposal, and German-American relations were strained until the American plan, lacking Soviet support, gradually expired.

Rusk visited five capitals of nations belonging to the North Atlantic Treaty Organization (NATO) on June 19–28 (when he traveled his 150,000th mile abroad as secretary of state). In Paris, he conferred with President de Gaulle and Foreign Minister Couve de Murville on the possibility of reconciling the French ambition for an independent nuclear striking force and the American desire for close coordination of the strategic forces of all NATO members. On June 21, in Berlin, Rusk called the wall enclosing East Berlin "an affront to human dignity," and promised that it would be brought down. Later, in Bonn, he and Chancellor Adenauer affirmed the unity of their stand against Communist threats. Rusk visited Rome on June 23, before going on to London where he, Prime Minister Macmillan, and Foreign Secretary Lord Home discussed Great Britain's proposed entry into the Common Market. On June 27, Rusk traveled to Lisbon, where he helped assuage feeling against the United States for its refusal to support Portuguese colonialism.

Addressing 19 Latin American ambassadors in Washington, September 5, Rusk reiterated the determination of the United States to prevent the export of communism from Cuba, and a week later, in response to a Soviet warning that action by the United States against Cuba or against Soviet ships bound for Cuba would precipitate nuclear war, he said, "We are not nervous or afraid. We'll proceed as we find it necessary." Appearing before Senate committees soon after, he advocated continuing surveillance of Cuban waters despite the risk of incidents. State Department pressure was brought to bear on nations shipping Soviet goods to Cuba, and on September 27, Turkey became the first NATO member to ban its vessels from doing so.

WIDE WORLD

U.S. Secretary of State Rusk (left) and Germany's Chancellor Adenauer outside the chancellery in Bonn, on June 22.

Rusk was first informed of the photographs of offensive missile sites in Cuba on October 15, and beginning the next morning he deliberated, in secrecy, with the group later known as the Executive Committee of the National Security Council (the top-echelon crisis policy panel). He participated in President Kennedy's meeting with Foreign Minister Gromyko on October 18, and on October 22—the day of the first public announcement of the crisis—he informed Ambassador Dobrynin of the discovery of the missiles and the planned quarantine a few minutes before the president's speech.

That this information came as a complete surprise to the Soviet Union, after it had been the subject of intense discussions in Washington for a full week, reflected favorably on the State Department. Acting as representative to the meeting of the OAS the next day, Rusk won unanimous approval of a resolution authorizing the use of force to implement the quarantine. The secretary of state was given much of the credit for the powerful backing which members of the OAS and NATO gave the United States during the crisis; this support was considered by some to be the decisive factor in the Soviet acquiescence.

Rusk conferred with Soviet Deputy Premier Anastas I. Mikoyan on November 29–30 in Washington, and on December 10 stated that, despite the removal of the offensive missiles, the United States would not tolerate the continued presence of Soviet military personnel in Cuba. At the opening session of the annual conference of NATO foreign ministers in Paris on December 13, Rusk, on a note of cautious optimism, declared that the Cuban affair had given the Western nations new opportunities for putting the Communist bloc on the defensive.

UNITED NATIONS

President Grégoire Kayibanda of the Republic of Rwanda (at left) stands with Baron Guillaume Logiste, Belgian ambassador, in Kigali on July 1 as Rwanda marks its independence.

RUSSIAN LITERATURE. See Soviet Literature.

RWANDA

Formerly part of the Belgian-administered United Nations trust territory of Ruanda-Urundi, the Republic of Rwanda attained independence on July 1, 1962. Rwanda is a mountainous country of east-central Africa, and is bounded by the Kingdom of Burundi on the south, Tanganyika on the east, Uganda on the north, and the Republic of the Congo (Léopoldville) and Lake Kivu on the west. The total area is 10,169 square miles.

The population at the end of 1960 totaled 2,694,749, excluding a few thousand Belgians. The majority Hutu (Bahutu) tribesmen formerly served in the role of serfs to the large minority of aristocratic Tutsi (Batutsi or Watusi), but the traditional feudal-like social system was abolished in 1961 when the Hutu deposed the Tutsi mwami (king) and formed a republic. The capital of Rwanda is Kigali (1961 est. pop., 5,000).

The Rwanda flag has three equal vertical stripes of red, yellow, and green, and is inscribed in the center with a black letter "R."

Government.—Rwanda is a presidential republic. President Grégoire Kayibanda (elected by the Legislative Assembly on Oct. 26, 1961) heads a 16-member cabinet. The Legislative Assembly consists of 44 members elected by direct universal suffrage; in elections to the Assembly on Sept. 25, 1961, the Republican Democratic Movement, principal political party of the Hutu, won a dominant majority of 35 seats. There is a Supreme Court of five magistrates.

Education and Religion.—About half of the male population is literate. Education is provided principally by Roman Catholic missions. School enrollment in native schools (for Ruanda-Urundi, 1960): 267,393 (about 20% of the school-age population). About half the population is Catholic.

Transportation.—As Rwanda has no railways or navigable rivers, transport is confined to road traffic and to shipping services on Lake Kivu. Roads in the former trust territory aggregated 6,600 miles, most of which were dirt roads. Kigali and Astrida have airfields.

Economy.—The economy is predominantly agricultural. Main subsistence crops are maize, manioc, sorghum, sweet potatoes, bananas, beans, and peanuts. Chief cash crops are coffee, cotton, palm oil, and pyrethrum. Livestock raising is important. Industry is confined largely to the processing of foodstuffs. Minerals mined in small quantities include tin ore and gold. Chief exports are coffee, cotton, and hides and skins. (For financial and economic statistics on the Ruanda-Urundi trust territory, see Burundi.)

Events, 1962.—Independence for the Republic of Rwanda was celebrated quietly in Kigali on June 28. President Kayibanda expressed "sincerest gratitude" to Belgian administrators, United Nations officials, and all others who had helped Rwanda to become independent, and he called on his people to "remain calm" and to "work courageously" for their country. Although Belgium had given the new nation a sizable grant to be spent on independence celebrations, the Rwanda government chose to use the money for the construction of schools and other purposes more in keeping with the country's newly initiated austerity program.

Another reason for the subdued ceremonies was the fear that riotous celebrations might lead to renewed outbreaks of violence between Hutu and Tutsi tribesmen. In the first half of the year there were many sporadic attacks by Tutsi terrorists against the Hutu. Belgian troops succeeded in greatly reducing the number of attacks by midyear, and in the first few weeks after independence only one minor terrorist outbreak occurred. There were indications that most Tutsi tribesmen had at last accepted the recent social revolution that had brought political ascendancy and social equality to the Hutu, and that large-scale tribal warfare would not be renewed. All Belgian troops were withdrawn from the country by August 28.

With a measure of political stability achieved, the Rwanda government was free to tackle the country's serious economic problems. As a beginning toward alleviating the widespread poverty in underdeveloped Rwanda, the government obtained economic aid and technical assistance from the United Nations, and from Belgium and other countries.

Rwanda was admitted to the United Nations on September 18. (For details on United Nations actions leading to independence for the Ruanda-Urundi trust territory, see Burundi; United Nations.)

SAINT HELENA

This British crown colony in the South Atlantic (aggregate area, 119 square miles; pop., 5,417 in 1960) comprises the island of St. Helena (area, 47 sq. mi.; pop., 4,707), and two widely separated island dependencies: Tristan da Cunha (38 sq. mi.; pop., 281), a small group of islands lying 1,500 miles southwest of St. Helena and including the uninhabited islands of Gough, Nightingale, and Inaccessible; and the island of Ascension (34 sq. mi.; pop., 429), which is 700 miles northwest of St. Helena. Jamestown (1955 pop., 1,568) is the capital and St. Helena's chief port.

The colony is administered by a governor (Sir John O. Field, appointed Feb. 27, 1962, to succeed Sir Robert E. Alford), who is assisted by an Executive Council of not more than 7 members, and by an Advisory Council of not more than 10 members. Government revenue in 1960 totaled £195,606; expenditure, £188,276.

The resettlement in England of the population of Tristan da Cunha following the eruption of the island's volcano in October 1961 proved unsuccessful, as homesickness and illness gripped the islanders. A small group of islanders returned to Tristan da Cunha in August 1962 to survey conditions and to repair damaged homes. It was announced on December 3 that the remaining islanders, who had been resettled at a former military base near Southampton, had voted to return to Tristan da Cunha.

St. Helena.—Cultivation of New Zealand flax is the principal industry on the island. In 1960, 823 tons of hemp and 399 tons of tow were produced. Manufactures include rope, twine, and lace. The important fish catch includes mackerel, albacore, tuna, and bonito. In 1961, exports were valued at £68,000; imports, £233,000. Trade is conducted mainly with Great Britain. All-weather roads total 65 miles.

Ascension.—This island is a barren, rocky peak, volcanic in origin, and destitute of vegetation except for about 10 acres on which vegetables and fruits are grown for the inhabitants of Georgetown, the only settlement. Ascension is the site of an important cable and wireless station, and lies near the terminus of the Atlantic range for rockets fired from Cape Canaveral, Fla.

Tristan da Cunha.—The island consists of a volcano rising 7,640 feet, which erupted in October 1961 and forced the population to flee the island. The island had a habitable area of 12 square miles, of which about 30 acres were cultivated. Fishing for crawfish was the principal industry.

SAINT LOUIS

With a population (1960 census) of 750,026, St. Louis, Mo., ranks 10th among cities of the United States and is the most populous city of the Mississippi River Valley. Covering an area of 61 square miles, it is the center of a standard metropolitan area (3,187 square miles) which includes three counties in Missouri and two in Illinois and has a total population of 2,060,103.

The city's mayor-council government is headed by Raymond R. Tucker (Democrat), serving a third four-year term as mayor. Democrats won all election contests in the city in 1962, but lost control of important offices in St. Louis County. The post of supervisor (chief executive) and a majority of the county council seats were won by Republicans.

Public school enrollment for 1962 reflects the different growth patterns in the city and in the county. County enrollment increased by 8,740 pupils to a total of 134,525, while the city total increased by only 4,736 to 109,899.

Steel production increased from 163,059 tons in September 1961 to 166,492 tons in September 1962, but employment showed a decrease from 842,700 to 827,100 during the same period. Unemployment, however, declined from 47,000 to 39,000.

Tangible results of the city's efforts to redevelop some of its blighted areas appeared in 1962. Some apartments were occupied in the Mill Creek area, and the major building program of St. Louis University was well under way in the same area. Significant progress was made during the year toward completion of the Jefferson National Expansion Memorial. The railroad tracks along the riverfront were relocated in a tunnel, and footings were completed for the 630-foot-high "Gateway to the West" arch.

City voters on March 6 authorized a $23,180,000 school construction program which is designed to ease overcrowded classroom conditions. The four-year program includes both new construction and the expansion of existing facilities, and provides also for fire safety improvements in all school buildings. The vote marked the first success in five school bond proposals over a two-year period.

At the same time, approval was given to six public improvement bond issues totaling $14,986,000. Chief of these is the expenditure of $6,000,000 for work around the site of the planned new athletic stadium.

New facilities for higher education were assured by voter approval of a junior college district including all of the city and county. First classes were scheduled for February 1963. A change of leadership at Washington University was marked by ceremonies on October 12 when Thomas H. Eliot was installed as chancellor.

A unified transit system for the metropolitan area was practically assured when a purchase

agreement was reached whereby the Bi-State Development Agency will buy the facilities of the St. Louis Public Service Company, the largest transit system in the area.

A major step toward ending pollution of the Mississippi River was taken on November 6 when voters overwhelmingly approved a $95 million bond issue for the construction of two sewage treatment plants.

Chairman, Department of Political Science, Washington University; Former Associate Director, Metropolitan St. Louis Survey.

SAINT LUCIA. See WEST INDIES FEDERATION.

SAINT PIERRE AND MIQUELON

Comprising the islands of St. Pierre and Miquelon, and a group of small islands, this French overseas territory is situated off the Grand Bank south of Newfoundland. The territory's total area is 93 square miles, and its population is 5,000 (1961 est.), composed mainly of Breton, Norman, and Basque descendants. The town of St. Pierre (est. pop., 3,400) is the capital and principal settlement. The territory is administered by a French-appointed administrator (Michel Maillard), who is assisted by a 14-member General Council elected by universal suffrage. The economy is based on fishing (mainly cod), and to a lesser extent on the raising of fur-bearing animals. Exports in 1961 totaled 609 million francs CFA; imports, 1,130 million (246.85 francs CFA equal U.S. $1). Imports come mainly from Canada and France; most exports go to the United States and France.

SALT

In 1961 the United States produced 25,707,000 short tons of common salt (sodium chloride), 27% of the world output. United States production was 25,481,000 short tons in 1960, the increase being largely the result of a rise in evaporated salt. The 1961 output was produced by 57 companies at 95 plants, and it included 4,387,000 tons of evaporated salt, 6,439,000 tons of rock salt, and 14,881,000 tons of salt in brine. Four leading companies, operating 22 plants, accounted for 48% of the national total.

Dry salt imports for consumption totaled 1,050,000 tons in 1961, compared with 1,057,000 tons in 1960, a slight decrease. Exports rose from 420,000 tons in 1960 to 642,000 tons in 1961, an increase of 55%. Most of the increase went to Japan and Canada. Apparent consumption declined from 26,118,000 tons in 1960 to 26,115,000 tons in 1961. Of the total consumption, 39% was used in making chlorine and caustic soda, an increase of 800,000 tons over that of 1960.

(See MINERAL PRODUCTION for table showing output of major countries.)

SALVADOR. See EL SALVADOR.

SALVATION ARMY

The Salvation Army in 1962 maintained operations in 86 countries and colonies and preached the Gospel in 140 languages. In its service in 1961 were 27,030 commissioned officers and cadets, 29,064 full-time employees, and several hundred thousand volunteer lay members. At its headquarters in London, England, Gen. Wilfred Kitching continued as international leader.

Among The Salvation Army's worldwide services are 133 hospitals, dispensaries, and clinics, treating 175,354 inpatients and 769,192 outpatients annually; 141 children's homes; 866 day schools, with 128,269 pupils; 216 residences for various age groups; 10 industrial homes for women; 89 homes for unwed mothers; 142 goodwill centers and slum posts; 216 shelters and workshops for men; 55 employment bureaus; 7 leprosaria; and 10 institutes for the blind.

The United States command of The Salvation Army continued in 1962 under Commissioner Norman S. Marshall. There are also four regional commissioners; (Eastern) Holland French, (Central) Samuel Hepburn, (Southern) William Davidson, and (Western) Glenn Ryan. The Salvation Army's 8,551 centers of operation in the United States, including 6,405 service extension units, are administered by 4,962 officers, assisted by 13,015 employees.

The Salvation Army's social institutions in the United States include 127 treatment centers aiding 65,563 men annually; 55 camps providing camping experience for 21,468 children and 3,948 adults, including senior citizens; 260 boys' and girls' clubs and community recreation centers, with 55,444 members; 54 Salvation Army–USO and Red Shield clubs for servicemen, with attendance of 2,700,388; and 15 Evangeline residences for young businesswomen. The Salvation Army also provided care and guidance for 8,227 unwed mothers in 34 homes and for 13,052 unwed mothers not in residence. It furnished care in general hospitals or related institutions for 17,252 patients, and clinic or outpatient care for 35,711 patients.

Other services include missing persons bureaus, employment bureaus, emergency disaster services, day nurseries and settlements, care and treatment of alcoholics, programs for the aged, and aid for immigrants.

The Salvation Army United States delegation of five, headed by Col. Jane Wrieden, national consultant for women's and children's services, joined 20 other worldwide Salvation Army delegates at the 11th International Conference of Social Work in Rio de Janeiro, Brazil, in August 1962. Colonel Wrieden served for the second time as secretary to the entire United States delegation from all agencies in attendance at the conference.

JOHN GRACE,
National Chief Secretary, The Salvation Army.

SAMOA. See AMERICAN SAMOA; WESTERN SAMOA.

SAN FRANCISCO

San Francisco, the second largest city in California and the 12th largest in the nation, had a population in 1960 of 740,316, a decline of 4.5% since 1950. During the same period, however, the population of the metropolitan area—of which it is the business, financial, and cultural center—increased by 24.2%, to 2,783,359.

The present city charter provides for a consolidated city and county government headed by a mayor (in 1962, George Christopher, whose second four-year term ends in November 1963) and an 11-man Board of Supervisors. For the 1962–63 fiscal year the city budget was fixed at $322,789,546, an increase of $45,643,103. Of this sum, the property tax (the rate of which was raised from $8.31 to $9.39 per $100 assessed valuation) was expected to provide $141,028,573. A new source of revenue is a 3% tax on hotel rooms, which went into effect on July 1, 1961. During the first year it yielded $1,144,029.

New construction valued at $162.6 million was under way on June 30, 1962, an increase of 16.2% over that in mid-1961. Major projects include the $32.5 million Federal

Office Building and the 1,200-room Hilton Hotel; both were to be completed in 1963. The number of building permits issued in the first six months of the year was up 1.4% over the same period in 1961, and the number of dwelling units increased 59.6%.

In the hotly contested election of Nov. 6, 1962, San Francisco followed the statewide trend. In the race for governor, the incumbent, Edmund G. Brown, Democrat, polled 180,298 votes in the city to 107,165 for Richard M. Nixon. Mayor Christopher, unsuccessful candidate for lieutenant governor on the Republican ticket, was outpolled in the city (147,859 to 134,272) by the Democratic candidate, incumbent Glenn M. Anderson.

The two San Francisco congressmen, William S. Mailliard (Republican) and John S. Shelley (Democrat) were reelected by substantial majorities, as were the incumbent candidates for assessor and public defender. The $793 million bond issue of the Bay Area Rapid Transit District, made up of San Francisco, Alameda, and Contra Costa counties, was approved by a narrow margin; a 60% favorable vote was required for the measure to carry. The San Francisco vote was 163,559 for and 80,967 against. This ambitious project, which will include the building of a tube beneath the bay and 75 miles of high-speed electric railway, is expected to go into partial operation in 1966 and to be completed by 1971.

Continued progress was made on two large-scale redevelopment projects: the rebuilding of 40 acres of outmoded residences in the "Western Addition," and the conversion of the former wholesale produce district into a complex of tall office and apartment buildings and landscaped open spaces. Other urban renewal projects in the planning stages included the rebuilding of the blighted area south of Market Street and the rehabilitation of Market Street itself, which in recent years has deteriorated badly.

Josef Krips was named permanent conductor of the San Francisco Symphony Orchestra, replacing Enrique Jordá. Krips had held a similar post in Buffalo, N.Y.

Fire on September 7 razed the 71-year-old St. Mary's Roman Catholic Cathedral. The edifice had survived the 1906 earthquake and fire.

On June 11, three convicted bank robbers escaped from the federal penitentiary at Alcatraz, but were presumed to have drowned in San Francisco Bay. Late in December it was announced that the Alcatraz penitentiary would be closed by July 1963.

In sports, the San Francisco Giants defeated the Los Angeles Dodgers in a playoff for the National League pennant, but then lost to the New York Yankees in an exciting World Series, 4 games to 3. The franchise of the Philadelphia Warriors in the National Basketball Association was transferred here for the start of the 1962–63 season.

Oscar Lewis,
Co-editor of "A History of San Francisco"; Author of "The Big Four" and other books.

SAN MARINO

The smallest republic in the world, San Marino is situated 140 miles north of Rome in the Apennine Mountains of Italy. It has an area of 23 square miles, and a population (1961 est.) of 17,000. The town of San Marino (pop., 2,481) is the capital. The population speaks Italian and is mainly Roman Catholic. Italian and Vatican City currencies are in general use, but San Marino issues its own stamps and coins. A 60-member Grand Council, elected every five years by universal suffrage, is the principal governmental body. In the elections of Sept. 12, 1959, the Christian Democrats won 27 seats; Democratic Socialists, 9; left-wing Socialists, 8; and Communists, 16. The council appoints two regents as chief administrators for 6-month periods. Wine, woolen goods, hides, and quarry stone are exported. Tourism is an important source of income.

SANITARY ENGINEERING

The foreseeable landing of astronauts on the moon has raised questions about the possible contamination of the lunar environment. In correlative fashion, a subject for discussion in 1962 at an international conference on Medicine and Public Health in High Latitudes was the need for protecting existing resources surrounding the poles of the earth itself. Convened by the World Health Organization, the conference considered the provision and protection of water supplies; the safe and sanitary disposal of liquid and solid waste matters; physical and mental discomfort caused by armies of biting insects in the lands straddling the Arctic Circle; and high rates of accidents within the native and immigrant populations.[1]

Settlement of northern lands and exploration of the polar antipodes are in keeping with the mounting need for space onto which the growing population of the earth eventually can spill. Unfortunately, not only temperatures but also rates of precipitation become lower toward the poles. The stored masses of frozen water, although large, are not a quickly renewable asset; hence, they must be kept clean.

Development of Community Water Supplies.—In other directions, too, 1962 was a year for international councils on sanitary engineering matters. Noteworthy was a meeting in Washington, D.C., of the Inter-American Association of Sanitary Engineers, representing the American republics, on the general purport of the engineering control of man's environment. An important theme for discussion and information was the worldwide plan for providing organized communities with acceptable water supplies. The International Bank for Reconstruction and Development, the Inter-American Development Bank, and the Special Fund of the United Nations all have a part in this program for community water supply, and the World Health Organization is furnishing some of the required technical personnel and educational leadership.

Desalination of Water.—The Office of Saline Water of the U.S. Department of the Interior continued to administer a program of research and development for the production of cheap freshwater from the sea or from inland brackish sources. A desalination research conference[2] concluded that practical methods of desalting seawater might yet spring from basic research; that existing methods employ rapid but thermodynamically quite inefficient semipermeable membranes or interfaces between phases (liquid-vapor, liquid-solid, or liquid-liquid); and that fundamental information was needed on the structures of liquids and solutions, their thermodynamic properties, the passage of both matter and energy across phase boundaries, and the properties of membranes, including the membranes of living organisms.

Water Pollution Research.—At the level of scientific and technological research, a first International

Apparatus for removing strontium-90 from milk is shown by Dr. Harry Gregor at Polytechnic Institute of Brooklyn.

THE NEW YORK TIMES

Conference on Water Pollution Research was convened in London. It called attention to the mounting competition for water, the necessity for protecting existing resources, and the research in which engineers, chemists, and biologists must engage if we are to solve the pollution problems created by the modern revolution in science and technology.[3]

Synthetic Detergents.—Synthetic detergents now compose about 75% of the entire soap and detergent industry in the United States, and about 90% of the annual volume of products of this kind used in American households.[4] Most of the synthetic cleaners are members of a family of petrochemical compounds commonly referred to as alkylbenzenesulfonates (or ABS) and prepared by linking molecules of propylene gas to form chains of about 12 carbon and associated hydrogen atoms. Structurally, the chains are branched rather than straight, and it has been shown that this is responsible for the failure of ABS to be biologically degradable. Consequently, ABS remains intact and manifests itself as foam over long stretches of natural bodies of water into which raw or treated water-carried wastes are discharged.

Natural surface waters loaded heavily with such waste waters become unsightly, and their value to household and industry is depressed. Groundwaters, too, may retain foaming residuals of ABS that come from leaching devices in household sewage disposal, for example. There has been much dissatisfaction with this situation, and the German Federal Republic has become the first government to prohibit (by 1964) the use of nondegradable synthetic detergents. Since development of a reasonably satisfactory degradable petrochemical detergent has been reported, the ban is not expected to be deferred beyond that date.

Epidemiology of Air Pollution.—Published in 1962 was a report,[5] issuing from a symposium of the World Health Organization, on the epidemiology of air pollution. The report points out that, although air pollution has been described as one of the worst environmental evils to which industrial populations are exposed, it has been almost impossible to provide epidemiological evidence of its true dangers by available air-sampling techniques. Widespread damage has, on occasion, become manifest within 24–48 hours of the onset of serious pollution by stagnation of the atmosphere. It is estimated, for example, that during the great London fog of December 1952 approximately 4,000 deaths were caused by high levels of air pollution. However, effects of this kind have been evident mostly in persons afflicted with circulatory or respiratory diseases, and most deaths in the London episode occurred among medically handicapped elderly people.

Effects deferred in time and chronic or long-term effects still remain to be identified with an adequate degree of certainty. In Britain, postmen living where there was much thick polluted fog showed a higher incidence of bronchitis than a control group of postmen living in relatively clear areas. In the general literature of air pollution, this is a particularly significant study, because postmen are drawn from a relatively homogeneous class. All too often, economic factors oppose great obstacles to comparisons of the response of people to differing environmental hazards.

Not fully resolved remains the relative effect of atmospheric pollution and cigarette smoking in the production of lung cancer. The responsible benzpyrene and related polycyclic hydrocarbons are reported to play a dual role by virtue of their presence in both cigarette smoke and polluted air. Although particulates are widely measured by control agencies, their health significance in the pollution of the atmosphere above cities and towns remains to be fully established.

Radioactive Fallout.—Again in 1962 the resumption of tests of nuclear weapons in the atmosphere increased the radioactivity of the environment. Fallout radiation appeared in water supplies and in milk and other foodstuffs in varying degree. However, responsible authorities did not consider the increased intake of radioactive iodine in milk and of other radionuclides in water and solid foodstuffs sufficiently great to propose countermeasures. (See also ATOMIC ENERGY; PUBLIC HEALTH.)

SASKATCHEWAN

Central of the three prairie provinces of Canada, Saskatchewan extends over 251,700 square miles, including 13,727 square miles of lakes. The estimated population on June 1, 1962 totaled 930,000 (925,181 in the 1961 census). The largest cities (1961 census) are: Regina, the capital, 110,281; Saskatoon, 92,367; Moose Jaw, 33,065; and Prince Albert, 23,559.

Government.—The crown is represented by the lieutenant-governor, Frank L. Bastedo. The Executive Council (cabinet), drawn from the majority party in the unicameral legislature, is headed by Premier Woodrow S. Lloyd. Elected for a maximum term of five years, the Legislative Assembly is subject to dissolution on advice of the cabinet. The Co-operative Commonwealth Federation (CCF) party has been in office since 1944, and in the current legislature, elected in 1960, holds 34 seats, while the official Liberal opposition as of the end of 1962 had 21. The province is represented by 16 Progressive Conservative members and one Liberal member in the federal House of Commons, and has six seats in the Senate.

Finance.—Estimated budgetary revenues for the fiscal year ending March 31, 1963, were $171,826,040; and expenditures, $174,218,190. The net debt of the province was $19,492,000 on March 31, 1961.

Education.—During the 1960–61 school year there were 165,476 pupils in elementary schools, 47,643 in

secondary schools, 3,873 in private schools, and 4,351 in the government correspondence school. The University of Saskatchewan had 5,103 full-time degree students, while the two teachers colleges graduated 917.

Transportation and Communications.—There are 120,000 miles of municipal and provincial roads, 36,000 miles of which are surfaced, including 2,600 miles of bituminous and oil-treated surface. Railway mileage in the province is 8,700. On Dec. 31, 1961, there were 344,527 licensed motor vehicles. The major cities are served by national airways, while the provincial government operates an air service to the north and an air ambulance. There were 244,388 telephones, 14 radio stations, and 6 television stations in service at the end of 1961.

Agriculture.—Cash farm income in 1961 was estimated at $621,000,000, the major items being: wheat, $365,000,000; oats, $6,800,000; barley, $20,800,000; flax, $22,000,000; cattle, $107,735,000; dairy products, $30,434,000; poultry and eggs, $17,200,000; and hogs, $28,100,000. The preliminary estimate of grain production for 1962 was (in millions of bushels): wheat, 337; oats, 104; barley, 46; rye, 5; and flax, 5.6.

Minerals.—Preliminary figures for 1961 indicate that the value of mineral production was $218,201,000. Values of the chief minerals were: uranium, $44,600,000; copper, $19,800,000; zinc, $7,400,000; gold, $2,618,900; coal, $5,100,000; sodium sulfate, $4,000,000; salt, $1,600,000; structural materials (cement, clay, sand, gravel), $11,300,000; oil, $116,800,000; and natural gas, $2,500,000.

Other Production.—Net commodity production in 1961 totaled $723 million, including agriculture ($181 million), construction ($205 million), mining ($167 million), manufactures ($125 million), and forest and fisheries ($7 million). Personal income in 1961 totaled approximately $1,120 million.

Events, 1962.—Favorable weather conditions resulted in grain production more than double that of 1961. Production of the chief minerals remained constant, with the major new developments being the commencement of potash mining in the Esterhazy field, and the announcement of a plant to process helium from proved reserves in southwestern Saskatchewan. Among new commercial ventures was a plant opened at Watrous to harvest brine shrimp. Increased tourist traffic was reported, particularly to northern lakes, and the government stocked fish in 38 lakes and dams and nine angling waters.

The Medical Care Plan for universal compulsory prepaid medical insurance, established under the Saskatchewan Medical Care Insurance Act of 1961, was the dominant public issue throughout the year. Although vigorously opposed by the Saskatchewan College of Physicians and Surgeons, the government proceeded to put the plan into effect on July 1. Thereupon the medical profession withdrew normal services, doctors closing their offices but maintaining a hospital-based emergency service. The government position—that this was an act democratically passed by the legislature in response to a mandate received from the people—was endorsed by agricultural and labor organizations. At the same time numerous "Keep our Doctors" committees sprang up, vigorously supporting the stand of the profession. In the emergency period a number of doctors left the province, while the government imported some 100, principally from the United Kingdom, and several community clinics were organized to employ doctors willing to practice under the plan.

On July 24 the doctors returned to normal practice when, aided by Lord Taylor, a British consultant brought in by the premier, the government and the college agreed to a modified plan. This plan was given effect by amendments to the act passed at a special session of the legislature on August 2. The revised act preserved the principles of universal coverage and administration by a commission responsible to the government. At the same time it met the objective of the doctors by specifying safeguards for professional freedom, allowing doctors to practice outside the plan, and providing for the continued operation of existing doctor-sponsored voluntary insurance schemes.

The former minister of public health, J. Walter Erb, who had introduced the original bill and had been transferred to another department, resigned over the government's handling of the issue, and subsequently joined the Liberal opposition.

WIDE WORLD

Residents of Saskatchewan picket the Legislative Building in Regina, July 11, demanding repeal of government medical care insurance plan, which led to strike of physicians.

SAUDI ARABIA

This kingdom comprises the major portion of the Arabian Peninsula and is bordered on the north by Jordan, Iraq, and Kuwait; on the east by the Persian Gulf, Qatar, the Trucial States, and Muscat and Oman; on the south by Aden Protectorate, and Yemen; and on the west by the Red Sea. The international boundaries of Saudi Arabia have not been fully delimited. The area of the country has been estimated at 621,626 square miles.

Population.—It is estimated that Saudi Arabia has 6.15 million inhabitants, divided among the four provinces as follows: Hejaz, 1,250,000; Asir, 900,000; Nejd, 1,500,000; and al-Hasa, 2,500,000. Between 60% and 85% of the population is seminomadic or nomadic (Bedouin). Jidda (est. pop., 250,000), on the Red Sea, is the principal commercial and marketing center. Mecca (125,000) is the most holy of Muslim cities and one of the two official capitals of Saudi Arabia; the other capital is Riyadh (200,000), the main residence of the ruling Saud family and the location of most of the ministries of the government. Other important cities are Ras Tanura, Dammam, Dhahran, Abqaiq, al-Khobar, and Hofuf, all on the eastern coast; and the interior towns of al-Taif, al-Kharj, Hail, Anaiza, Medina (the second most holy city of Islam), and Buraida.

Government.—Saudi Arabia is an absolute monarchy under the control of the Saud family, headed by King Saud ibn Abd al-Aziz ibn Abd al-Rahman al-Faisal Al Saud (b. 1901; acceded 1953). Although the realm has been unified since 1932, the former kingdoms of Hejaz and Nejd are still administered separately by viceroys. The king is advised by a cabinet or Council of Ministers, which has both legislative and executive powers, but whose actions may be vetoed by the king. The heir to the throne is the king's brother, Crown Prince Faisal ibn Abd al-Aziz ibn Saud, who was again appointed prime minister in 1962 (see below, *Events, 1962*). Much of the local administration is in the hands of tribal sheikhs, who wield considerable power. Justice is administered according to Islamic law by religious courts.

Religion and Education.—With the exception of al-Hasa, where the Shi'ites are numerous, most of the inhabitants follow the Sunni sect of Islam, adhering to the Hanbalite juridical practices and being strongly influenced by the puritanical Wahhabi reform movement of the 18th century. The Wahhabis are the keepers of the holy places and control the pilgrimage to Mecca and Medina, in which more than 200,000 Muslims participate annually.

Primary education is free, but only the large towns have schools. There are about 150,000 primary school pupils and a considerable number in secondary, teacher-training, and technical schools. For the fiscal year 1963, a large share of the educational budget was allocated for the

On a brief visit to Washington, King Saud of Saudi Arabia is met by President Kennedy at White House on February 13.

expansion of vocational and industrial educational programs. In 1960 the King Saud University was opened at Riyadh, and the Islamic Sharia College at Medina.

Finance.—The budget for the fiscal year 1962 was balanced at 2,007 million silver riyals (4.5 silver riyals equal U.S.$1), including a surplus of 66 million riyals to be used for debt retirement. It is expected that the entire Saudi public debt will be discharged by the end of 1963. Some 248.2 million riyals were allocated to the private treasury of the royal family, and 400 million riyals were expended on new development projects. Other large amounts were spent for defense, civil aviation, education, health, and public works. About 88% of revenue comes from oil royalties and income tax on oil operations. The finances of the country in 1962 were much improved over conditions in 1958. In November 1961 the gold holdings of the Saudi Arabian Monetary Agency totaled 721.7 million riyals, which entirely covered its note issue, and the banking department of the agency held 429.5 million riyals in gold, silver, and foreign exchange, against government deposits of 441.2 million riyals.

Transportation and Communications.—Jidda, on the west coast, and Dammam and al-Khobar, on the east coast, are the main ports; Ras Tanura handles nearly all petroleum exports. Other petroleum exports go through a pipeline operated by the Trans-Arabian Pipe Line Company (TAPLINE) from Qaisumah to Sidon in Lebanon. No railroads operate in the west, but work proceeded on the repair and rebuilding of the 525-mile Hejaz Railroad, connecting Medina to Maan in Jordan. An agreement was signed in Amman on July 28, 1962, to share construction costs equally among Saudi Arabia, Jordan, and Syria. In the east, a 357-mile line connects Riyadh and Dammam.

In the west three hard-surfaced highways connect Jidda with Mecca and Medina, and the latter with the new port of Yenbo'. Other roads under construction connect Mecca with al-Taif and Riyadh, and Medina with Tabuk on the Gulf of 'Aqaba. In the east, hard roads join all major centers of al-Hasa. New road projects aggregating 800 miles were approved in 1961.

Trans-World Airlines and five other international airlines use Dhahran Airport, and Jidda is served by foreign lines. Saudi Arabian Airlines serves Riyadh and other towns with flights to most Middle Eastern states. There are radio stations and telephone exchanges in all cities, two daily newspapers, and in Riyadh there is a television station serving more than 6,500 television sets.

Agriculture.—Saudi Arabia is essentially a subsistence agricultural and pastoral country. Due to lack of water, less than 15% of the land is arable and only about 500,000 acres are cultivated. To increase agricultural land, 10,000 acres of swamp are being drained at Qatif. About 500,000 tons of dates are produced annually, but imports of dates from Iraq are required to meet the local demand. The oasis of Hofuf (25,000 acres) and the al-Kharj irrigation project (5,000 acres) produce fine vegetables, dates, and rice. An artesian well with a flow of 440,000 gallons of water per hour was found in 1961, and in 1962 there was more drilling for water than for oil. Dams have been completed at Medina, Riyadh, and al-Taif.

Petroleum Resources.—The Arabian American Oil Company (ARAMCO) holds concessions (granted in 1933 and 1939, and extending until 1993) for about 365,000 square miles, covering most of the eastern half of the country, all offshore areas, and a large area to the west of the main concession. In the first quarter of 1962 the company's crude oil output averaged 1,534,405 barrels per day (up 3.4% from the same period in 1961), of which about 20% was pumped by TAPLINE to Lebanon, 12% went to Bahrain through an underwater pipeline, 20% was refined at Ras Tanura, and the balance was shipped by tanker from Ras Tanura. Saudi Arabia has estimated proved oil reserves of over 50 billion barrels.

The Paul Getty Oil Company holds the concession for Saudi Arabia's share of the Neutral Zone, and pays royalties of $0.55 per barrel and 25% of net profits from the sale of crude oil. Neutral Zone offshore rights are owned by the Arabian Oil Company, Ltd., a Japanese firm which began to export oil from Saudi Arabia in 1961.

ARAMCO participates in Saudi Arabian economic and industrial development in many ways. It financed a water and sewage project in the Dammam-al-Khobar area; assisted the Dhahran Electric Supply Company, which owns a natural-gas power plant; and trains many Saudis in local technical-training schools and in colleges abroad. In 1962 one of the daily work shifts in AMARCO's refinery at Ras Tanura consisted of an all-Saudi crew.

Events, 1962.—Following his return from medical treatment in the United States and two conferences with President Kennedy, King Saud announced in March 1962 the formation of a new 14-man Council of Ministers. He retained the position of prime minister but named Crown Prince Faisal as deputy prime minister and foreign minister, and appointed other members of his family to important cabinet posts. The new officials included his son, Prince Muhammad ibn Saud, who became minister of national defense, and a commoner, Ahmad Zaki Yamani, who was named minister of petroleum and mineral resources. The considerable reorganization of the government signaled the return to a strong government; and the dropping of Sheikh Abdallah Turaiki, the independent petroleum minister, was regarded as a move to placate the oil interests. A further move to strengthen the government was made in September 1962 after the civil war in Yemen (q.v.) had embroiled Saudi Arabia and the United Arab Republic (UAR) as rivals there. Prince Faisal on October 17 was named prime minister, and he took over full responsibility for the administration.

Early in the year Prince Faisal said that he would "fight to the finish" in case of a conflict between Saudi Arabia and the UAR. Another indication of the deep rift between the Saudis and UAR President Nasser was the rejection by Saudi Arabia in May 1962 of the annual offering of a gold-embroidered covering for the holy Kaaba in Mecca, a privilege Egypt had enjoyed for centuries. King Saud later offered to fly the Egyptian pilgrims at his own expense as a gesture of goodwill, but the offer was rejected by the UAR.

In August 1962, Prince Talal, another brother of King Saud, left the country and spoke out in Beirut against Saud's government. He called for a constitutional regime having limited democracy. The breach between Prince Talal and his brother became complete when his property was confiscated. Three of his brothers joined him in exile, along with several other members of the royal family.

In 1962, steps were taken to merge Saudi armed forces with those of Jordan. The forces of both nations cooperated on the Saudi-Yemeni frontier in assisting the Yemeni royal family in trying to overthrow the republican regime.

SYDNEY N. FISHER,
Professor of History,
The Ohio State University.

SAVINGS

Liquid savings of individuals in the United States totaled approximately $258 billion at the beginning of 1962. During 1961 these savings, which include currency, checking and savings accounts, and United States government securities, increased by more than $17 billion. This was the largest gain in many years and brought the total increase in holdings over the past five years to more than $50 billion. Saving in these liquid forms appears to have continued at a record peacetime rate in the first three quarters of 1962.

ESTIMATED LIQUID ASSET HOLDINGS OF INDIVIDUALS IN THE UNITED STATES
(In billions of dollars, end of years shown)

Assets	1959	1960	1961[1]
Currency	22.0	22.0	22.2
Demand deposits	37.0	37.2	39.0
Time deposits	90.2	94.5	102.3
Savings and loan shares	48.9	55.4	63.2
U.S. government securities	32.8	31.5	31.4
Total[2]	230.9	240.6	258.1

[1] Preliminary. [2] Includes the holdings of farmers and professional persons, but not trust funds administered by corporate trustees. (Sources: Federal Reserve Board and Securities and Exchange Commission; data adjusted for differences in coverage.)

Growth in savings accounts (including shares in savings and loan associations) accounted for nearly all of the increase in total liquid assets, as is shown in the accompanying table. Savings accounts amounted to $165.5 billion at the end of 1961, a gain of nearly $16 billion during the year. Demand deposits and currency, forms of liquid assets which earn no interest, rose only moderately. The increase, amounting to $2 billion, brought total holdings of these assets to $61.2 billion. Individuals reduced their holdings of United States government securities only slightly in 1961, compared with the significant reduction in 1960.

IRVING SCHWEIGER,
Professor of Marketing,
University of Chicago.

SCHELL, Maximilian

Swiss actor: b. Vienna, Austria, Dec. 8, 1930.

For his performance as the German defense lawyer in *Judgment at Nuremberg*, the New York Film Critics Circle and the Academy of Motion Picture Arts and Sciences named Maximilian Schell

Maximilian Schell won a 1962 Academy Award for his performance in *Judgment at Nuremberg*.

UNITED ARTISTS

best film actor of 1961. He received his Academy Award "Oscar" on April 9, 1962, four years after his American screen debut as the Nazi lieutenant in *The Young Lions*.

The son of a poet-playwright father and actress mother, Maximilian Schell has a brother and two sisters (one of them is Maria Schell) who are also actors. In 1938 the family fled to Zurich, where they became Swiss citizens. While studying philosophy and art history at the universities of Zurich and Munich, Schell earned money as a professional athlete; at the same time he was appearing in university and professional dramatic productions, and later he spent four years acting in European theaters (he speaks four languages). His first film was the German *Kinder, Mütter, und ein General* (*Children, Mothers, and a General*). In 1958 he played the romantic lead in Ira Levin's *Interlock* on Broadway, receiving good notices although the play ran only 4 performances.

Rather than accept motion pictures parts that he disliked, Schell turned to television and was twice nominated for an Academy of Television Arts and Sciences "Emmy" award for single appearances in 1959; one of these roles was the defense lawyer in Abby Mann's original production of *Judgment at Nuremberg*. Since making the screen version of the play, he has portrayed the German tutor in the film *Five Finger Exercise* (1962) and St. Joseph of Cupertino in *The Reluctant Saint* (1962).

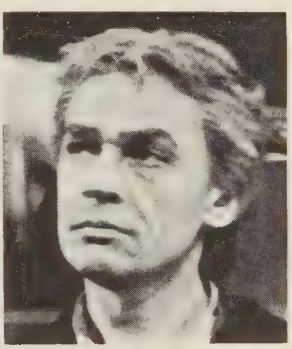
SCOFIELD, (David) Paul

English actor: b. Hurstpierpoint, Sussex, England, Jan. 21, 1922.

"Not content just to applaud, much of the audience stands and noisily shouts its appreciation for his movingly perfect performance," reported *Time* (Dec. 15, 1961) of Paul Scofield in Robert



Paul Scofield, who appeared in *A Man for All Seasons*, was given an Antoinette Perry Award for the 1961–62 New York drama season.

BARRY HYAMS

Bolt's *A Man for All Seasons*. Awarded an Antoinette Perry "Tony" as best starring dramatic actor of 1961–62 for his portrayal of Sir Thomas More in the Bolt play, he has been ranked by some critics with Sir Laurence Olivier and Sir John Gielgud.

Scofield studied dramatics at the Croydon Repertory Theatre and London Mask Theatre schools. After playing with student repertory and armed services entertainment companies during World War II, he joined Basil C. Langton's Travelling Repertory Theatre (1942) and Sir Barry Jackson's Birmingham Repertory Company (1944). By 1946, when he became a member of the Festival Company at the Shakespeare Memorial Theatre in Stratford-on-Avon, he had played some 20 roles under Sir Barry's direction.

Successes in such Shakespearean parts as Don Armado (*Love's Labour's Lost*), Mercutio (*Romeo and Juliet*), and Sir Andrew Aguecheek (*Twelfth Night*) won Scofield his first London starring roles, Alexander the Great in Terence Rattigan's *Adventure Story* (1949) and Konstantin in Chekhov's *The Seagull* (1949). In 1950 he opened in the Fry-Anouilh *Ring Around the Moon*, playing the twin brothers in a production that ran two years in London. Thereafter he appeared in numerous

classical and contemporary works, including a long-run *Hamlet* in 1955–56 and a musical, *Expresso Bongo* (1958). His first screen role was Philip II of Spain in *That Lady* (1955).

Between the London and New York engagements of *A Man for All Seasons,* in 1961, he received rave notices for his Coriolanus and Don Armado at the Stratford (Ontario) Shakespeare Festival. Following his triumphant New York debut as Sir Thomas More, he returned to England in 1962 to play King Lear in Peter Brook's much-admired Stratford production.

SCOTLAND

Comprising 33 counties and 194 burghs in the northern part of the island of Great Britain, Scotland has an area of 30,411 square miles, and a population (1961 preliminary census) of 5,178,490. The principal cities (with 1961 census populations) are Glasgow, 1,054,913; Edinburgh, the capital, 468,378; Aberdeen, 185,379; and Dundee, 182,959. Important island groups lying off Scotland are the Orkney Islands (area, 375.5 sq. mi.; 1961 pop., 18,743); the Shetland Islands of Zetland (551 sq. mi.; 1961 pop., 17,809); and the Hebrides or Western Islands (2,812 sq. mi.; 1951 est. pop., 53,000).

Scotland is represented by 16 peers in the House of Lords and by 71 members in the House of Commons. The chief member in the British cabinet responsible for Scottish affairs is the secretary of state for Scotland (in 1962, John Scott Maclay). There are also several special administrative bodies for Scottish affairs.

In 1960–61 there were 2,845 primary schools (with 582,387 pupils), 771 secondary schools (271,847 students), and 1,119 other centers of education (245,524 students). University enrollment totaled 19,414 in 1961–62 (St. Andrews, 2,739; Glasgow, 6,885; Aberdeen, 2,417; and Edinburgh, 7,373).

Arable land in 1961 totaled 3,428,000 acres, of which 1,893,170 acres were allocated to clover and rotation grasses; 1,050,860 to corn crops; and 460,010 to green crops. In 1961 the fish catch (excluding salmon and sea trout) was 240,579 tons, valued at £13.5 million. Principal industries are shipbuilding, steel manufacturing, and coal mining.

Reversing its 1959 decision, the Church of Scotland entered into talks with the Church of England in Durham on July 10–12, 1962. A permanent standing committee of the two churches, together with the Presbyterian Church of England and the Episcopal Church of Scotland, was established to study further possible Anglican-Presbyterian unity.

The first official visit of a foreign head of state to Scotland took place on Oct. 16–19, 1962, when King Olav V of Norway visited Scotland.

SECRET SERVICE, U.S.

An investigative bureau of the Treasury Department, the Secret Service was established July 5, 1865. Protection of the president, members of his immediate family, and the vice president continues to be the paramount responsibility of the service.

Counterfeiting of the currency of the United States reached the highest peak in the history of the service in the fiscal year ending June 30, 1962. During that year 737 persons were arrested for counterfeiting offenses, and 31 plants for the manufacture of counterfeit money were captured. A total of $4,114,323.35 in counterfeit money appeared, of which amount $3,565,567 was seized from counterfeiters before it could be passed upon the public. The loss to the public was held to $548,756.35. Seven out of every eight counterfeit notes manufactured were seized before they could be successfully passed on the public. The largest domestic seizure of counterfeit money ever made—over $1 million—was accomplished in New York City on Feb. 8, 1962.

Investigation of 40,351 forged endorsements of government checks involving $4,244,133.16 was completed during the year ending June 30, 1962, and 3,414 persons were arrested for this offense. The forgery of government savings bonds dropped slightly; 7,894 forged bond cases involving a value of $758,781.54 were completed, and 82 persons were arrested.

Arrests for other offenses brought the total of arrests made by the service to 4,402. There were 3,444 convictions, representing 98.3 percent of all convictions in all cases prosecuted.

SEISMOLOGY

The outstanding seismic event of 1962 was undoubtedly the Iranian earthquake of September 1, at 10:50 P.M. Iranian time. It was not an unusually large quake, being only of magnitude 7 to 7.5 on the Richter scale, and hence much smaller (though more disastrous) than the San Francisco earthquake of 1906 (magnitude 8.3).[1] Despite its small magnitude, the Iranian quake caused about 12,400 deaths and destroyed 294 villages. The quake's center was southwest of Teheran and about 13 miles below the earth's surface. Most of the destruction occurred within a 150-mile-sided equilateral triangle with apexes at Kazvin in the north, Hamadan in the west, and Saveh in the east.

Next in importance to the Iranian quake was the earthquake of July 30 in central and western Colombia. This was only of magnitude 6.5, but 40 persons were killed and property damage occurred over an area of 400,000 square miles.

The Mediterranean area was shaken by half a dozen damaging quakes. Southern Italy was hardest hit on August 21, when 17 persons were killed and extensive property damage was done around Naples. Makarska, a village in Yugoslavia, had been jolted earlier, when two persons were killed on January 7 and two more on January 11. Severe damage was done in the first quake, and the village was almost completely destroyed in the second. On June 11 considerable earthquake damage again occurred in Yugoslavia, mostly in Sarajevo. On August 28 the whole rim of the Mediterranean was shaken, one person being killed in Corinth,

[1] While the Richter scale to express earthquake magnitude is popularly called a scale from 0 to 10, technically this is incorrect, since the scale has no upper limit. Since the largest quakes ever recorded, however, have reached only 8.9 (Ecuador-Peru in 1906 and Japan in 1933), it is unlikely that a quake of magnitude 10 will ever occur, so 10 is given as an upper limit. Since the scale is logarithmic, such a quake would have a magnitude more than 10 times greater than the largest recorded quakes—an unlikely eventuality.

Woman walks through the rubble of a village in Iran after the country's worst earthquake, September 1, destroyed nearly 300 villages and killed over 12,000 persons.

PARIS MATCH

Greece, and moderate property damage occurring in southern Italy, Sicily, Crete, Malta, and Yugoslavia.

The only other area to be visited by earthquake fatalities was Mexico. On May 11, three were killed and extensive property damage caused by the quake and resulting seismic sea wave in Acapulco. Again on May 19, three were killed and much property was damaged. Both earthquakes were of magnitude 7.25.

Seismological Research.—A great step toward lessening the damage done by earthquakes was made by the United Nations Educational, Scientific and Cultural Organization (UNESCO). A team of expert seismologists, including Americans, Russians, Frenchmen, Japanese, and Australians, was sent to the South American, Mediterranean, and Pacific areas where damaging earthquakes occur. There they inspected the terrain for earthquake sites, met with local seismologists, and held seminars. They submitted reports on each area, indicating safe building codes and other factors to lessen earthquake damage. If their suggestions are carried out, such loss of life as occurred in the Agadir, Morocco, earthquakes of 1960 and the Iranian quake of 1962 will be considerably reduced.

Nuclear Test Detection.—Improvement in the detection of nuclear tests by seismic means claimed the attention of most other available seismologists. During the year, on at least a dozen occasions, an epicenter (the center of a quake) was located at Novaya Zemlya, at approximately latitude 74°N. and longitude 52°E. Since no natural earthquakes have been known to occur in this area, but a Soviet testing site is located there, the events so recorded are assumed to have been nuclear blasts. Seismic instrumentation has improved to such an extent that even comparatively small Russian nuclear blasts are detected and located.

One of the problems in the detection of nuclear explosions is getting away from such background vibrations as those caused by traffic. The waves from a blast that are most useful in pinpointing its location are the short-period waves, known as P (compression) and S (shear) waves. Enough energy is transmitted in these waves to carry great distances, but at the recording station they may be masked by local vibrations of about the same period. It has been suggested that this difficulty could be overcome by burying the seismograph pickup deeper than usual for earthquake recording. This would put the pickup further away from the sources of local disturbances and hence out of their reach, but still within reach of the somewhat deeper vibrations from a distant blast. Experiments have been carried out at various depths, and an optimum depth of about 500 feet has been established. This is not a prohibitive depth, and with the combined information from these short-period P and S waves and that from the longer surface waves, which are not affected by local vibrations, even small nuclear blasts can now be detected at great distances.

(See also Coast and Geodetic Survey; Geology.)

J. Joseph Lynch, S.J.,
Director, Fordham Seismic Observatory.

SELECTIVE SERVICE

Men are registered by the Selective Service at age 18, classified as to availability for military service, and selected to fill calls issued by the Department of Defense. Temporary deferments are provided for persons engaged in study or other civilian activities vital to the nation; in cases where induction would result in extreme hardship to dependents; and for apprentices, agricultural occupations, and satisfactory participation in the reserves and National Guard. Exemptions are provided for ministers and divinity students, some aliens, and sole surviving sons.

Men who fail to qualify for military service under current standards also are deferred. Those disqualified for any military service are placed in Class IV-F. Those qualified only in war or emergency are placed in a new Class I-Y, established by Executive Order in January 1962. The executive order also amended Selective Service regulations to provide for the priority induction of men who enlist in the Ready Reserve up to age 26 and who subsequently fail to participate satisfactorily. The amendment effects recent legislation. Previously only such reservists who enlisted in the Ready Reserve prior to age 18½ were liable to priority induction for unsatisfactory participation.

The Selective Service System also manages the Standby Reserve. These reservists, subject to recall in the event of war or national emergency declared by Congress, may be recalled, however, only after they have been determined by local boards to be available.

Inductions since 1948 total 2,923,762, including Department of Defense requisitions through October 1962. Of these 2,811,554 were inducted into the Army, 84,199 into the Marine Corps, and 27,562 into the Navy. The total inducted, plus outstanding calls, through October 1962 for the preceding 12-month period was 110,037.

The Selective Service System has its national headquarters in Washington, D.C., and 56 state headquarters—one in each state, New York City, the District of Columbia, Guam, Puerto Rico, the Virgin Islands, and the Canal Zone. Nearly 4,000 local boards are manned by about 40,000 volunteers.

Lewis B. Hershey,
Lieutenant General, U.S. Army;
Director, Selective Service System.

SENEGAL

The Republic of Senegal is an independent member of the French Community situated on the west coast of Africa. It has an area of 76,124 square miles, and a population (est. mid-1961) of 2,980,000. The major ethnic groups are the Wolof (over 700,000), Peul (323,000), Serer (304,000), Tukulör (246,000), Diola (111,000), Malinke (84,000), and European (61,000), mainly French. French is the official language. Principal cities (with 1960 est. pop.): Dakar, the capital and chief port (300,000); Rufisque (49,800); Kaolack (46,800); and Saint-Louis (39,800).

Government.—The Republic of Senegal, proclaimed on Nov. 25, 1958, joined with Soudan on Jan. 17, 1959, to form the Federation of Mali, which on June 20, 1960, proclaimed its complete independence from France. Senegal withdrew from the federation on Aug. 20, 1960. Under the Senegalese constitution, adopted on Aug. 25, 1960, the president (Léopold Sédar Senghor, elected Sept. 5, 1960) serves as head of state. Executive power was vested in the premier (Mamadou Dia), who was appointed by the president but was responsible to the National Assembly. Following the attempted coup d'état of Dec. 17, 1962, the president assumed full executive power (see below *Events, 1962*). In the elections of March 22, 1959, the Progressive Senegalese Union won all 80 seats in the National Assembly.

Education and Religion.—About one fourth of the school-age population attend school. Number of schools (with enrollments), 1959: 567 primary (91,900); 37 secondary (7,000); 19 technical (2,000); 1 higher (1,315). Principal religions: Islam in the north; animism in the south; Roman Catholicism among the Europeans and the Diolas.

Finance.—Government expenditure, 1961: 36,145 million francs CFA, of which 30,006 million was for administration, and 6,139 million for equipment (246.85 francs CFA equal U.S.$1). French loans and grants to Senegal in 1961 totaled about 1.3 billion francs CFA. The 4-year development plan (1961–65) envisages the expenditure of 92,067 million CFA francs (50,561 million from public sources, and 41,506 million from private sources).

Transportation and Communications.—Transport networks (miles, 1958): railroads, 730; asphalt roads, 446; all-weather roads, 2,000; other roads, 4,500. There is a major international airport at Yoff (near Dakar), which is served by 14 international airlines.

Agriculture.—More than 90% of the population is engaged in agriculture and livestock raising. Chief crops (metric tons, 1960): peanuts, 930,000; millet and sorghum, 390,000; rice, 80,000; manioc, 75,000; and beans, 20,000. In 1960 the fish catch totaled 97,000 metric tons.

Manufactures and Minerals.—Gross national product, 1959: $517 million. Chief industrial products (metric tons, 1960): peanut oil, 143,000; cement, 182,000 (1961); electric power, 151 million kw.-hr. (1961); aluminum phosphate, 105,300; titanium (ilmenite), 32,266; zirconium, 10,349. Production of calcium phosphate, begun in August 1960, was estimated at 500,000 to 600,000 metric tons in 1962.

Foreign Trade.—Total exports, 1961: 30,657 million francs CFA; imports, 38,344 million. Chief exports: peanuts, 11,440 million francs CFA; peanut oil, 11,592 million. Chief imports: foodstuffs (rice, wheat, corn), petroleum products, textiles, and machinery. France in 1961 supplied 66% of total imports and bought 76% of exports.

Events, 1962.—Senegal experienced its first attempted coup d'état on December 17, when troops under Premier Mamadou Dia occupied the National Assembly and arrested some of its members in order to forestall a motion of censure against the Dia government. Troops loyal to President Senghor arrested Dia on December 18, after the deputies voted 55–0 to strip Dia of his parliamentary immunity and to abolish the office of premier. Senghor assumed the powers of head of government.

The Republic of Senegal accused Morocco on March 3 of plotting to overthrow its government and of training commandos in neighboring Mali for this purpose. On April 4, four persons were convicted for participating, with Senegalese exiles in Mali, in a plot to overthrow the government. Relations with Morocco were restored to normal, following a visit to Dakar on April 24 by Ahmed Alaouli, Moroccan minister of information. Relations with Mali, however, remained strained.

Dakar was the site for a trade union conference of delegates from 28 African states and territories in mid-January. The delegates decided on January 14 to establish the Pan-African Trade Union Conference, with headquarters in Dakar. The new organization, composed of trade unionists in the "Monrovia group" of African states, is a rival of the All-African Trade Union Federation, which was formed in 1961 by trade unionists in the "Casablanca group" of states. (See also AFRICA.)

In an effort to harmonize relations between the Monrovia and Casablanca groups, President Léopold Senghor of Senegal and President Sékou Touré of Guinea agreed to establish a permanent joint commission to coordinate activities for African unity. The joint commission is to meet periodically in Dakar and Conakry.

On June 14, during a visit of Premier Dia to Moscow, agreements on trade and economic and technical cooperation were signed by the Soviet Union and Senegal. Both countries also agreed to establish diplomatic relations, and signed a convention on cultural cooperation.

J. L. L.

SEYCHELLES

Situated in the Indian Ocean north of Madagascar, this British crown colony comprises the Seychelles (Mahé, Praslin, Silhouette, La Digue, Curieuse, and Félicité islands) and dependencies: the Aldabra, Farquhar, Amirante, and Alphonse island groups, and Coëtivy Island. The colony's 92 islands and coral reefs total 156 square miles; the population is 43,000 (1961 est.). Victoria (pop., 10,504), situated on Mahé Island (area, 55½ square miles) is the capital and chief port.

The colony is administered by a British-appointed governor (the Earl of Oxford and Asquith, appointed in 1961), who is assisted by an 8-member Executive Council and a 12-member Legislative Council. In 1960 there were 5,900 students in primary schools, and 886 in secondary and vocational schools.

The economy is based on agriculture supplemented by fishing. Chief crops (metric tons, 1960): cinnamon leaves, 7,339; cinnamon bark, 1,240; breadfruit, 986; and coconuts, 32,632,249 nuts. Total exports, 1961: £533,000; imports, £901,000. The chief export is copra (4,689 tons in 1960). Exports are sent mainly to India and Great Britain; imports come mainly from Great Britain, India, and Thailand. There are 102 miles of roads on Mahé Island. There is no air service to the Seychelles; steamships stop twice monthly at Victoria.

SHIPBUILDING. See MERCHANT MARINE.
SHIPPING. See Index entry.

SHOE INDUSTRY

The United States shoe industry in 1962 produced an estimated 626 million pairs of shoes (excluding rubber boots and shoes), marking the second record year in shoe production history. The 1959 production of 637 million pairs rates first. However, this was a gain of 5.6% over the 1961 production of 593 million pairs.

The use of leather substitutes, which began in 1961, continued, and by 1962 was very nearly perfected. These chemical products are used as shoe uppers and soles. They are durable, flexible, and can "breathe" almost as well as leather does; their chief advantage over leather is their unlimited supply.

The shoe manufacturing industry in the United States comprises approximately 850 companies, employing 240,000 workers (excluding rubber-shoe workers) in more than 1,300 factories in 38 states. Production in 1962 was distributed among the various categories of shoes in the same pattern as the previous year. Men's shoes made up about 18% of total production; women's, 48%; misses' and children's, 12%; and infants' shoes, slippers, and specialty type shoes, 22%.

World production continued to increase, but at a slow rate. In 1962 it reached 2.1 billion pairs, an increase over 1961 of about 70 million pairs.

SHOE PRODUCTION, BY MAJOR COUNTRIES
(1962 estimates)

Country	Millions of pairs	Country	Millions of pairs
United States	635	Argentina	38
USSR	312	Australia	37
United Kingdom	162	Japan	31
West Germany	137	Spain	28
France	98	Netherlands	23
Brazil	72	Sweden	22
Italy	62	Turkey	21
Canada	50	South Africa	20
India	44	Egypt	15
Mexico	43	Switzerland	15

SIERRA LEONE

An independent state within the Commonwealth of Nations since April 27, 1961, Sierra Leone is a tropical country on the western coast of Africa. This former British colony and protectorate has an area of 27,925 square miles, and a population (1960 est.) of 2,450,000. The population consists of a great majority of Africans and small minorities of about 3,000 Asians and 2,000 Europeans. Freetown, the capital and chief port, has a population (1960 est.) of 125,000. The most important tribes are the Mende in the south, the Temne in the center, and the Limba in the north. Creoles, descendants of the original founders of the former colony, play a leading role in the life of the country. The official language is English.

Government.—The government is nominally headed by a governor general (Henry J. L. Boston, appointed May 5, 1962, to succeed Sir Maurice H. Dorman). Executive power is vested in a prime minister (Sir Milton Margai) and a cabinet responsible to a unicameral legislature. The House of Representatives consists of 62 elected members and 12 tribal chiefs selected by district councils. In the election of May 25, 1962, the ruling People's Party won 28 seats; the opposition All-People's Congress and its allies, 20 seats; and independents, 14 seats. (See also below, *Events, 1962.*)

Education and Religion.—The estimated literacy rate in 1961 was 80% in the former colony and 5% in the former protectorate. Number of schools (with enrollments), 1960–61: 586 primary (86,244); 37 secondary (7,512); 2 technical (331); 6 teacher-training (629); and 1 university (302). Animism is practiced by many tribesmen. There are large groups of Christians and Muslims.

Finance.—Government revenue, 1961–62 est.: £13,924,000 (£12,854,807 in 1960–61); expenditure, £13,785,953 (£12,426,597). The net public debt as of March 31, 1961, was £6,680,152, excluding an exchequer loan from Great Britain of £3,000,000.

Transportation and Communications.—Sierra Leone's railways aggregate 342 miles of track and extend from Freetown to Pendembu, South Eastern Province, with a branch line to Makeni, Northern Province. Main public roads total 1,775 miles; local roads, 2,200. An international airport at Lungi, near Freetown, is served by seven foreign airlines; Sierra Leone Airways provides internal service. Other communications data for 1960: trucks and buses, 3,919; passenger cars, 5,468; radio subscribers, 3,573; and telephones, 4,200 (1961). A television service was inaugurated in August 1962.

Production.—Most of the population is engaged in agriculture. Principal subsistence crops (tons, 1961): manioc, 49,000; rice, 251,000; millet and sorghum, 24,000. Principal cash crops (tons exported, 1961): coffee, 5,024; cacao, 2,792; piassava, 5,732; palm kernels, 57,764; ginger, 592. About 80,000 persons are engaged in mining (chromite, diamonds, and iron ore) and in light industries.

Foreign Trade.—Total exports, 1961: £25,166,000 (£29,630,000 in 1960); imports, £32,539,000 (£26,342,000). Principal exports, 1961: diamonds, £15,969,057; iron ore, £4,672,835; palm kernels, £2,437,622. Chief imports include textiles, machinery, transport equipment, fuel, and food. In 1960, Great Britain bought 82% of total exports, the Netherlands received 9%, and West Germany, 4%; Great Britain provided 42% of total imports, and Japan provided 11%.

Events, 1962.—Prime Minister Sir Milton Margai's People's Party lost its parliamentary majority in the national elections of May 25, but was able to form a new government with the support of 12 of the 14 independents elected to the legislature. The People's Party, a conservative group supported by the Creoles on the coast and the tribal chiefs in the interior, won 28 seats. The All-People's Congress, a progressive party backed by the trade unions and most of the country's young people, won 16 seats. Its ally, the Progressive Independence Movement, won four seats. The opposition forces were further strengthened in September when the United Progressive Party and the All-People's Congress merged.

In June a preliminary 10-year development plan costing £164 million was announced. The plan called for the introduction of sugarcane, bananas, rubber, and other crops, and the expansion of industry by encouraging the manufacture of soap, cooking oil, cosmetics, and furniture. Expenditure in the first five years was estimated at £138 million, of which £82 million was to come from external sources.

SILK

According to statistics compiled by the American Silk Council, Inc., United States consumption of raw silk up to and including the first 10 months of 1962 amounted to 37,792 standard bales of 132,275 pounds. Compared with the consumption for the same period in 1961 (38,582 bales), this is a decrease of about 2%. Imports of 36,521 bales were 1.5% higher than for the corresponding period in 1961 (35,964 bales). Consumption for the full year 1961 was 47,907 bales, and imports totaled 45,998 bales.

World Production.—World silk output totaled 31,813 metric tons in 1961 (an increase of 1.5% from 1960), as shown in Table 1.

Table 1—RAW SILK PRODUCTION, BY MAJOR COUNTRIES, 1961

Country	Metric tons	Country	Metric tons
Brazil	93	Japan	18,679
Bulgaria	30	Korea, South	500
China	7,000	Lebanon	15
France	9	Poland	7
Greece	18	Rumania	15
Hungary	20	Spain	40
India	1,264	Syria	8
Indochina	178	Turkey	72
Iran	145	USSR	2,900
Italy	760	Yugoslavia	60

World Consumption.—Raw silk consumption in 1961 totaled 22,879 metric tons (as against 24,355 metric tons in 1960), with Japan by far the leading user and the United States in second place, as shown in Table 2.

Table 2—RAW SILK CONSUMPTION, BY MAJOR COUNTRIES
(In metric tons)

	1961 (12 months)	1962 (for period shown)
France	867	659 (8 months)
Germany	291	98 (6 months)
Great Britain	197	89 (6 months)
India	1,369	...[1]
Italy	1,940	506 (3 months)
Japan	14,715	10,193 (8 months)
Korea, South	206	...[1]
Switzerland	420	337 (9 months)
United States	2,874	1,356 (6 months)

[1] Not available.

While there were fluctuations in price, raw silk still showed a healthy balance between supply and demand in 1962, with very moderate stocks both in Japan and in New York.

(See also TEXTILE INDUSTRY.)

HANS VATERLAUS,
Executive Vice President,
International Silk Association (U.S.A.), Inc.

SILVER

In 1961 world output of silver declined to 231,800,000 troy ounces, or 3.5% from that of 1960, according to data compiled by the U.S. Bureau of Mines. Of the world output, the United States accounted for 15%, the same portion as in 1960.

United States.—Mine output of silver rose from 30,766,327 ounces in 1960 to 34,794,456 ounces in 1961. Minted silver production declined from 36,800,000 ounces in 1960 to 34,900,000 ounces in 1961. In the first nine months of 1962, output from mines totaled 27,621,983 troy ounces, compared with 26,429,847 ounces in the comparable period of 1961.

Canada.—In the first nine months of 1962, silver production was 23,077,177 ounces, compared with 23,047,790 ounces in 1961. In 1961, silver output was 31,168,283 ounces, compared with 34,016,829 ounces in 1960.

Mexico.—In the first seven months of 1962, output of silver was 23,878,067 ounces, compared with 24,024,160 ounces in the same period of 1961.

(See MINERAL PRODUCTION for table showing output of major silver-producing countries.)

SINGAPORE

A self-governing state within the Commonwealth of Nations, Singapore and its adjacent islands have a total area of 224.5 square miles and a population (Dec. 31, 1961 est.) of 1,712,600, including 1,287,700 Chinese, 240,200 Malaysians, 142,900 Indians and Pakistanis, and 13,800 Europeans. English, Malay, Chinese, and Tamil are the official languages.

Government.—Exercising full internal self-government since June 3, 1959, Singapore is under a British commissioner (Earl of Selkirk), who is also commissioner general for Southeast Asia and is responsible for Singapore's defense and foreign affairs. There is a nominal head of state (Inche Yusof bin Ishak, sworn in Dec. 1, 1959) and a prime minister (Lee Kuan Yew took office on June 5, 1959) who heads a 9-member cabinet chosen from the legislators. The 51-member Legislative Assembly is elected by universal suffrage for a 5-year term. In the election of May 30, 1959, the People's Action Party (headed by Lee Kuan Yew) won 43 seats in the assembly.

Education and Religion.—School enrollment, 1961: 399,470 (over half the school-age population). Number of schools (with enrollments), 1960: 589 primary (289,172); 121 secondary (58,710); 5 technical (1,345); 1 teacher-training (2,327); 3 higher (5,808). Principal religions: Buddhism, Confucianism, and Taoism (adherents are the Chinese); Islam (Malaysians and Pakistanis); and Hinduism (Indians).

Finance.—Government revenue, 1962 est.: M$386 million (M$397 million in 1961); expenditure, M$561 million (M$385 million in 1961). The Malayan dollar equals U.S.$0.3267. Expenditure included M$225 million for development and public works.

Transportation and Communications.—Singapore is the major port and warehouse of Southeast Asia. Cargo loadings, 1961: 6,622,000 tons (5,376,000 in 1960); unloadings, 11,940,000 (9,756,000 in 1960). A 16-mile railroad connects Singapore with Malaya. Roads aggregate 488 miles (1961). The international airport at Paya Lebor is used by Malayan Airways and 10 other airlines. Other communications data for 1961: passenger cars, 77,500; commercial vehicles, 15,800; telephones, 59,722 (1960); licensed radio receivers 142,000 (1960).

Economy.—Singapore is the world's largest rubber market and pepper trading center. Chief industries are rubber processing, shipbuilding and repairing, marine engineering, oil refining, tin smelting, and iron and steel rolling. Production (tons, 1960): coconut oil, 24,539; remilled rubber, 126,700; sago palm products, 21,408; rubber footwear, 1,789,200 pairs; rubber compound, 645,100 pounds; soya bean sauce, 2,324,800 gallons. Agricultural output (tons, 1960): mixed vegetables, 20,320; root crops, 10,260; and 14 million coconuts. In 1961, tourism accounted for 256,000 visitors (225,000 in 1960).

Foreign Trade.—The chief shipping and receiving center for Malaya, Singapore handles about 40% of Malaya's imports and 30% of her exports. Total exports, 1961: M$3,314 million; imports, M$3,964 million. Chief exports (excluding Malaya, 1961): rubber, M$1,120.8 million; mineral fuels, M$308 million. Chief imports (excluding Malaya, 1961): food, M$642 million; crude rubber, M$502 million; mineral fuels, M$574 million. Chief suppliers: Indonesia, Malaya, and Great Britain; chief customers: Malaya, Great Britain, and the United States.

Events, 1962.—Singapore voted in a referendum on September 1 to join the projected federation of Malaya, Sarawak, Brunei, and North Borneo, scheduled to be established in 1963 as the Federation of Malaysia (see MALAYA). The results of the voting for three alternative proposals were as follows: for federation with retention by Singapore of control over matters of education and labor, 397,626; for unconditional federation, 9,419; for federation on unspecified terms no less favorable than those to be granted to British Borneo, 7,911. Some 144,000 blank ballots were cast by about 25% of the electorate after the left-wing Socialist Front called for the casting of blank votes as a protest to the alternatives of the referendum. The ruling People's Action Party energetically supported federation with the self-rule guarantees.

The uncertainty surrounding the establishment of the Federation of Malaysia resulted in a considerable slowing down in private investment and development during the year.

SMITHSONIAN INSTITUTION

During 1962 the Smithsonian Institution[1] continued its scientific investigations, chiefly in the fields of anthropology, astrophysics, biology, and geology. Several field expeditions were in progress. Construction work continued on the institution's $36 million Museum of History and Technology in Washington, D.C.

[1] The institution administers 12 bureaus supported partly or in whole by federal appropriations: the United States National Museum, Bureau of American Ethnology, Astrophysical Observatory, National Collection of Fine Arts, Freer Gallery of Art, National Air Museum, National Zoological Park, Canal Zone Biological Area, International Exchange Service, National Gallery of Art (with separate board of trustees), National Portrait Gallery, and National Cultural Center (with separate board of trustees).

The National Museum collections added 854,000 specimens during the year, bringing the total to 56 million. A newly modernized hall depicting the cultures of the Pacific Ocean areas and Asia was opened to the public. The National Gallery of Art received 1,437 accessions and held 17 special exhibits. The National Collection of Fine Arts sponsored 19 special exhibits; its traveling exhibition service circulated 27 new shows. The Freer Gallery of Art acquired several specimens of Oriental art. Among the accessions of the National Air Museum were the *Freedom 7*, a Mercury capsule used in the first United States manned suborbital space flight.

At the National Zoological Park, a male lowland gorilla was born in 1962, the second gorilla born in captivity in the United States and the fourth in the world. The park also added 1,340 animals to its collection, including a female African rhinoceros, two female Masai giraffes, an Indian elephant, an East African golden cat, and two king cobras.

Anthropologists on the staff of the Bureau of American Ethnology continued their researches and publication in archaeology and ethnology. The work of the Smithsonian Astrophysical Observatory (with headquarters at Cambridge, Mass.) continued along several principal lines—solar astrophysics, meteors and meteorites, artificial satellites, geophysics, and space science. Studies of plants, birds, insects, fishes, limnology, ecology, and photography were carried on at the Canal Zone Biological Area, Barro Colorado Island, Panama.

Eighty-five publications appeared under the Smithsonian imprint in 1962, including *Folk Religion in Southwest China* by David C. Graham, *Dimensional Relations for Flying Animals* by Crawford H. Greenewalt, *European Military Museums* by J. Lee Westrate, *Robber Flies of the World* by Frank M. Hull, *John Baptist Jackson: 18th Century Master of the Color Woodcut* by Jacob Kainen, *Mohave Ethnopsychiatry and Suicide* by George Devereux, and *Seneca Thanksgiving Rituals* by Wallace L. Chafe.

SOCIAL SECURITY

The Social Security Administration is a constituent unit of the Department of Health, Education, and Welfare. Before Jan. 28, 1963, the agency had federal responsibility for three major programs under the Social Security Act: old-age, survivors, and disability insurance; public assistance; and health and welfare services for children (as well as research on child life). It also administered the Federal Credit Union Act. As of Jan. 28, 1963, the secretary of health, education, and welfare set up a new unit—the Welfare Administration, headed by a commissioner of welfare—to direct the department's programs (chiefly federal-state in nature) for the welfare of children, the aging, and families and individuals in need. Transferred from the Social Security Administration to the Welfare Administration were the Children's Bureau, the Bureau of Family Services, and the Cuban refugee program. The Juvenile Delinquency and Youth Development Staff and the Staff on Aging, which formerly reported directly to the secretary, are also the responsibility of the commissioner of welfare. (Another Social Security Act program—federal-state unemployment insurance—is the responsibility of the Department of Labor.)

The Social Security Administration directs the federal program of old-age, survivors, and disability insurance; it studies methods of providing economic security and related subjects; and it also administers the Federal Credit Union Act.

Study of the welfare provisions of the Social Security Act and concern with proposals to help the aged pay their medical care bills marked much of the legislative activity in 1962. No new provisions to take care of the problems of the aged and their medical care costs were passed, but significant revisions of the Social Security Act's public assistance provisions, along with changes in the provisions relating to child welfare services, were made in the Public Welfare Amendments of 1962, signed July 25.

The Migration and Refugee Assistance Act, signed June 28, authorizes a program of aid to Cuban refugees to continue the activities carried on under 1961 presidential directives to help these Cubans on their migration to the United States with their problems of health, education, training, employment, and resettlement, and to provide financial aid when necessary.

On March 15 the president signed the Manpower Development and Training Act, which set up a 3-year program to make maximum use of the nation's manpower and upgrade the skills of the unemployed and those who cannot qualify for full-time jobs without training. The law authorizes federal funds for manpower research, for job training in educational institutions and on-the-job facilities, and, in certain circumstances, for subsistence allowances during the training period.

In October 1962 the Civil Service Retirement Act was amended to provide for automatic increases in retirement benefits for federal employees, related to rises in the cost of living.

Old-Age, Survivors, and Disability Insurance.—During 1962, employers and employees paid contributions at a 3⅛% rate, and the self-employed at 4.7%. The rates for 1963 are 3⅝% for employers and employees, and 5.4% for the self-employed. In the year ended June 1962, about $13,669,000,000 was paid in monthly benefits and lump-sum death payments, including $1,011,000,000 for disabled workers and their dependents. Nearly 17,300,000 beneficiaries were on the rolls in June 1962. The average retired worker's benefit (not counting payments to his dependents) was $76.03; for disabled workers the average was $89.73.

Public Assistance.—The federal government makes grants to help the states finance their assistance programs for four groups of needy persons—families with dependent children, the blind, the permanently and totally disabled, and the aged. Another type of aid is given to the aged whose need is related to their inability to take care of their medical care costs.

The 1962 amendments to the public assistance provisions of the Social Security Act put new emphasis on rehabilitative and other social services to prevent or reduce dependency. The major amendments include:

(1) Revising the formula for federal sharing in state expenditures for the needy aged, the blind, and the disabled so that states will be able to raise monthly payments by about $4.

(2) Increasing to 75%, under certain conditions, the amount of federal sharing in administrative costs of certain social services to the needy and staff training activities, instead of the 50% for all other administrative costs.

(3) Changing the name of the program for needy children to "aid to families with dependent children."

(4) Extending for 5 years aid to needy children of unemployed parents, and making permanent aid to certain children receiving foster-home care.

(5) Permitting, in aid to families with dependent children, federal sharing in: (a) payments to a second parent in specified circumstances; (b) "protective" payments, under certain conditions, to another person concerned with a needy child if the relative cannot manage the funds to the child's best interests; and (c) payments for work done by a relative of a needy child in states with

community work and training programs for assistance families.

During 1962, federal funds were being used for old-age assistance, aid to the blind, and aid to families with dependent children in all states, the District of Columbia, Guam, Puerto Rico, and the Virgin Islands. Programs of aid to the permanently and totally disabled were operating in 51 jurisdictions at the end of the year. In July 1962, payments under medical assistance for the aged were being made in 24 states, Guam, Puerto Rico, and the Virgin Islands.

In July 1962, old-age assistance payments were going to 2,233,400 persons; payments were being made for 102,900 persons through medical assistance for the aged; about 100,200 needy blind persons were receiving aid; and there were 419,000 recipients of aid to the permanently and totally disabled. Recipients of aid to dependent children totaled 3,640,900, 45,400 of whom were in families with unemployed parents. Average payments in July 1962 were $73.15 per needy aged person; $205.36 for the medically indigent aged; $31.40 per individual getting aid to dependent children; $77.49 for the needy blind; and $71.43 for the permanently and totally disabled.

State and local governments administer the "general" assistance program without federal funds. In July 1961 about 798,000 persons were getting this type of aid; the average payment was $27.61.

Maternal and Child Health and Child Welfare.—The Social Security Act authorizes federal grants to states to extend and improve health and welfare services for mothers and children.

In the year ended June 1961, federal grants to the states for maternal and child health services totaled $23,852,000. Grants amounting to $24,092,000 were made for services for crippled children. The states received grants totaling $18,646,000 for child welfare services.

The 1962 amendments relating to child welfare services: (1) increased the authorized amount for appropriation from $25 million to $30 million for the fiscal year 1963 and, by gradual steps, to $50 million for fiscal year 1969 and thereafter; (2) provided for coordinating the services, beginning July 1963, with those under aid to families with dependent children; (3) earmarked part of the program appropriation for day-care services and set specific requirements for such services under state plans; (4) authorized grants to institutions of higher learning for projects for training child welfare personnel; and (5) clarified the definition of child welfare services.

Federal Credit Unions.—The Social Security Administration is responsible for the chartering and supervision of credit unions organized under the Federal Credit Union Act. These are cooperative organizations, designed to promote thrift among their members and create a source of loans for provident and productive purposes. Membership is limited to groups having a common bond of association, occupation, or residence. On June 30, 1962, about 10,500 of these credit unions were in operation; their total membership was about 6,700,000, and their total assets amounted to $3,184,000,000.

Robert M. Ball,
Commissioner, Social Security Administration.

SOCIAL WELFARE

The Congress of the United States adopted the Public Welfare Amendments of 1962, containing the most extensive changes in the Social Security Act since its enactment in 1935. The most significant provisions of the law (Public Law 87–543), signed by President Kennedy on July 25, 1962, were designed to emphasize the preventive and rehabilitative aspects of the welfare program, to improve administration, and to fill gaps in existing legislation.

Amendment Provisions.—The provision for aid to dependent children of families in need due to the unemployment of a parent was extended to June 30, 1967, and assistance to dependent children in foster family care was made a permanent part of the program. Heretofore only one parent of dependent children could be included in the grant. Under the 1962 amendments it will be possible to include the second parent living in the home, if incapacitated or unemployed.

Further amendment provisions set up requirements under which protective payments may be made to guarantee that funds are used for the benefit of the children. Such payments may be extended to a maximum of 5 per cent of other recipients under the program.

Under carefully defined conditions, federal financial participation in aid to families with dependent children is authorized when relatives with whom a child is living engage in community work and training programs directed toward conservation of skill and development of new skills.

The 1962 amendments emphasize incentives for families to help themselves, through a requirement that all expenses involved in employment be taken into consideration in determining the public assistance grant, liberalized provisions for disregarding earned income in aid to the blind, and an optional provision for disregarding the first $10 of earned income of old-age assistance recipients plus one half of the remainder of their earned income up to $50 a month. Furthermore, states may make provision for setting aside all or a portion of a family's income for identifiable future needs of a dependent child, with particular attention to plans for education, special training, and employment.

The matching ratios for old-age assistance, aid to the permanently and totally disabled, and aid to the blind were liberalized so that, instead of the former federal participation in 80 per cent of the first $31 of the grant, the federal share, effective Oct. 1, 1962, was increased to $29 of the first $35 of the grant, with the average monthly maximum increased from $66 to $70, exclusive of vendor payments for medical care. A new matching formula was developed whereby the federal government will pay 75 per cent of the costs of staff training and for services in selected public assistance cases or the purchase of services under certain circumstances from other state public agencies.

The objective of combining categories on an optional basis was partially met through the addition of a new Title XVI to the Social Security Act, whereby a state may combine its categories of assistance for the aged, blind, and disabled, and medical assistance for the aged. Some changes will be necessary in state plan requirements. Additional federal funds for vendor payments for medical care for recipients of old-age assistance may be extended to the blind and disabled.

Special provision is made for demonstration projects in order to encourage experimentation in more effective administration and in service programs. Such projects may be initiated in any administrative jurisdiction. In both public assistance and child welfare, the new amendments emphasize training of personnel with provision for grants to institutions of higher learning and for various types of traineeships.

A clarified definition of child welfare services was adopted, and the amendments increase the authorization for grants to the states for these services by $5 million increments, from $25 million for the fiscal year 1962–63 to $50 million per year beginning in 1968–69. Recognizing the growing problem of proper care for young children

of working mothers, special provision was made for earmarked funds to be allotted among the states under the child welfare services plan to provide for day care services.

Trends in Assistance Programs.—Accompanied by an increasing proportion of cases in which old-age assistance is supplementary to old-age insurance benefits, the number of recipients of old-age assistance decreased from 2,296,000 in June 1961 to 2,237,000 in June 1962. The average payment to these recipients, including vendor payments for medical care, increased from $67.85 in June 1961 to $72.55 in June 1962.

Reflecting continuing population growth and large areas of high unemployment, the number of recipients of aid to dependent children increased from 3,383,000 in June 1961 to 3,693,000 in June 1962. During the year the average payment per individual, including vendor payments for medical care, continued its slow upward trend from $30.30 to $31.48.

For aid to the permanently and totally disabled, the case load increased from 384,000 in June 1961 to 417,000 in June 1962. The average grant, including vendor payments for medical care, rose from $68.19 to $72.06. With the increasing emphasis upon medical care costs, it is significant that in old-age assistance, $14.49 of the total payment for June 1962 was for medical care, while in aid to the permanently and totally disabled, payments for medical care averaged $15.58.

For aid to the blind, the case load continued its downward trend, dropping from 106,000 in June 1961 to 100,000 in June 1962. The average payment per case, including vendor payments for medical care, increased from $73.36 to $77.47. The general assistance case load showed the usual seasonal patterns. Supported entirely from local and state funds without federal matching, 406,000 cases were reported for June 1961 and 340,000 for June 1962.

Only 15 states had adopted the new program of aid to dependent children of unemployed parents by June 1962. They reported a total of 51,843 families, including 188,349 children, in the case load as of that month. A total of 13 states had adopted the new program of aid for dependent children in foster care, and reported 639 cases with 1,516 children as of June 1962.

Child Welfare.—One effect of the 1962 amendments is to emphasize inter-relationships between aid to families with dependent children and child welfare services, to the end that more effective services are provided for children in their own homes and for children who must be removed from their own homes, including increased attention to adequate day care facilities for children of working mothers. In 1961 an estimated 552,200 children were served by public and voluntary child welfare programs, with 354,400 served primarily by public agencies. (See also CHILDREN AND YOUTH.)

Services to the Aged.—Increasing attention is being given to specialized services needed by older citizens from all walks of life. Both the Department of Health, Education, and Welfare and national voluntary agencies are helping to direct increased attention to the needs of older people in such areas as living arrangements, recreational and educational opportunities, health care, protective services, and continued participation in community life. (See also OLD AGE.)

Medical Care.—State and local departments of public welfare are rapidly increasing the total amount of vendor payments for medical care both for older persons and for those under 65 years of age. The total amount expended for vendor payments under the public assistance and general assistance programs in June 1962 was $74 million, as compared with $56 million in June 1961.

UPI

Training for an overseas assignment, a Peace Corps volunteer works in a New York City children's day care center.

As of June 1962, 27 jurisdictions reported programs of medical assistance for the aged, serving over 101,000 persons. More than two thirds of the persons under these programs, authorized by the 1960 Kerr-Mills legislation, are in California, Massachusetts, New York, and West Virginia.

ELLEN WINSTON,
Commissioner, North Carolina State Board of Public Welfare.

SOCIALISM

The chief strength of the democratic Socialist movement continued in 1962 to reside in Europe, although many powerful Socialist parties existed on other continents.

The Socialist International.—The main coordinating agency for the world movement was the Socialist International, with affiliated parties in over 40 countries. On June 2–4, 1962, the Council of the Socialist International met in Oslo, Norway, and adopted a new declaration of principles entitled *The World Today—A Socialist Perspective.* The declaration, which reaffirmed the principles set forth in the Frankfurt Declaration of 1951, summarized the principles of its member parties, with their 11 million members and electorate of 70 million, as follows:

> We Democratic Socialists proclaim our conviction that the ultimate aim of political activity is the fullest development of every human personality; that liberty and democratic self-government are precious rights which must not be surrendered; that every individual is entitled to equal status, consideration, and opportunity; that discrimination on grounds of race, color, nationality, creed, or sex must be opposed; that the community must ensure that material resources are used for the common good rather than the enrichment of the few; above all, that freedom and equality and prosperity are not alternatives between which the people must choose but ideals that can be achieved and enjoyed together.

The declaration repudiated both what it termed the "soulless tyranny of Communism and the wasteful injustice of capitalism." It envisaged a democratic, flexible Socialist economy in which private, cooperative, and public industries each had their place. To achieve a fair distribution of wealth, it maintained, society requires "an extension of public ownership and control and other legislation to curb private monopolies, to effect a radical reform of the tax system, and to protect consumers."

In the international field, the declaration recognized "the right of all nations to self-determina-

tion"; declared that industrialized countries should provide at least 1% of their national income for grant aid programs; urged the strengthening of the United Nations, with world government as the ultimate goal; and warned the developing nations against communism. "Although the Communist countries use the strongest anticolonial language," the declaration stated, "they have enslaved scores of millions of people. Misusing the word 'socialism,' their one-party dictatorships represent, in fact, tyranny, denying those freedoms of speech, religion, criticism, voluntary organization, and contacts with the outside world which are the essence of a democratic society."

The Council at the Oslo meeting reiterated the Socialists' desire to achieve general and multilateral disarmament with adequate means of international inspection and control. It also denounced recent cases of suppression of human rights in developed and underdeveloped countries.

Approving in principle the Common Market, it urged the European Economic Community (EEC) to admit to membership Israel and the European countries that had submitted applications. It also recorded the hope that the EEC would become "what it was meant to be—an economic community of neighbors, avoiding high tariffs and other restrictive commercial practices, deeply conscious of their wider obligations to the world in general, particularly to the developing nations, anxious to see expanding economic development and world trade, and progressive, radical, and fundamentally international in its outlook."

Europe.—In Europe, Socialist and labor parties in 1962 remained in control of the governments in Denmark, Norway, and Sweden; were represented in the cabinets in Austria, Belgium, Italy, and Switzerland; constituted the chief opposition parties in Great Britain, France, the Netherlands, and West Germany; and were influential political forces in Finland and elsewhere. They registered considerable gains in the municipal and provincial elections in Great Britain, the Netherlands, and West Germany, and held their own in Denmark.

In the parliamentary elections in *France,* the Socialists increased their representation in the National Assembly from 41 to 64. In *Austria* they elected 76 members to the lower chamber, a loss of 2. In *Finland* the Social Democratic Party won 39 seats in the 200-seat Federal Parliament, a gain of 2, while the extreme left-wing Socialists lost 12 seats, retaining only 2. In *Great Britain,* the Labour Party during the year opposed Britain's entrance into the EEC unless further concessions were made. In *Italy,* the left-wing Socialists continued their support of Premier Amintore Fanfani's government, and Social Democrats were prominent members of the cabinet. In *Denmark,* on September 3, Jens Otto Krag succeeded Viggo Kampmann, who resigned the premiership because of illness.

Israel.—The Mapai (Socialist) Party continued to be the strongest party in the coalition government headed by David Ben-Gurion.

Australia–New Zealand.—Labour parties were the chief opposition in 1962. The New South Wales Labour Party remained the government party following the March elections, in which it won 59 out of 95 parliamentary seats.

Asia.—In *Japan* the Socialist Party won 66 seats in the Senate out of 250, a decrease of 2, while the more moderate Social Democratic Party won 11 seats, a loss of 5. In *India,* the Praja-Socialist Party won 12 seats in Parliament, a loss of 7; the party continued to cooperate with the Congress Party in the Kerala coalition government. In *Burma,* U Nu, Socialist premier, was ousted from office by a military group which, however, on assuming power, promised to adhere to the principles of socialism. In *Nepal, Indonesia,* and *South Korea,* Socialist parties were either suppressed or greatly restricted in their activities.

Africa.—Socialists throughout Africa were active throughout the year in independence movements. A Social Democratic movement continued in control of the *Malagasy Republic,* while leaders of many of the new nations maintained that their goal was an African Socialist commonwealth.

Western Hemisphere.—The most active Socialist movement on the North American continent was in *Canada.* The New Democratic Party (NDP), formed by the Cooperative Commonwealth Federation (CCF) and the Canadian Labour Congress, entered its first federal election, winning 19 seats in Parliament, an increase of 11 over the former representation of the CCF. In Saskatchewan, the NDP, in control of the government, fought bitterly against the province's medical society over its plan to pay doctors' fees out of the provincial treasury. While modifying the law, the government won its main objective.

In the *United States,* the Socialist Party–Social Democratic Federation, a member of the Socialist International, at its June conference, urged vigorous social planning to deal with unemployment, the effects of automation, and "sprawling" urban development. It criticized the government's support of specific reactionary regimes abroad and urged disengagement and the end of nuclear testing.

Socialists in Latin America supported progressive regimes in *Costa Rica, Venezuela,* and *Puerto Rico;* they denounced the dictatorship in *Cuba* and the forced exclusion of Victor Raúl Haya de la Torre by a military group from the presidency of *Peru.* In *Argentina,* Socialist Alfredo Palacios resigned from the Senate in protest against the president's decree recessing Parliament for at least a year, while the country's political parties were being reorganized.

A moderate Socialist, Hermes Lima, was appointed premier of *Brazil,* while Socialist and Labour parties in the *West Indies* continued to be dominant forces in the government.

In *British Guiana,* the Socialist movement was divided, with Premier Cheddi Jagan, left-wing Socialist, urging immediate independence for the island, and the People's National Congress, moderate Socialists, urging the welding of racial groups before independence.

SOCIETIES AND ORGANIZATIONS

The following pages contain a selected list of some of the principal associations, societies, foundations, and trusts of the United States and Canada. In each case, the information has been supplied by the organization concerned. Additional related material may be found in the articles on the principal government agencies, religious bodies, etc.

Adult Education Association of the United States of America.—Membership: 5,400. Publications: *Adult Education* (quarterly); *Adult Leadership* (monthly). Annual meeting: Detroit, Mich., Oct. 30–Nov. 1, 1962. President, Robert Sharer; exec. director, Glenn Jensen. Headquarters: 743 N. Wabash Ave., Chicago 11, Ill.

Alcoholics Anonymous (The General Service Board of AA, Inc.)—Membership: approx. 300,000 in over 9,000 affiliated international groups. Publications: *Alcoholics Anonymous; AA Comes of Age; Twelve Steps and Twelve Traditions; AA Grapevine* (monthly). Address: P.O. Box 459, Grand Central Station, New York 17, N.Y.

American Academy of Arts and Letters.—Membership limited to 50. Publications: catalogues of art and manuscript exhibitions; *Proceedings,* 2d Series, No. 12; *Yearbook,* 1962. On May 24, 1962, a public ceremonial was given jointly with the National Institute of Arts and Letters. (For details, see *National Institute of Arts and Letters* entry below.) The annual meeting is held in December in New York City. President, Douglas Moore; secretary, John Hersey. Headquarters: 633 West 155th St., New York 32, N.Y.

American Academy of Arts and Sciences.—Membership: 1,600. Endowment: $1 million. Publications: *Proceedings; Daedalus; Memoirs; Bulletin.* President, Hudson Hoagland; secretary, John R. Raper. Annual meeting is held the 2d Wednesday in May, in Boston. Headquarters: 280 Newton St., Brookline Station, Boston 46, Mass.

American Academy of Political and Social Science.—Membership (Jan. 1, 1962): 15,345. Publications (1962): *Crime and the American Penal System; Automation; Unconventional Warfare; American Foreign Policy Challenged; The Ethics of Business Enterprise; Liberalism and Conservatism in American Politics.* The 66th annual meeting was held in Philadelphia, April 13–14, 1962. President, James C. Charlesworth; editor, Thorsten Sellin. Headquarters: 3937 Chestnut St., Philadelphia 4, Pa.

American Association for the Advancement of Science.—Membership: 72,000. There are 298 affiliated societies with a combined membership of more than 7 million, not excluding duplicates. Endowment: $552,300. Publications: *Science* (weekly); *AAAS Bulletin* (quarterly); AAAS symposium volumes, 1962: *Fundamentals of Keratinization, Great Lakes Basin, Spermatozoan Motility.* Annual meeting and exposition of science and industry, Philadelphia, Pa., Dec. 26–30, 1962. President, Paul Gross; exec. officer, Dael Wolfle. Headquarters: 1515 Massachusetts Ave. NW, Washington 5, D.C.

American Association of University Professors.—Membership: 52,000 faculty members distributed among 1,500 institutions in the U.S. and abroad; 734 local chapters. Forty-five state and regional conferences facilitate the association's work. Publication: *AAUP Bulletin* (quarterly). Annual meeting: San Francisco, Calif., April 26–27, 1962. President, Fritz Machlup; gen. secretary, William P. Fidler. Headquarters: 1785 Massachusetts Ave. NW, Washington 6, D.C.

American Association of University Women.—Membership: 150,000 in 1,500 branches. Fellowship endowment: $3,500,000. Publication: *Journal* (issued Oct., Jan., March, and May). Biennial meeting—June 1963, Denver, Colo. President, Dr. Anna L. Rose Hawkes; gen. director, Dr. Pauline Tompkins. Headquarters: 2401 Virginia Ave. NW, Washington 7, D.C.

American Automobile Association.—Membership: over 7,500,000 in 746 member organizations and branches. Publications include *Sportsmanlike Driving* (4th ed.). Annual meeting: Detroit, Mich., Oct. 9–10, 1962. President, George F. Kachlein, Jr.; secretary, William B. Spencer. Headquarters: 1712 G St. NW, Washington 6, D.C.

American Bankers Association.—Membership: 17,582 banks and branches. Publication: *Banking* (monthly). The 88th annual convention was held in Atlantic City, N.J., Sept. 23–26, 1962. President, M. Monroe Kimbrel; vice pres., William F. Kelly; treas., J. Carlisle Rogers. Headquarters: 12 East 36th St., New York 16, N.Y.

American Bar Association.—Membership: 112,000. Publications: *American Bar Association Journal* (monthly); *American Bar NEWS* (monthly); *Annual Report;* numerous specialized manuals. Eighty-fifth annual meeting: San Francisco, Calif., Aug. 6–10, 1962. President, Sylvester C. Smith, Jr.; secretary, Joseph D. Calhoun. Headquarters: 1155 East 60th St. Chicago 37, Ill.

American Bible Society.—Membership: approx. 400,000. Publication: *Bible Society Record* (monthly). Annual meeting: New York City, May 10, 1962; May 9, 1963. President, Everett Smith; exec. secretary, Robert T. Taylor. Headquarters: 450 Park Ave., New York 22, N.Y.

American Book Publishers Council, Inc.—Membership: 171 publishing firms. Annual meeting: Skytop, Pa., April 24–27, 1962. President, William E. Spaulding; managing director, Dan Lacy. Headquarters: 58 West 40th St., New York 18, N.Y.

American Cancer Society, Inc.—Membership: 192 persons; 59 chartered Divisions. Publications: *Cancer; Cancer News; CA* (a journal for clinicians); *Annual Report.* Annual meeting: New York City, Oct. 22–26, 1962. President, I. S. Ravdin, M.D.; secretary, Charles R. Ebersol. Headquarters: 521 West 57th St., New York 19, N.Y.

American Chemical Society.—Membership: 95,000. Publications: *Journal of The American Chemical Society* (semimonthly); *Chemical and Engineering News* (weekly); *Analytical Chemistry* (monthly); *Industrial and Engineering Chemistry* (monthly, with quarterly supplements); *Biochemistry; Inorganic Chemistry; Chemistry;* Chemical Abstracts Service; Chemical Reviews; Journals of Agricultural and Food Chemistry, Chemical Documentation, Chemical and Engineering Data, Medicinal Chemistry, Organic Chemistry, Physical Chemistry. Meetings, 1962: Washington, D.C., March 20–29; Atlantic City, N.J., Sept. 9–14. Meetings, 1963: Cincinnati, Ohio, Jan. 13–18; Los Angeles, Calif., March 31–April 5; New York City, Sept. 8–13. President, Henry Eyring; exec. secretary, Alden H. Emery. Headquarters: 1155 16th St. NW, Washington 6, D.C.

American Civil Liberties Union.—Membership: 60,000, including that of 28 affiliates. Publications: *Civil Liberties;* various pamphlets. A biennial conference (June 22–24, 1962) is held in New York City and other major cities. Chairman, Ernest Angell; exec. director, John de J. Pemberton, Jr. Headquarters: 156 Fifth Ave., New York 10, N.Y.

American Council of Learned Societies.—Membership: 31 professional societies. Publications (1962): *Annual Report; ACLS Newsletter.* Annual meeting: Washington, D.C., Jan. 17–19, 1963. Chairman of Board of Directors, Robert M. Lumiansky; president, Frederick Burkhardt. Headquarters: 345 East 46th St., New York 17, N.Y.

American Council on Education.—Membership: 146 organizations; 1,085 educational institutions, school systems, and departments of education. Annual meeting: Chicago, Ill., Oct. 3–5, 1962; Washington, D.C., Oct. 2–4, 1963. Publications: *The Educational Record; Higher Education and National Affairs.* President, Logan Wilson; secretary, Byron K. Trippet. Headquarters: 1785 Massachusetts Ave. NW, Washington 6, D.C.

American Dental Association.—Membership (1962): 98,842 in 54 state and 443 local societies. Publications: *ADA Newsletter* (biweekly); *The Journal of the American Dental Association* and *Dental Abstracts* (monthlies); *Journal of Oral Surgery, Anesthesia and Hospital Dental Service* (bimonthly); *Index to Dental Literature* (quarterly and annual); *American Dental Directory* and *Accepted Dental Remedies* (annuals). The 103d annual session: Miami Beach, Fla., Oct. 29–Nov. 1, 1962. President, Dr. Gerald D. Timmons; secretary, Dr. Harold Hillenbrand. Headquarters: 222 E. Superior St., Chicago 11, Ill.

American Economic Association.—Membership: 10,800; and 4,100 subscribers. Publications: *American Economic Review;* Papers and Proceedings of annual meetings; occasional monographs. Annual meeting: Pittsburgh, Pa., Dec. 27–29, 1962. President, Edward S. Mason; secretary, Harold F. Williamson. Headquarters: Northwestern University, Evanston, Ill.

American Farm Bureau Federation.—Membership: 1,600,994 families. Publication: *Nation's Agriculture.* Annual meeting: Atlanta, Ga., Dec. 10–13, 1962. President, Charles B. Shuman; secretary-treas., Roger Fleming. Headquarters: 1000 Merchandise Mart, Chicago 54, Ill.

American Federation of Labor and Congress of Industrial Organizations.—See the article, LABOR.

American Geographical Society.—Membership: 4,200. Publications: *Geographical Review* (quarterly); *Focus, Current Geographical Publications,* and *Soviet Geography: Review and Translation* (10 issues a year); various books and maps. Annual dinner-address: New York City, Dec. 6, 1962. President, Walter A. Wood; director, Charles B. Hitchcock. Headquarters: Broadway at 156th St., New York 32, N.Y.

American Geophysical Union.—Membership: 7,200 individuals; 73 organizations. Publications: *Journal of Geophysical Research* (monthly); *Transactions* (quarterly); Geophysical Monograph Series; English editions of the following Soviet geophysical publications—*Izvestiya* (monthly); *Geodesy and Aerophotography* (monthly); *Geomagnetism and Aeronomy* (bimonthly); *Soviet Hydrology: Selected Papers;* Oceanology sections of *Doklady* and *Trudy,* Marine Hydrophysical Inst. Annual meeting, held in Washington, D.C.: April 25–28, 1962; April 17–20, 1963. President, Thomas F. Malone; gen. secretary, A. Nelson Sayre; exec. secretary, Waldo E. Smith. Headquarters: 1515 Massachusetts Ave. NW, Washington 5, D.C.

American Heart Association, Inc.—Membership: 34,500; 55 state affiliates; 296 chapters. Funds contributed by public, 1961: $26,437,931. Publications: *Circulation* (monthly); *Circulation Research* (monthly); *Heart Bulletin; Modern Concepts of Cardiovascular Disease; Annual Report.* Annual meeting and scientific sessions: Cleveland, Ohio, Oct. 26–30, 1962. President, Dr. James V. Warren; secretary, Ross Reid. Headquarters: 44 East 23d St., New York 10, N.Y.

American Historical Association.—Membership: approx. 10,000. Publications: *American Historical Review; Annual Report* (including *Writings in American History*); annual prize volumes; and various studies for teachers. Annual meeting: Chicago, Ill., Dec. 28–30, 1962. President, Carl Bridenbaugh; exec. secretary, Boyd C. Shafer. Headquarters: 400 A St. SE, Washington 3, D.C.

American Hospital Association.—Membership (1962): 8,085 institutional; 5,562 personal. Publications: *Hospitals; Trustee* (journal for hospital governing boards); *Auxiliary Leader* (journal for hospital auxiliaries); *This Month at the American Hospital Association; This Month in Washington; Public Relations Newsletter.* Annual meeting: Chicago, Ill., Sept. 17–20, 1962. President, T. Stewart Hamilton, M.D.; director, Edwin L. Crosby, M.D. Headquarters: 840 N. Lake Shore Dr., Chicago 11, Ill.

American Institute of Architects.—Membership: 15,100 in 139 chapters; 14 state organizations. Publications: *Journal* (monthly); *Memo* (biweekly). Annual meeting: Dallas, Texas, May 7–11, 1962; Miami, Fla., May 6–10, 1963. President, Henry L. Wright, FAIA; exec. director, William H. Scheick, AIA; secretary, Clinton Gamble, FAIA. Headquarters: The Octagon, 1735 New York Ave. NW, Washington 6, D.C.

American Institute of Chemical Engineers.—Membership: 21,884. Publications: *Chemical Engineering Progress* (monthly); *A.I.Ch.E. Journal* (bimonthly); *International Chemical Engineering* (quarterly); various monographs and the *Symposium Series.* Four meetings are held each year. President, W. R. Marshall, Jr.; secretary, F. J. Van Antwerpen. Headquarters: 345 East 47th St., New York 17, N.Y.

American Institute of Mining, Metallurgical, and Petroleum Engineers.—Membership: 36,740. Publications: *Journal of Metals* (monthly); *Transactions of the Society of Mining Engineers* (quarterly); *Society of Petroleum Engineers Journal* (quarterly); *Transactions of the Metallurgical Society* (bimonthly); *Mining Engineering; Journal of Petroleum Technology.* Annual meeting: New York City, Feb. 18–22, 1962; Dallas, Texas, Feb. 24–28, 1963. President, Lloyd E. Elkins; gen. secretary, Ernest Kirkendall. Headquarters: 345 East 47th St., New York 17, N.Y.

American Legion, The.—Membership: 2,679,255 in 58 departments and 16,753 posts. Publications: *The American Legion Magazine* (monthly). Activities include child welfare work, and American Legion baseball program, a national high school oratorical contest, boy scout work, and citizenship training. Forty-fourth National Convention: Las Vegas, Nev., Oct. 5–11, 1962. Headquarters: 700 N. Pennsylvania St. (P.O. Box 1055), Indianapolis 6, Ind.

American Library Association.—See separate article under its own heading.

American Mathematical Society.—Membership: approx. 8,500 individuals; 224 institutions; 16 corporations. Publications: *Bulletin; Proceedings; Transactions; Math-Doklady; Chinese Mathematics-Acta; Mathematics of Computation; Colloquium* publications; reviews, surveys, memoirs, lectures, and translations of monographs. Annual meeting: Berkeley, Calif., Jan. 24–28, 1963. President, Deane Montgomery; secretary, J. W. Green. Headquarters: 190 Hope St., Providence 6, R.I.

American Medical Association.—Membership: 190,000 in 54 state and territorial associations. Publications: *Journal of the AMA* (weekly); *AMA News* (biweekly); *Today's Health* (monthly); ten monthly journals devoted to special fields of medicine; *Cumulated Index Medicus; Current Medical Terminology; AMA Directory;* various books, pamphlets, and reprints. Annual meeting: Chicago, Ill., June 24–28, 1962; Atlantic City, N.J., June 16–20, 1963. President, George M. Fister, M.D.; exec. vice pres., F.J.L. Blasingame, M.D. Headquarters: 535 N. Dearborn St., Chicago 10, Ill.

American Museum of Natural History.—Fifty-eight exhibitions areas interpret every aspect of the natural world. The Museum sponsors extensive research in its laboratories and field stations, and conducts an extensive educational program. Membership: 124,210. Publications: (Technical) *The Bulletin, Novitiates, Anthropological Papers,* Contributions of the American Museum-Hayden Planetarium; (Popular) *Natural History* (10 issues yearly), *Junior Natural History;* (Professional Journal) *Curator.* President, Alexander M. White; director, James A. Oliver. Address: Central Park West at 79th St., New York 24, N.Y.

American National Red Cross.—Membership: 45,000,000 adults and youth in 3,600 chapters. In 1961–62, the Red Cross, during its largest disaster operation, gave emergency care to approximately 420,700 persons and rehabilitation grants to nearly 17,600 families affected by Hurricane Carla; collected over 2,500,000 units of blood from volunteer donors; became the coordinating agency for providing blood and blood products to the Defense Department on request or in a national emergency; agreed to provide gamma globulin needed to protect Peace Corps members against hepatitis; gave first aid training to Peace Corps members at 16 colleges and universities; provided technical assistance to Red Cross societies in Ceylon, Liberia, Indonesia, Togo, the Congo, Somalia, and Tanganyika. Sloan Foundation, Alfred P.—Gives financial assistance to scientific research and provides for scholarships and fellowships. Fund reserves: $225,154,095. Total grants

(Dec. 31, 1961): $74,474,006. President, Everett N. Case; chairman of the board, Alfred P. Sloan, Jr.; vice pres. and exec. director, Arnold J. Zurcher; vice pres., secretary, and treas., James F. Kenney. Headquarters: 630 Fifth Ave., New York 20, N.Y.

Smithsonian Institution.—See separate article under its own heading.

Social Science Research Council.—Membership: 30 members of the board of directors, of whom 21 are designated by 7 national social science organizations and 9 are elected as directors-at-large. In 1961–62 the Council awarded 31 faculty research fellowships; 39 research training fellowships; 6 political theory and legal philosophy fellowships; 33 grants-in-aid for research unrestricted as to field; 10 grants for research on American governmental and legal processes; 9 senior awards for research on American governmental affairs; 4 grants for research on national security policy; jointly with the American Council of Learned Societies, 13 grants for African studies, 15 grants for Asian studies, 9 grants for research on contemporary China, 12 grants for Latin American studies, 9 grants for research on the Near and Middle East, and 19 grants for Slavic and East European studies; and 61 grants for travel to international conferences. President, Pendleton Herring; vice pres., Paul Webbink. Headquarters: 230 Park Ave., New York 17, N.Y.

Special Libraries Association.—Membership: approx. 5,500. Publications: (periodicals) *Special Libraries* (10 issues yearly); *Technical Book Review Index; Scientific Meetings; News and Notes;* (books, 1962) *Guide to Special Issues and Indexes of Periodicals.* The association maintains the SLA Loan Collection of Subject Heading Lists and Classification Schemes at Western Reserve University, and the SLA Translations Center at the John Crerar Library in Chicago, and in addition supports a consultation service and a placement service throughout the country. The 53d annual convention was held in Washington, D.C., in May 1962. President Ethel S. Klahre; exec. secretary, Bill M. Woods. Headquarters: 31 East 10th St., New York 3, N.Y.

Travelers Aid Association, National.—See under *National.*

Twentieth Century Fund.—An endowed foundation for research and public education on economic and social issues and problems. Assets (Dec. 31, 1961): $24,616,166. Publications (1962): *Of Time, Work, and Leisure; Economic Development in Burma, 1951–1960; Yugoslavia and the New Communism; Shaping the World Economy: Suggestions for an International Economic Policy.* Studies in progress include: distribution costs and methods; nuclear energy; poverty and affluence; economic policy in Latin America; economic development of South Asia; North Atlantic agricultural policy. Director, August Heckscher. Headquarters: 41 East 70th St., New York 21, N.Y.

United Community Funds and Councils of America, Inc. (formerly COMMUNITY CHESTS AND COUNCILS OF AMERICA, INC.).—Membership: 2,200 united funds, community chests, councils and affiliates in U.S., Canada, Australia and Philippines. Publication: *Community* (bimonthly); various bulletins, studies, and manuals. For 1962, $501,693,627 was raised for the support of voluntary health and welfare services. National conferences are held biennially: San Francisco, Calif., March 11, 1962; Cincinnati, Ohio, Feb. 2–7, 1964. President, John S. Hayes, secretary, James D. Ewing; exec. director, Lyman S. Ford. Headquarters: 345 East 46th St., New York 17, N.Y.

USO (United Service Organizations, Inc.).—A private, nonprofit, independent agency providing welfare, recreation, and live entertainment for American armed forces in the U.S. and overseas. Recognized by the Department of Defense as the principal civilian agency for assisting military authorities, it operates with minimum staff, plus volunteer help, 209 off-post clubs and hospitality centers for servicemen. USO is financed solely by direct public contributions raised through community funds or other campaigns. Chairman, Harvey S. Firestone, Jr.; president, Holgar J. Johnson; secretary, Mrs. Francis T. Christy; exec. director, Edwin E. Bond. Headquarters: 237 East 52d St., New York 22, N.Y.

United States Junior Chamber of Commerce.—Providing men aged 21 through 35 with an opportunity for personal development and achievement through participation in local and national affairs and, through Junior Chamber International, in world affairs. Membership: 211,000. Publications: *Future Action* (monthlies). Annual convention: Las Vegas, Nev., June 18–21, 1962; Louisville, Ky., June 25–27, 1963. President, Doug Blankenship; exec. vice pres., Max D. Nalley. Headquarters: Boulder Park, Box 7, Tulsa 2, Okla.

Veterans of Foreign Wars of the United States.—Membership: 1,500,000 active. Publication: *V.F.W. Magazine.* National convention: Minneapolis, Minn., Aug. 12–17, 1962. Commander-in-Chief, Byron B. Gentry; adjutant general, Julian Dickenson. Headquarters: V.F.W. Bldg., Broadway at 34th St., Kansas City 11, Mo.

Woman's Christian Temperance Union, National.—See under *National.*

Women's Clubs, General Federation of.—See under *General.*

Young Men's Christian Associations, National Council of the.—See under *National.*

Young Women's Christian Association of the U.S.A.—In the U.S. there are more than 5,400 places where there is some phase of YWCA program; through the World YWCA the National Board is allied with YWCA work in 70 other countries and territories. Publications: *The YWCA Magazine; National YWCA Bulletin; The Bookshelf.* The 23d National Triennial Convention will be held in 1964 in Cleveland, Ohio. President, Mrs. Archie D. Marvel; gen. secretary, Edith M. Lerrigo. Headquarters: 600 Lexington Ave., New York 22, N.Y.

World Council of Churches.—Official instrument of 201 denominations representing all major branches of the Reformation, the Old Catholics, the Eastern Orthodox, and other ancient Eastern churches in some 80 countries. Member churches represent some 300,000,000 believers. Work is carried on through three main divisions: Study; Ecumenical Action; and Interchurch Aid and Service to Refugees. Assemblies are held every six years (New Delhi, India, Dec. 1961). In the interim, the Council is governed by a Central Committee of 100 members which meet yearly. Dr. Franklin Clark Fry (USA) is chairman. Publications: *Ecumenical Press Service* (weekly); *Ecumenical Review* (quarterly); *Ecumenical Courier* (bimonthly). Presiding officers of the Council are six presidents: Archbishop of Canterbury A. M. Ramsey (Great Britain); Archbishop Iakovos (Greek Orthodox); Dr. Martin Niemöller (Germany); Rev. Dr. David G. Moses (India); Sir Francis Ibiam (Nigeria); Charles C. Parlin (USA). General secretary, Dr. W. A. Visser 't Hooft. Headquarters: 17 Route de Malagnou, Geneva, Switzerland. Exec. secretary, New York Office, Dr. Roswell P. Barnes; assoc. exec. secretary, Rev. Raymond E. Maxwell. Address: 475 Riverside Drive, New York 27, N.Y.

Zionist Organization of America.—Membership: 250,000, including its affiliates, Young Judaea and B'nai Zion. Publications: *The American Zionist; The Organization Letter; ZINS; Z.O.A. Reporter.* Annual convention: Washington, D.C., June 28–July 1, 1962. President, Dr. Max Nussbaum; national secretary, Dr. Sidney Marks. Headquarters: 145 East 32d St., New York 16, N.Y.

Compiled by R. M. C.

SOCIOLOGY

In the year 1962, traditional studies of the city by sociologists were being supplemented by research dealing with the city as a changing unit within a larger area known as the "urban region." The need for this shift in emphasis was made clear by U.S. Census reports of population loss in the 1950–60 decade by several large cities, such as New York, Chicago, Philadelphia, Detroit, and San Francisco. In each case an emigration of people from within the city to contingent areas took place. As pointed out in *The Sociology of Urban Regions* (1962) by Alvin Boskoff, the human race has been undergoing an evolution in its community structure from rural village to town to city to urban region.

Juvenile Delinquency.—The sociology of deviant behavior of youth received specialized attention, as attested by a set of nine articles in the spring 1962 issue of *Sociological Inquiry.* The specializations were spelled out in the titles of some of the articles, for example: "Self Conceptions of Types of Delinquents"; "Prospects and Problems of Delinquent Typology"; "The Uncommitted Adolescent as a Candidate for Group Socialization"; and "Delinquency and Perceived Opportunity." Along the same line were papers presented at the 57th Annual Meeting of the American Sociological Association: *Scaling Juvenile Delinquency; The Prospects for Delinquency Reduction in Industrial Societies;* and *Role Models for Boy Assaulters and Thieves.*

Race Relations.—In one of a number of articles in *Social Forces* (March 1962) dealing with race relations, Ruth Searles and J. A. Williams, Jr., stated that a sample of students in Negro colleges in North Carolina viewed sit-in protests as less indicative "of social alienation among students than their identification with positive reference to the white middle class." Another article, by Norman Lustig, on the demographic characteristics and pro-integration vote of white precincts in a metropolitan Southern county, pointed out that "higher income and education were found to correlate positively at a very significant level" with

a pro-integration vote percentage. In an analysis of "cognitive simplicity and prejudice," Fredrick Koenig and Morton King concluded that intolerant students were less accurate than others in predicting behavior.

Theory.—A comparative analysis of the "social systems" of seven American sociologists was made in *Modern Social Theories: Selected American Writers* (1961) by C. P. and Z. K. Loomis. A frame of reference for reviewing and comparing these social systems was labeled a "Processually Articulated Model." In this setting, sociology appeared to be concerned with social actions, that is, with any event in which "one party tangibly influences the overt action or the state of mind of the other." The sociologists whose theories were under review were Howard Becker, Kingsley Davis, George Homans, Robert Merton, Talcott Parsons, Pitirim Sorokin, and Robin Williams, Jr. A social system was explained as being composed of "the patterned interaction of its members whose relations to each other are mutually oriented through the definition and mediation of a pattern of structured and shared symbols and expectations." The theorists, who were compared in part by their treatments of social change, responded by tape recordings to the respective analyses by the authors.

Research Outside the United States.—In a report on the distribution of the themes in sociology in 1,479 dissertations "dealing with societies other than the United States, by society or region, 1950–1960," given in the *American Sociological Review* for February 1962, by Robert Marsh, it was stated that 23% of these dissertations dealt with social situations in Europe; 13% with Central American-Caribbean situations; 10% with conditions in China-Japan-Korea; 8% with India-Pakistan-Ceylon; 7% with the Middle East; 6% with Southeast Asia; 5% with Australia-Philippines–New Guinea; and 4% with Africa. An increasing proportion of "cross-national doctoral dissertations" was also noted.

The Sociology Consultant.—Sociological literature pointed toward the rise of a new profession—the "sociology consultant," a trained sociologist called on for scientific assistance by an institution or organization which has found other methods unsatisfactory. In *Social Theory and Practice* (1962), Hans Zetterberg outlined a method for applying sociological laws and theorems to a major problem, in this case that of an art museum. In *The Organization from Within* (1962) Cyril Sofer described the activities of a sociology consultant in diagnosing the problems of an industrial organization, of a research unit of a mental hospital, and of an engineering unit of a technical college. According to Sofer, the work involved a reconceptualization of an organization's problems and a redefining of assumptions and expectations, followed by formulating and evaluating innovations.

Meetings.—About 90 American sociologists read papers or took part in the discussions of the Fifth World Congress of Sociology of the International Sociological Association, held for the first time in the United States, September 2–8 (Washington, D.C.). The general subjects were: "The Sociologists, the Policy Makers, and the Public"; "The Sociology of Development"; "The Nature and Problems of Sociological Theory," and "The Sociology of Knowledge." Special sessions were devoted to political sociology, industrial sociology, psychiatric sociology, social stratification and mobility, sociology of mass communications, and sociology of religions. The official languages of the Congress were English and French. Represented on the programs were 40 countries.

The general theme of the 57th Annual Meeting of the American Sociological Association, held in Washington, D.C., August 29–September 2, was "The Uses of Sociology," with Paul F. Lazarsfeld of Columbia University as president. Special subjects presented included: "The Role of the Sociologist as a Staff Member in Business and Industry, in Health and Medicine, and in Organized Religion"; "The Sociologist as a Consultant"; "The Uses of Sociology in the Study of the Consumer"; and "The Role of Sociology in Urban Planning." The 58th Annual Meeting will be held in Los Angeles in the latter part of August 1963, with Everett C. Hughes of Brandeis University giving the presidential address.

SOMALIA

An equatorial country on the horn of east-central Africa, the Republic of Somalia comprises the former United Nations trust territory of Somaliland (administered by Italy) and the former Somaliland Protectorate (under Great Britain). The estimated area is 246,000 square miles, and the population (1961 est.) is 1,990,000, mainly nomadic and seminomadic Somalis, with small Arab and Italian minorities. Arabic and Italian are the official written languages; Somali is the principal spoken language. The chief cities are Mogadishu (Mogadiscio; 1958 est. pop., 86,643), the capital and chief port; Hargeisa (45,000), former seat of government of British Somaliland; Merca (61,400); Berbera (20,000); and Margherita (20,000).

Government.—The Somali Constitution, approved by the electorate on June 20, 1961, confirmed a republican form of government for Somalia. The president (Aden Abdullah Osman, elected July 1, 1960) is chosen by the 123-member National Assembly. He appoints the premier (Abdi Rashid Shermarke took office on July 22, 1960), who heads a 15-member cabinet.

Education and Religion.—Educational facilities are available mainly in the cities. In 1958 only 3% of the school-age population attended school. School enrollment, 1960: primary, 22,341; secondary, 2,248; technical, 847; teacher-training, 215; and higher, 79. Islam is the state religion; most of the population are Sunni Muslims of the Shafi'ite sect.

Finance.—Somalia's major financial problem is to obtain from its meager resources sufficient revenue formerly provided by Italy and Great Britain. In 1960 the budget was balanced at 160 million somolos (7.14 somolos equal U.S.$1). In 1962, West Germany advanced DM25 million ($6.25 million) in long-term credits to Somalia. Somalia also obtained a $55 million credit from the USSR to build a deep-water harbor at Berbera.

Transportation and Communications.—Somalia's lack of railways, inland waterways, and adequate all-weather roads has seriously hindered its economic development. In the former British protectorate there are about 2,500 miles of roads motorable in the dry season; in the former trust territory, there are about 5,490 miles of road, of which 390 miles are paved. Airlines serve Mogadishu, Hargeisa, and Berbera. Telephones in the former trust territory totaled 1,545 in 1959; passenger cars, 5,900.

Production.—About 70% of the population is engaged in animal husbandry, mainly of sheep, goats, cattle, and camels. Subsistence crops include durra, corn, and millet. The chief cash crops are sugarcane (107,971 metric tons in 1959) and bananas (85,000 metric tons). Light manufactures include sugar refining, hides and skins, and handicrafts.

Foreign Trade.—Total exports, 1960: 117,137,000 somolos; imports, 130,970,000. Principal exports (in thousand somolos) were fruit and vegetables, 74,778; meat and fish, 10,506; hides and skins, 7,047; wood and charcoal, 9,800. Trade is primarily with Italy, followed by Kenya, Iran, and Aden.

Events, 1962.—Somalia's border disputes with neighboring states remained unresolved in 1962. The Somali government continued to press for the formation of a Greater Somalia to include territories occupied by Somali tribesmen in northern Kenya, southeastern Ethiopia, and in French Somaliland. Premier Shermarke declared on January

24 that a self-determination plebiscite should be held in Kenya's Northern Frontier Province to determine whether it should join Somalia. Although Shermarke announced at that time that Somalia would buy armaments worth some £300,000 from Great Britain and Italy, he reiterated his government's intention to resolve border disputes "by means of negotiations alone." As a means of lessening tension, Somalia's first ambassador to Ethiopia took up his post in Addis Ababa on May 12.

On July 26–30, Jomo Kenyatta, Kenyan minister of state, visited Somalia to discuss the formation of an East African federation to include Kenya, Somalia, Tanganyika, and Uganda.

Premier Shermarke paid an official visit to the United States in November. During his talks with President Kennedy he reportedly asked for military aid and increased economic assistance to Somalia. The United States has granted $11 million in aid to Somalia.

As a result of devastating floods in the latter part of 1961, some 800,000 persons threatened by famine and disease were aided by emergency food supplies provided by the United Nations and individual countries.

SOUTH AFRICA

A republic outside the Commonwealth of Nations since May 31, 1961, South Africa is the only independent country in Africa south of the Sahara that is controlled politically and economically by its white residents. Though a minority, these whites form a much higher proportion of the total population than in any other part of central and southern Africa, and direct by far the most mature economy.

Area and Population.—The total area of South Africa is 472,733 square miles, divided among four provinces as follows: Cape (including the 374 square miles of Walvis Bay, which is administered with South West Africa), 278,839; Transvaal, 110,450; Orange Free State, 49,866; and Natal, 33,578. In 1947, South Africa acquired Marion and Prince Edward islands, which lie 1,200 miles southeast of Cape Town. The South African government also administers South West Africa (q.v.).

The census of Sept. 6, 1960, revealed a total population of 15,841,128 (excluding 12,568 in Walvis Bay), of whom 3,067,638 were white (60% Afrikaner and 40% English) and 12,773,490 nonwhite. The latter included 10,807,809 Africans; 1,488,267 Coloreds, of mixed descent; and 477,414 Asians, mostly of Indian origin. The population is increasing at a rate of over 2% a year, and in mid-1961 was estimated at 16,236,000.

The population of the principal cities in 1960, with the number of whites in parentheses, was as follows: Johannesburg, mining and commercial center, 1,096,541 (389,690); Cape Town, the legislative capital, 731,484 (279,404); Durban, 655,370 (194,276); Pretoria, the administrative capital, 415,989 (198,295); Port Elizabeth, 270,815 (94,085); Germiston, 204,605 (84,419); and Bloemfontein, the judicial center, 140,924 (61,213).

Education.—White children between 7 and 16 years of age are required to attend school in Afrikaans- or English-medium institutions. The two parallel systems of state schools, which are administered by provincial departments of education, had a combined enrollment of 614,178 in primary and secondary grades in 1960. The private English-medium day and boarding schools (47,678 pupils in 1960) are subject to some government regulation, and their students generally sit for state examinations. The second language is taught in all schools, and more than 70% of South African whites are bilingual.

Education is not compulsory for nonwhites, and the latter have segregated institutions. African education has been state controlled since 1953 and under the Department of Bantu Education since 1958. In 1960 there were 6,124 primary and secondary Bantu schools with 1,335,655 children enrolled, many in the lowest grades. The government estimates that 80% of all Africans between the ages of 7 and 20 are literate, though in 1951 only 31% of the Africans were literate. In 1960 there were 381,190 Colored children in school.

There are four English-medium universities (Witwatersrand, Cape Town, Natal, and Rhodes), four Afrikaans-medium universities (Pretoria, Stellenbosch, Orange Free State, and Potchefstroom), and the University of South Africa, which provides correspondence and vocational courses for students of all races and acts also as an external examination body. Apart from a few nonwhite students who are permitted by the government to complete their courses of study at Witwatersrand or Cape Town universities, nonwhites are admitted only to the three tribally oriented colleges for Africans operated by the Department of Bantu Education or the similarly segregated and controlled institutions established for Coloreds and Asians. Among nonwhite institutions, only the Bantu Medical School in Durban has retained its independence of government administration. The students and teachers in the institutions for nonwhites are not permitted to criticize the government or apartheid policies. Total enrollment at South African universities in 1960 was as follows: whites, 29,775; Africans, 1,637; Coloreds, 607; and Asians, 1,218.

Government.—The South African Constitution is embodied in the South Africa Act, passed by the British Parliament in 1909. Apart from a guarantee of equality for the Afrikaans and English languages, any provision of the constitution may be changed by majority action of the South African Parliament. The four provinces of the republic, whose legislative union came into effect on May 31, 1910, exercise specific functions and have their own structure of government but possess no guaranteed powers, and each operates under a nationally appointed administrator.

Legislative power is exercised by the state president, Senate, and House of Assembly. Only whites are eligible for these offices. Charles R. Swart, the first president of the republic, was elected on May 10, 1961, for a 7-year term by a parliamentary vote of 139 to 71. The Senate, as reconstituted in 1960, consists of 54 members, of whom 43 are elected to represent the provinces in accordance with their population, and 11 are appointed by the president. Since the elections of Oct. 26, 1960, the National Party has had 39 members in the Senate, and the United Party 15.

The House of Assembly, the dominant chamber, consists of 160 members chosen at the general election of Oct. 18, 1961. In 1962 the Nationalists controlled 105 seats; the United Party, the official opposition, 50; and the Progressives, 1. The 4 members elected by the Colored voters generally align themselves with the United Party. Africans lost their right to elect representatives to Parliament in 1960.

Transportation and Communications.—As of 1960, South Africa had 12,101 miles of state-owned railways. Further to develop their facilities, the Railways and Harbours Administration received a loan of $11 million from the International Bank for Reconstruction and Development in December 1961. Of the 113,800 miles of national and provincial roads (1960), 10,897 miles have a bituminous surface. Scheduled air services are provided by the government-owned South African Airways and nine foreign airlines. Communications facilities include 996,000 licensed radio sets (1960) and 937,818 telephones (1961).

Finance.—Due chiefly to exchange and import controls but also to record production of gold and increased exports of manufactures, the South African Reserve Bank's foreign exchange and gold reserves reached $595 million on Aug. 31, 1962, in a striking change from the low point of $215 million on June 16, 1961, after the country had left the Commonwealth. This increase was aided by a loan on Dec. 5, 1961, of $10 million from the Deutsche Bank of West Germany. The Reserve Bank rate was cut during 1962 by 1%, to 3½%, and building societies reduced their mortgage rates to 6½%. Despite these lower interest rates, a good supply of investment capital, and a favorable balance

Crowd in Johannesburg, South Africa, demonstrates on May 26 against the proposed Sabotage Act, which many claimed would curtail civil rights. Parliament passed act June 15.

UPI

on the current account, private interests appeared reluctant to invest heavily in future economic development, and it seemed likely that the government would have to stimulate such activity.

The budget for the fiscal year ending March 31, 1963, estimated total expenditures at R795.1 million (1 rand equals U.S.$1.40), or approximately R70 million more than in 1961–62. The increase was caused mainly by larger expenditures for defense, the cost of which was to total R120 million, and for the development of the African areas, notably the Transkeian Territories, for which R25 million was earmarked. To balance the budget, taxes on liquor and diesel fuel were increased, customs duties were raised slightly on many items, and discounts were abolished on personal and corporate income tax payments.

The gross national product for the year ending June 30, 1962, was estimated at about $9 billion, or 5.3% higher than for 1960–61. Net national income rose from R4,040 million in 1959–60 to R4,271 million in 1960–61.

Mining.—In 1961, gold output rose by 7.3% to a record 22,946,294 ounces, valued at R574.9 million; output in the first 6 months of 1962 totaled 12,400,000 ounces. An additional R70 million in foreign exchange was earned through exports of uranium oxide, though uranium profits were slightly less than in 1960. Diamond mining also set new records, with a production of 3,787,862 metric carats, as compared with 3,139,764 carats in 1960. Output of other minerals included 39,564,000 metric tons of coal, 4,056,000 tons of iron ore, and 52,440 tons of copper.

Agriculture.—The corn crop in 1961–62, totaling 4,855,000 metric tons, was so large that it put a severe strain on the stabilization fund. Reduction in acreage may be indicated, though the government has not yet proposed it. Wool clippings rose to 304 million pounds (greasy basis), but prices were lower. Production of other major crops in 1961–62, in thousands of metric tons with 1960–61 figures in parentheses, was as follows: wheat, 833 (771); sugar, 997 (902); sorghum, 193 (310); peanuts, 197 (283); and citrus fruit (million boxes), 13.2 (9.4).

Industrial Production.—South Africa is expanding its industrial production with the objective of becoming relatively self-sufficient. The government plans to increase to 70% the share of locally produced textiles in the home market and envisages more textile factories in the border areas of the Bantu reserves to use their cheap labor. Other major development programs are being undertaken by the state-supported iron and steel industry, which produced 2,340,000 metric tons of pig iron and ferroalloys and 2,472,000 tons of steel in 1961; and by the Electricity Supply Corporation, which has embarked on a 10-year plan to meet the demands of mining and manufacturing industries. In 1961 the output of electricity totaled 24,552 million kw.-hr. Private industry has also scheduled $204 million for new and expanded facilities for aluminum, asbestos, fertilizers, electronics, locomotive, and air-conditioning plants and other fields.

The most striking development announced in 1962 was the $630 million Orange River Project, comprising water supply, irrigation, and hydroelectric aspects. Though planned as a 30-year program, its key features (two large dams, water tunnels, and irrigation schemes) were to be started at once. The objective was to provide water and power to northern and eastern Cape Province and southern and western Orange Free State in order to encourage industries in the cities and the reuse of parched agricultural land.

Foreign Trade.—Gold production amounting to R574.9 million more than covered the trade deficit of R54.8 million in 1961. Merchandise exports (including those of South West Africa) totaled R950.8 million (R884.0 million in 1960), and imports R1,005.6 million (R1,111.1 million). Though import controls were eased in December 1961 on farm equipment and machinery, they continued to restrict the inflow of other products to 50% of the items imported in the first 8 months of 1960. In the first half of 1962, exports totaled R486.3 million; imports, R497.8 million; and gold production, R308.2 million.

Despite South Africa's withdrawal from the Commonwealth in May 1961, Great Britain again permitted its exports to enjoy Commonwealth preference through the South Africa Act, which went into effect in May 1962. Though preferences on British goods in South Africa are of limited importance, British investments in that country are worth £900 million, and the republic remains Britain's fifth best customer. Thus far the overseas boycott of South African goods has had little effect, since Britain and the United States, the two largest importers, do not participate in it.

Events, 1962.—In the face of increasing isolation from other countries except Great Britain, and of mounting demands for United Nations action to force it to change its policies of racial discrimination, Prime Minister Hendrik F. Verwoerd's ruling Nationalist Party in 1962 furthered economic development to make South Africa relatively self-sufficient, enacted the so-called Sabotage Act, and introduced the first substantial program of positive apartheid or, as it is now called, separate development. This program to establish eight Bantustans, of which the first is to comprise the Transkeian Territories in Cape Province, is intended to divert African energies from nationalist activities within the country as a whole and to demonstrate the government's intention of building self-governing Bantu homelands.

When Dr. Verwoerd announced in the House of Assembly on January 23 that limited self-government was to be granted the Transkeian Territories under a constitution drafted by local Africans, he declared that only through this development could the Bantu retain their own identity and safeguard their national heritage. In fact, a form of local self-governing institutions, with limited financial and administrative functions, had been established in the Transkeian Territories by the British as early as 1894. Under government urging, this structure was replaced in 1956 by a Bantu territorial authority, which had original taxing powers and an African chairman but a membership strictly controlled by the Department of Bantu Administration and Development.

On Jan. 31–Feb. 1, 1962, a committee appointed by the territorial authority was convened in Umtata to draft a constitution for the Transkei scheduled to come into effect in mid-1963. Though this constitution was supposed to be drafted without government influence, requests were denied for genuine self-government and for an equal number of elected members and of chiefs in the Transkeian Legislative Assembly. The representation in the latter body is to be 45 elected members and 64 chiefs, whose holding of their tribal offices must be endorsed by the government. Powers of the assembly are not to extend to external affairs, defense, tariffs, and the Transkeian Constitution. Citizenship and voting rights are extended to all Xhosa-speaking Bantu within South Africa, but urban Africans are expected to boycott the elections because they denounced the Bantustan development as a means of dividing and controlling Africans and of bypassing the claim of the African majority for a share in the government of the country as a whole.

Within the Transkei itself the chiefs and, in particular, those of the Tembu royal house were divided over the constitution. Chief Kaizer D. Matanzima, a junior member of the royal house, was chairman of the Transkeian Territorial Author-

ity and is slated by the government to become the first prime minister of the Transkeian Bantustan. Paramount Chief Sabata Dalinyebo, the reigning head, and most of his tribe, opposed the institution of the Bantustan and the proposed constitution and allocation of powers. Nevertheless, the authority approved the constitution on May 4.

Repressive measures continued to grow in intensity and use throughout South Africa in 1962. On June 15, despite bitter opposition, Parliament adopted the General Law Amendment Act, commonly called the Sabotage Act, which instituted a wide range of harsh penalties, including the death sentence for acts ranging from trespass to murder if these were committed in order to change "the economic or social order." Under this act, 102 persons, including ex-Chief Albert J. Luthuli, winner of the 1960 Nobel Peace Prize, and Patrick Duncan, vigorous anti-Communist editor of the liberal periodical *Contact,* were placed on a list whose members cannot be quoted in writing under a penalty of five years' imprisonment. By November 14, 12 persons, including Mrs. Helen Joseph, formerly vice president of the Congress of Democrats, had been put under a form of highly restrictive house arrest called "civil death" by the leader of the opposition, Sir de Villiers Graaff.

On September 7, the government banned the white left-wing Congress of Democrats under the Suppression of Communism Act. (The two African nationalist movements, the African National Congress and the Pan-African Congress, had been banned since 1960.) On November 7, Nelson Mandela, former secretary general of the African National Congress, was sentenced to five years in jail. Because of demonstrations at his trial, all protest meetings were banned until April 30, 1963. Meanwhile, to meet government criticisms of the English language press and thereby escape censorship, the Newspaper Press Union drew up a code (announced March 13, 1962) to ensure no deviation from facts in material sent overseas for publication.

The strongest efforts yet made to exert pressure on South Africa through the United Nations came in the 17th session of the General Assembly, though none of them could be expected to have the effect desired by their African and Asian sponsors. On Nov. 6, 1962, by a vote of 67 to 16 with 23 abstentions, the assembly called on members of the United Nations to impose economic (and possibly diplomatic) sanctions against South Africa to force it to abandon its policies of racial discrimination and segregation. Great Britain, the United States, and other Western nations opposed this action, which they believed should be reserved for cases of flagrant aggression. Their open condemnation of apartheid left no doubt, however, that South Africa was out of step with the rest of the world in its racial policies.

SOUTH CAROLINA

A South Atlantic state of the United States, South Carolina ranks 40th among the states in area (land, 30,272 square miles; inland water, 783) and 27th in population (2,436,000 on July 1, 1962, a 2.3% increase from the 1960 census figure of 2,382,594). Urban places with populations above 15,000 in 1960:

Anderson	41,316	Greenwood	16,644
Charleston	65,925	Rock Hill	29,404
Columbia (*capital*)	97,433	Spartanburg	44,352
Florence	24,722	Sumter	23,062
Greenville	66,188		

Government.—Chief executive and judicial officers in 1962 included Ernest F. Hollings (Democrat), governor, serving a four-year term; Burnet R. Maybank, lieutenant governor; O. Frank Thornton, secretary of state; Jeff B. Bates, treasurer; J. M. Smith, auditor; Daniel R. McLeod, attorney general; Jesse T. Anderson, superintendent of education; and Claude A. Taylor, chief justice of the 5-member Supreme Court.

The South Carolina General Assembly, which convenes annually, comprised 46 Democrats in the Senate in 1962 and 123 Democrats and 1 Republican in the House of Representatives. (See also below, *Events, 1962.*)

Legislation, 1962.—The General Assembly approved expenditures of $257 million (exclusive of federal funds) for the fiscal year 1963, including $201 million from the general fund and $56 million from highway receipts.

A series of measures was adopted to prepare for continuity of government in the event of an emergency. These provided for an interim chief executive, succession of judges, a temporary state capital, and temporary seats of government for lesser political units. The lawmakers also established a nine-member Nuclear Energy and Space Commission.

An Advisory Commission on Higher Education was set up to assist the State Budget and Control Board in such areas as curricula, administration, finances, and policy planning. The commission, whose seven members are appointed by the governor, also was authorized to establish a council composed of presidents of state institutions of higher learning to conduct studies into various aspects of the state's higher education scene.

In other business, the legislature passed a supplemental appropriation of $475,000 to expand education television into all of the state's counties; enacted a law to provide for organization and control of business corporations; and referred a number of constitutional amendments to the voters (see below, *Events, 1962*).

Finance.—In the 1962 fiscal year, revenue of $456,417,512 included $277,814,018 from state taxes and $85,132,255 in federal funds. Chief tax yields were the 3% general sales tax ($73,995,406), licensing ($58,188,817), and taxes on motor fuels ($55,410,434) and individual incomes ($27,409,152). Spending of $459,096,465 included $129,987,557 for education, $29,454,005 for health, welfare, and safety, and $85,517,039 for highways.

Education.—In the fall of 1962, public elementary schools staffed by 12,465 teachers enrolled 384,809 pupils; secondary schools staffed by 9,286 teachers enrolled 226,411; and (fall of 1961) 821 teachers in private and parochial schools taught 15,615. College enrollment (fall of 1961) totaled 36,232 in 32 institutions of higher education.

Operating expenditures for public schools in the 1961–62 school year totaled $116,118,318 ($209 per pupil) and capital outlays amounted to $17,212,771. Revenue was drawn chiefly from state funds ($82,651,734) and local districts ($37,718,189). Spending for higher education (1961 fiscal year) comprised $20,308,191 for operations and $9,245,000 for construction and improvements.

Public Assistance.—In the 1962 fiscal year, public assistance payments to a monthly average of 66,418 persons totaled $28,063,632. This amount included $14,998,919 for the aged and $6,241,895 for dependent children.

Transportation and Communications.—With 1,182 miles of highway construction and reconstruction completed in 1961, *highways and roads* on Jan. 1, 1962, totaled 56,721 miles (31,618 surfaced). These served 883,764 *motor vehicles* (as registered on July 13, 1962), including 713,028 automobiles. Operating in the state were (1962) 20 *railroads* (using, 1961, 3,284 line miles of track); 5 regularly scheduled *airlines;* and 69 commercial and municipal *airports and airfields.*

Communications media included (1961) 76 AM and 12 FM *radio stations;* 8 *television stations;* 17 daily *newspapers* (circulation, 495,943); and (Jan. 1, 1962) 165,500 business and 446,200 residential *telephones.*

Labor Force.—The state's labor force in July 1962 included 190,500 agricultural workers. Nonagricultural employment totaled 590,600, compared with 580,400 a year earlier and an average of 587,200 for the 12 intervening months. Of nonfarm wage and salary employees in July 1962, 42.7% were in manufacturing, 17.2% in trade, and 16.3% in government services. Unemployment in mid-July 1962 stood at 42,600, compared with 51,600 a year earlier.

Manufacturing.—Manufacturing engaged an average of 202,159 workers in 1961, and provided a payroll of $647,316,365. Adjusted value added by manufacture (1960) amounted to $1,713,184,000.

LEADING SOUTH CAROLINA MANUFACTURES, 1961[1]

Industry group	Total employees	Total payroll (in thousands)	Value of product (in thousands)
Textiles	122,028	$412,077	$2,029,538
Clothing	29,102	65,657	215,663
Paper and pulp	6,607	32,994	207,519
Electricity	2,352	10,445	139,627
Foundry and machine shops	3,841	14,764	77,758
Furniture	4,923	12,902	60,848

[1] As of June 30, 1961. (Source: Division of Standards and Statistics, South Carolina Department of Labor.)

Mining.—In 1961, South Carolina ranked 43d among the states in the value of its mineral output, with 0.17% of the national total. It was second in output of kaolin, kyanite, and vermiculite, and third in crushed granite. Accounting for over half of the total value of $30,136,000 were stone ($9,827,000) and clays ($6,169,000).

Agriculture.—Cash farm income for the first nine months of 1962 (excluding government payments) totaled $265,198,000, compared with $262,805,000 for the corresponding period of 1961. For the full year 1961, income comprised $109,896,000 from livestock, $269,989,000 from crops, and $17,757,000 in government payments. Principal income sources in 1961 were tobacco, $99,601,000; cotton lint, $67,282,000; eggs, $28,440,000; and soybeans, $26,758,000.

The state's 78,000 farms in 1959 had an acreage of 9,149,000 (2,694,000 in harvested cropland). Livestock on farms on Jan. 1, 1962, included 553,000 cattle, 420,000 hogs, and 5,779,000 chickens, and (1961) 20,143,000 broilers. An average of 124,000 family and 66,000 hired workers engaged in farming during 1961.

SOUTH CAROLINA CROP STATISTICS

Crop (and unit of production)	Average 1951–60	1961	Est. 1962
Corn for grain (1,000 bu.)	20,797	20,055	18,506
Cotton lint (1,000 bales)	528	412	450
Cottonseed (1,000 tons)	222	171	187
Cucumbers (1,000 cwt.)	286	470	392
Oats (1,000 bu.)	13,040	8,856	6,567
Peaches (1,000 bu.)	4,213	7,800	7,000
Pecans (1,000 lb.)	4,601	8,000	400
Soybeans (1,000 bu.)	4,039	12,382	12,160
Tobacco (1,000 lb.)	159,012	151,600	184,800
Tomatoes (1,000 cwt.)	295	603	372
Wheat (1,000 bu.)	3,207	3,710	1,344

(Source: U.S. Department of Agriculture.)

Events, 1962.—In the Democratic primary on June 12, incumbent Olin D. Johnston won the nomination for United States senator over Gov. Ernest F. Hollings. State Rep. Albert Watson was nominated for Congress in the 2d District, and Donald S. Russell was nominated for governor. The Republican convention on March 17 nominated newsman William D. Workman, Jr., to oppose Johnston, and state Rep. Floyd D. Spence, a former Democrat, to run against Watson. Workman and Spence were defeated in the general election in November, but made a remarkably good showing.

In a special election in February, Republican G. Fred Worsham became the second of his party to gain a seat in the state House of Representatives since the Reconstruction. Charles E. Boineau had set the precedent in August 1961.

Four statewide constitutional amendments were approved by the voters in the general election. These authorized dividing the state into forestry districts; reducing residence requirements for suffrage to one year (from two years) in statewide elections and to six months (from one year) on the county level; changing the composition and method of selecting members of the State Board of Education; and increasing the criminal jurisdiction of magistrates. These amendments must be approved by a majority vote of the next legislature before they can become effective.

In economic matters, corn and tobacco production showed the highest per-acre yield on record. The farm cash income from all farm commodities during the year was 2% higher than in 1961. All grain crops were below average, however, due to government restrictions on acreage.

For the fourth consecutive year, new and expanded industry in the state amounted to more than $200 million. The State Committee for Technical Education was operating "crash programs" to prepare workers for specific jobs in new industries. Seventeen of these programs have been completed and others are on the way. The $1 million Greenville Training Center for plants requiring highly skilled personnel was in full operation, as were several other such centers. Potential employees were being trained in metalworking, textiles, woodworking, power sewing, and other highly technical skills.

A trend toward development of a metalworking industry is developing. One out of every five plants built in the state in 1962 was a metalworking facility. More than 300 such companies are now operating successfully in South Carolina.

The integration pattern in South Carolina seems to be slowly changing. Some variety stores now serve Negroes at their lunch counters. At the end of 1962 there was still no integration in any of the public schools of the state, although suits seeking to compel admission of a Negro to Clemson College and of another to the University of South Carolina were pending in federal District Court. On Jan. 28, 1963, after a series of court decisions, Harvey B. Gantt was quietly enrolled at Clemson, thus becoming the first Negro to enter an all-white state school.

Dr. Thomas F. Jones became the 23d president of the University of South Carolina on July 1. He succeeded Robert L. Sumwalt.

University of South Carolina.

SOUTH DAKOTA

A North Central state of the United States, South Dakota ranks 16th among the states in area (land, 76,378 square miles; inland water, 669) and 40th in population (721,000 on July 1, 1962, a 5.9% increase from the 1960 census figure of 680,514). Urban places with populations above 7,500 in 1960:

Aberdeen	23,073	Rapid City	42,399
Brookings	10,558	Sioux Falls	65,466
Huron	14,180	Watertown	14,077
Mitchell	12,555	Yankton	9,279
Pierre (*capital*)	10,088		

Government.—Chief executive and judicial officers in 1962 included Archie M. Gubbrud (Republican), governor, serving a two-year term; Joseph H. Bottum, lieutenant governor until July 9, succeeded by Nils A. Boe (see below, *Events, 1962*); Mrs. Essie Wiedenman, secretary of state; Al Hamre, treasurer; Mrs. Betty Lou Casey, auditor; A. C. Miller, attorney general; M. F. Coddington, superintendent of public instruction; and Alex Rentto, presiding judge of the 5-member Supreme Court.

The South Dakota Legislature, which convenes in odd-numbered years, comprised 25 Republicans and 10 Democrats in the Senate in 1962 and 57 Republicans and 18 Democrats in the House of Representatives.

Finance.—In the 1962 fiscal year, revenue of $150,243,111 included $64,287,622 from state taxes and $54,438,738 in federal funds. Chief tax yields were the 2% general sales tax ($17,303,256), motor fuel taxes ($21,555,338), and licensing ($12,925,242). Spending of $145,302,977 included $21,253,983 for education, $19,374,043 for health, welfare, safety, and social services, and $59,167,758 for highways.

Education.—In the fall of 1962, public elementary schools staffed by 5,370 teachers enrolled 109,359 pupils;

secondary schools with 2,859 teachers enrolled 50,551; and (fall 1961) parochial schools with 642 teachers enrolled 14,639. College enrollment (fall 1961) totaled 15,270 in 16 institutions, including 3 junior colleges and 13 senior colleges and universities.

Estimated public school spending in the 1961–62 school year totaled $59,195,000, including current expenditures of $53,800,000 ($380 per pupil) and capital outlays of $4,500,000. Revenue of $66.4 million was drawn chiefly from state funds ($7 million) and local districts ($47.5 million). Teachers' salaries averaged $3,850 (high school, $4,650; elementary, $3,550). Actual spending for higher education (1961 fiscal year) amounted to $18,998,000.

Public Assistance.—In the 1962 fiscal year, public assistance payments to a monthly average of 20,355 persons totaled $13,550,948. This amount included $7,509,943 for the aged and $3,651,712 for dependent children.

Transportation and Communications.—There were 706 miles of highway construction and reconstruction completed in the 1962 fiscal year. *Highways and roads* on Dec. 31, 1961, totaled 91,645 miles (50,748 surfaced). These served 356,100 *motor vehicles* (as registered Sept. 1, 1962), including 256,971 automobiles. Operating in the state were (Dec. 31, 1961) 7 *railroads* (using 3,909 line miles of track); (1961) 4 regularly scheduled *airlines;* and 71 commercial and municipal *airports and airfields.*

Communications media included (1962) 25 AM *radio stations;* 8 VHF *television stations;* 13 daily *newspapers* (est. circulation, 175,000) and 168 other newspapers (201,000); and (Jan. 1, 1962) 58,700 business and 181,700 residential *telephones.*

Labor Force.—The state's labor force in June 1962 included 95,600 agricultural workers. Covered nonagricultural employment totaled 86,153, compared with 83,642 a year earlier. Of covered nonfarm employees, 32.5% were in trade, 16.4% in service industries, 15.6% in manufacturing, and 15.2% in construction. Covered unemployment on July 14, 1962, stood at 866, compared with 831 a year earlier.

Manufacturing.—Manufacturing engaged 13,440 workers in 1960, including 9,968 in production, and provided a payroll of $63,533,000. Adjusted value added by manufacture totaled $124,564,000. The state's leading industry was food and kindred products, employing 8,447 persons who received $43,568,000 in wages and added $86,531,000 in adjusted value by manufacture.

Mining.—In 1961, South Dakota ranked 40th among the states in the value of its minerals, with 0.24% of the national total. The leading gold producer (Homestake Mine) supplied nearly half of the state's mineral value. The state was first in output of gold, second in beryllium, and third in sheet mica. Output of lignite was 10% less than in 1960.

SOUTH DAKOTA MINERAL PRODUCTION, 1961
(In short tons, except as noted)

Mineral	Quantity	Value
Beryllium concentrate	238	$ 130,000
Clay[1]	249,000	249,000
Feldspar (long tons)	29,354	186,000
Gold (fine ounces)	557,855	19,525,000
Mica, sheet (pounds)	18,086	37,000
Sand and gravel	11,324,000	7,336,000
Silver (fine ounces)	127,000	118,000
Stone	2,806,000	6,642,000
Uranium ore	43,588	495,000
Other minerals	...	9,292,000
Total	...	$42,980,000[2]

[1] Excludes certain clays, value of which is included in "Other minerals." [2] Total adjusted to eliminate duplication of value of clays and stone. (Source: U.S. Bureau of Mines.)

Agriculture.—Cash farm income for the first nine months of 1962 (excluding government payments) totaled $464,374,000, compared with $464,186,000 for the corresponding period of 1961. For the full year 1961, income comprised $484,480,000 from livestock, $178,714,000 from crops, and $44,208,000 in government payments. Principal income sources in 1961 were cattle, $277,472,000; hogs, $105,127,000; wheat, $75,750,000; and corn, $42,694,000.

The state's 56,000 farms in 1959 had an acreage of 44,851,000 (14,236,000 in harvested cropland). Livestock on farms on Jan. 1, 1962, included 3,460,000 cattle, 1,433,000 hogs, 1,711,000 sheep, and 8,584,000 chickens. An average of 78,000 family and 11,000 hired workers engaged in farming during 1961.

SOUTH DAKOTA CROP STATISTICS

Crop (and unit of production)	Average 1951–60	1961	Est. 1962
Barley (1,000 bu.)	11,094	11,832	11,043
Corn for grain (1,000 bu.)	95,493	100,046	113,008
Flaxseed (1,000 bu.)	5,541	5,026	6,058
Oats (1,000 bu.)	94,244	85,510	106,190
Wheat (1,000 bu.)	35,373	32,545	29,824

(Source: U.S. Department of Agriculture.)

Events, 1962.—The death of Republican U.S. Sen. Francis H. Case on June 22 ended 25 years of service in the House and Senate. On July 9, the Republican State Central Committee selected Lt. Gov. Joseph H. Bottum, Jr., Rapid City, as the senatorial candidate, and Gov. Archie M. Gubbrud appointed him to complete Case's term. In the November 6 election, Democrat George S. McGovern, former national Food-for-Peace director, defeated Bottum by a narrow margin. A statewide recount that began on November 26 placed the final plurality at 597 votes.

Otherwise, the general election resulted in sweeping Republican victories for U.S. Representatives Ben Reifel and E. Y. Berry, Governor Gubbrud, and all other state executive officers. The Republicans also retained their control of the Legislature, by 26 to 9 in the Senate and 58 to 17 in the House. Approval was given to three proposed constitutional amendments providing for municipal home rule, annual (instead of biennial) sessions of the Legislature, and right of state entry on private property before the payment of compensation.

Above-average moisture, cattle production, gains in manufacturing, federal expenditures, and an expanding tourist industry created relative prosperity in the state in 1962. Interstate Highway 29 between Sioux Falls and Sioux City was dedicated on September 30, and the State Highway Department announced on November 1 that 220 miles of Interstate routes were open to traffic. The wheat growers of the state on August 30 voted to support (by a 5–1 margin) federal marketing quotas on the 1963 crop. The South Dakota Petroleum Council announced in October that the cumulative crude oil production for the state had reached 877,000 barrels and would pass 1,000,000 barrels before the end of the year. Governor Gubbrud made public on December 12 his proposed budget of $75.3 million (an increase of $8 million) to finance state government operations during the next biennium.

Of greatest interest in social relations during the year were charges of discrimination against Negro airmen stationed at Ellsworth Air Force Base by Rapid City cafes, bars, restaurants, and motels. The results of hearings of the state advisory committee to the U.S. Civil Rights Commission, held in Rapid City on December 11, had not been made public by the end of the year.

Heavy snow in the eastern part of the state during February and March brought immediate hardship, and later floods, but also much-needed moisture for the land. On April 4 a state of flood emergency in 14 southeastern counties was declared by the governor. In May, areas around Corsica, Bonesteel, Wall Lake, and Mitchell were struck by tornado, hail, torrential downpour, and gale-force wind. On July 13 the flooding of Rapid Creek resulted in the temporary evacuation of

some residents in Rapid City, as well as property losses.

In other events, President Kennedy dedicated the Oahe Dam, north of Pierre, on August 17 (see also DAMS). The first two of a projected 150 Minuteman missile-launchers were turned over to Ellsworth AFB on November 6. A feud between Mound City and Herreid, in Campbell County, over the location of Agricultural Stabilization and Conservation Service records remained under consideration by the federal court at year's end.

SOUTH SEA ISLANDS. See FRENCH POLYNESIA; PACIFIC ISLANDS; WESTERN PACIFIC ISLANDS, BRITISH.

SOUTH WEST AFRICA

Administered by the Republic of South Africa, South West Africa is a former League of Nations mandated territory on the southwest coast of Africa. It has an area of 317,725 square miles, and a population (July 1, 1961 est.) of 534,000. Included in the territory is the Caprivi Zipfel (area, about 10,000 square miles; pop., about 14,000), controlled by the South African Ministry of Native Affairs. Walvis Bay (area, 434 square miles; pop. 1960, 12,568), constitutionally part of South Africa's Cape Province, is administered by South West Africa. Included in the territory's population (1960 census) are 427,980 Africans, 23,930 Coloreds, and 73,154 Caucasians. The capital is Windhoek (1960 pop., 35,890, including 19,021 whites). Afrikaans and English are the official languages; German is spoken by many whites.

Government.—The territory is governed by an administrator (Daniel T. du P. Viljoen, appointed September 1953), who is assisted by a 4-member executive and an 18-member Legislative Assembly, elected for a 5-year term by universal suffrage limited to whites. In the election of March 8, 1961, the Nationalist Party won 16 seats and the United National South West Party won 2 seats. South West Africa is represented in South Africa's Parliament by 6 elected members in the House of Assembly, and by 2 elected and 2 nominated members in the Senate. Local government is administered by magistrates in 17 districts, and by the native affairs administrator in Ovamboland, Kaokoveld, and the Okavango Native Territory.

Education.—There are separate school systems for African, Colored, and white children. Number of schools (with enrollments), 1961: African, 98 (13,277); Colored, 48 (5,044); and white, 57 (14,979). Education of African and Colored children is primarily conducted in schools run by religious missions.

Finance.—Government revenue, 1961–62 est.: £15,745,000 (£15,728,000 in 1960–61); expenditure, £17,098,000 (£21,058,040). A decimal currency based on the rand (which equals U.S.$1.40) was introduced by South Africa in the territory on Feb. 14, 1961.

Transportation and Communications.—Transport networks (miles, 1960): railroads, 1,463; main roads, 4,259; secondary roads, 34,000. The main airport at Windhoek is served by South African Airways and Sudweis Lugdiens. In 1961 there were about 20,000 vehicles and 14,829 telephones in the territory.

Economy.—Mining, stock raising, and fishing are the main economic activities. Production for export (tons, 1960): copper-lead-zinc concentrates, 212,974; manganese, 78,378; salt, 67,607; lead-vanadium concentrates, 6,127; lithium ores, 2,719; copper, 2,408; diamonds, 922,422 carats. Fishing is conducted mainly for pilchard (310,000 tons, 1960) and rock lobster.

Foreign Trade.—Total exports, 1960: £20,204,838; imports, £7,311,314. Principal exports, 1960: diamonds, cattle, karakul pelts. South Africa is the territory's chief trading partner.

Events, 1962.—Following the UN General Assembly's decision on Dec. 19, 1961, to establish a Special Committee for South West Africa, Victorio D. Carpio (Philippines), chairman, and Salvador Martinez de Alva (Mexico), vice chairman, were invited by South Africa to visit the territory. In a preliminary report issued on May 26, the two investigators absolved South Africa of accusations that its apartheid policies were a threat to international peace and to the nonwhite population of South West Africa. Following strong criticism by many United Nations delegates, Carpio denied that he had ever participated in the drafting of the statement. On August 31 the committee issued a report to the UN General Assembly stating that it was imperative that the organization take "firm and resolute" action to establish its presence in the territory in order to "prevent a political disaster" there. The UN General Assembly voted on December 14, by a vote of 98 in favor and none against, to send an observer to South West Africa.

SOVIET LITERATURE

More than in previous years, Soviet literature offered in 1962 a picture of various and often competing tendencies which kept undermining the official theory and practice of socialist realism. The traditional novel of industrial construction and agricultural development was on the decline, being represented only by second-rate narratives, such as *The Siren,* by Vadim Ocheretin, or *Tatiana Tarkhanova,* a peasant chronicle by Mikhail Zhestev. In general, the de-Stalinization of literature was one of the most important trends in Soviet literature in 1962. It reached its peak in *One Day of Ivan Denisovich,* by Alexander Solzhenytsin, a frank description of life in concentration camps in the early 1950's, a work that provoked a furor in the whole USSR.

Thematically, tales about scientists and their achievements obtained more success with the readers. *March to the Limit,* by Sergei Snegov, depicts a research institute of physical chemistry, and its hero is a former victim of Stalinist purges —a common figure in Russian contemporary fiction. *Attacking the Thunderstorm,* by Daniil Granin, gives a vivid description of a meteorological station and centers the action around an outsider with the soul and manners of an adventurer and with daring ideas about man's imminent full control of weather. Next to novels about scientists came science-fiction.

One of most striking features of Soviet fiction in general is the steady increase in works on youth. They range from the gay *Too Young,* a novelette by Aleksandr Rekemchuk, depicting the love of a simple lad for a woman architect in the primitive surroundings of the extreme north, to *Earthly Gravitation,* by Yelena Rzhevskaya, whose heroes find themselves on the border of juvenile delinquency and are tormented by sex and unfulfilled desires. Such novels as Mikhail Demidenko's *You Will Be Named Yurka,* the story of an unmarried mother; Aleksandr Andreyev's *Judge Us, Folks,* a bitter tale about an unhappy love affair between a bricklayer and a general's daughter; and Yuri Bondarev's *Stillness,* an interesting account of demobilized soldiers who failed to fit into postwar civilian life under Stalin, all reveal the sufferings and aspirations of the new generation, born and educated in Soviet society.

Even in the light genre which used to be didactic and educational, the new spirit is evident, particularly in *Zhenia, the 20th Century Miracle,* by Tatyana Yesenina, a satire on the "prefabricated ideal hero" and on artificial literary patterns, and in *Face to Face with the Great Bear,* by Vlad-

imir Sanin, a hilarious story of two young couples and their boasting friend on a vacation trip. A number of short stories in periodicals, and *Young Leningrad*, a collection of prose and poetry by literary newcomers, confirm the impression that young persons in the USSR are bored with the propaganda clichés and the dullness of their environment and are looking for something excitingly new in all the arts.

In keeping with the new trend were the two most widely discussed works of the year: *The Notebooks of Tarussa*, edited by Konstantin Paustovski, and the poems of Andrei Voznesenski, a 29-year-old rival of Yevgeni Yevtushenko, one of the poetic leaders of Moscow youth. The Tarussa collection was published in Kaluga, a small provincial town, and sold 75,000 copies in a few days. It contains highly laudatory essays on the emigré Ivan Bunin, on Marina Tsvetayeva, an avant-garde poetess who committed suicide in 1941, and on Vsevolod Meyerhold, the stage director who fell victim to Stalin's purges in the late 1930's. The poems, stories, and illustrations in this remarkable collection, whose editor is an excellent novelist in his own right and a friend of the late Boris Pasternak, show a strong opposition to socialist realism. The notebooks were condemned by Communist critics as a manifestation of "revisionism."

"Bourgeois modernism" was also discovered in *Thirty Digressions from the Poem, a Triangular Pear*, by Voznesenski, who, among other things, depicts his impressions of New York and of his tour of the United States. The significance of his poetry lies in its challenging form and its main theme of search for identity. Although obviously deriving from Mayakovski and the futurists of the 1920's, Voznesenski uses surrealist metaphors, paradoxes, and symbols, and is attracted by innovations of rhythm and meter. His poetic vision of dream and anxiety is in sharp contrast with the flat versification of socialist realists.

Other poets, such as Leonid Martynov, Vsevolod, Rozhdestvenski, and Yevgeni Yevtushenko, despite their individual differences, all belong to the "new wave." Even the reporting on contemporary life and the widely popular sketches of men and places are changing in style and content. Instead of rosy pictures and official optimism, a group of young authors, such as Yefim Dorosh, Vladimir Soloukhin, and, lately, Yevgeni Gerasimov (*The Silk Town*) present sober and often merciless images of Soviet reality.

Translations.—The following is a selected list of books in Russian that have recently been published in English: Ehrenburg, Ilya, *A Change of Season*, tr. by Manya Harari and Humphrey Higgins; Nekrasov, Viktor, *Kira Georgievna*, tr. by Walter N. Vickery; Sholokhov, Mikhail, *Tales of the Don*, tr. by H. C. Stevens; Simonov, Konstantin, *The Living and the Dead*, tr. by R. Ainsztein; Sologub, Fyodor, *The Petty Demon* (Russian publication, 1907), tr. by Andrew Field; Yevtushenko, Yevgeni, *Selected Poems*, tr. by Robin Milner-Gulland and Peter Levi; and *Stories from Modern Russia: Winter's Tales 7*, ed. by C. P. Snow and Pamela Johnson.

SPACE FLIGHT

Advances in space technology, exploration, and medicine during 1962—the fifth year of the space age—are reviewed in the following article in three sections: (1) Astronautics—Space Science and Technology; (2) Space Exploration in 1962; and (3) Manned Space Flight.

For additional information, see Astronomy; Atmosphere Research; and the Index entry, *Space Flight*.

Astronautics—Space Science and Technology

During 1962 the United States moved closer to its goal of reaching the moon with a manned spacecraft before the end of this decade. After a review of the recommendations of a government committee of scientists, the National Aeronautics and Space Administration (NASA) concluded that the Lunar Orbit Rendezvous (LOR) approach would offer the earliest opportunity of a lunar landing and, contrary to the committee's findings, also would probably be a fairly economical scheme in comparison with direct flight and Earth Orbit Rendezvous (EOR) plans.

With the LOR approach, a three-man spacecraft would be launched from the earth directly to an orbit of the moon, send down a two-man Lunar Excursion Module (LEM), rendezvous with it in the lunar orbit, and return to the earth. By May 1962 the LOR decision was pending, and a thorough study of the entire LOR scheme by the Chance Vought Corporation was funded by NASA. After the results of the study were in, NASA let a contract on November 7 with the Grumman Aircraft Engineering Corporation for the building of the LEM.

The NASA budget rose to $3.7 billion for the fiscal year 1963 (ending June 30, 1963), with a prospect of increasing to over $4 billion and possibly over $5 billion for fiscal 1964. The tempo of meteorological and communication satellite research was increased. Environmental and engineering facilities at the various NASA centers were greatly expanded, and at Cape Canaveral construction was started on very large launch facilities, probably to cost $1 billion by 1970. During the next three or four years these facilities will handle the smaller NASA Saturn C-1 rocket, and later the Saturn C-5, the lunar rocket.

The United States continued its cooperation with foreign countries by furnishing them data on satellite construction and actual high-altitude sounding rockets, with a promise of the later availability of the four-stage Scout rocket developed by NASA and capable of orbital launches. In Paris on June 14, delegates from ten nations—France, Great Britain, West Germany, Italy, Spain, the Netherlands, Belgium, Switzerland, Austria, and Sweden—signed an agreement setting up the European Space Research Organization (ESRO). Denmark and Norway indicated they would join later. Pierre V. Augur of France was named director general of ESRO. With a budget exceeding $300 million for the next 8 years, ESRO plans to carry out some 500 space experiments, beginning with 10 sounding rockets in 1963, and including the first European satellites in 1967. The launching vehicles will be supplied by the European Council for the Construction of Spacial Vehicles, established in March 1962.

Space Science.—One of the most fruitful series of research satellites launched in the United States has been the Explorer group.[1] Launched on Feb. 16, 1961, Explorer IX provided new and refined information (since confirmed by other Explorer satellites) on the density of the upper atmosphere. At 420 miles altitude, the density determined by

[1] For additional information on satellites launched in 1962, see the following section, *Space Exploration in 1962*.

changes in the satellite's velocity was 17×3^{-10} molecules per cubic centimeter or one 40-million-millionths of that at sea level. Explorer IX density values were about 10 times lower than those computed from prior satellites. Most of this decrease is attributed to the decrease in solar activity since the peak of the solar cycle in 1958 and 1959. It was also shown that changes in the atmosphere's density at high altitudes were coupled to the 27-day rotational period of the sun and to the occasional violent solar flares that affect the earth's atmosphere.

Vanguard I was injected into orbit on March 17, 1958, with a rotational speed of four revolutions a second. These revolutions have since slowed to 1 in 23 seconds. It is now concluded that this decrease in the spin rate has resulted from the damping effect of the earth's magnetic field. The power of the tiny radio transmitter in Vanguard has also been reduced, it is believed because of a decrease in the output of the solar cells or batteries. These cells are made of very pure silicon. Apparently space radiation degenerates the quality of the silicon and thus decreases the electrical output of the cells. This long-term effect can be circumvented to some extent by coating the silicon cells with special transparent materials that will slow down or stop the space radiation. Many of the existing and future satellites launched in the United States will depend on power from the sun, and it is an important responsibility of space technology research at this time to determine what can be done to desensitize the solar cells to space radiation and, incidentally, make them less sensitive to micrometeoroid impact.

Much has been learned photographically during the last three years, especially about lunar mapping with special telescopes and photogrammetric equipment. The lunar surface is believed to be extremely dry and porous with perhaps a layer of dust accumulated by millions of years of meteoritic impact, which, incidentally, created many of the craters that are seen.

Data must be obtained directly from the lunar surface by unmanned spacecraft, however, before a manned landing is attempted. If the lunar surface should be extremely powdery or have a thin crust, landing a manned spacecraft weighing several tons may be a most difficult, if not impossible, undertaking. Many billions of dollars would have then been spent for lunar exploration without men having the ability to move about the lunar surface.

The Ranger program to obtain television pictures of the lunar surface before impact and to rough-land instruments on the moon has suffered from a variety of malfunctions. No lunar data were received from Rangers III, IV, and V, all launched in 1962. Plans call for at least three Ranger launchings in 1963.

Several small changes in the lunar topography were observed with telescopes during 1962. Soviet astronomers claim that they have viewed several gas and dust clouds coming from craters and have seen changes of the lunar surface between craters. If this is correct, then the moon is not the totally inactive and immutable place that has been suggested by many astronomers.

Launched on Aug. 27, 1962, into escape from the earth, the space probe Mariner II passed the planet Venus at a distance of 21,594 miles from its surface on December 14, when it successfully relayed data 36 million miles back to earth on Venus' atmosphere, surface temperature, and cloud system, the first observations ever made from the vicinity of another planet. Its instruments had previously reported several discoveries from interplanetary space. It recorded a fairly constant plasma or wind of charged particles streaming out from the sun at between 250 and 450 miles a second, occasionally intensified abruptly by solar flares. It also measured magnetic fields in space and recorded a density of interplanetary dust only one ten-thousandth of that found near the earth. As it continued in solar orbit, Mariner II kept transmitting data, all of which will require months to analyze.

Meteorology.—While over 50 percent of NASA's effort went into the Apollo lunar program, scientific space research and the application of satellites still were carried on with increasing intensity. Three more meteorological satellites, Tiros IV, V, and VI, were launched during 1962, each of them contributing substantially to the accumulated data on worldwide cloud and weather formation.

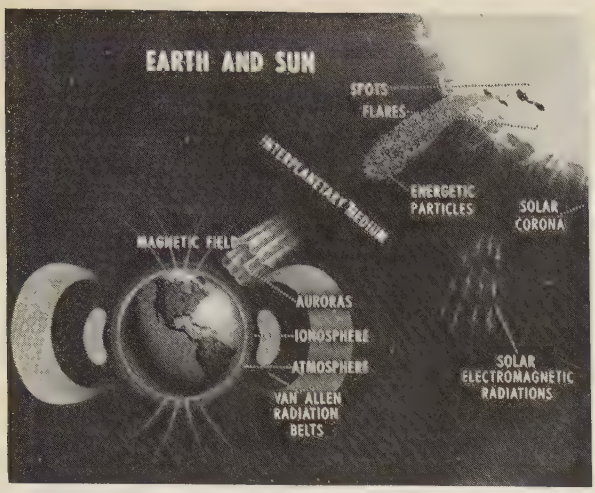
Data reduction is an important element in the weather satellite picture. It has become necessary to increase the effort in analyzing photographs and other data received from the satellites since so much has now accumulated. The U.S. Weather Bureau, the NASA Meteorological Satellite groups, the Goddard Space Flight Center Data Reduction personnel, and the NASA Theoretical Division at Columbia University are all making attempts to analyze cloud data obtained during 1962 by Tiros satellites. Attempts are being made also to analyze the data obtained by sensitive detectors in these satellites of the heat radiation emitted from the earth, which changes with the time of day, depending on sunlight and cloud cover.

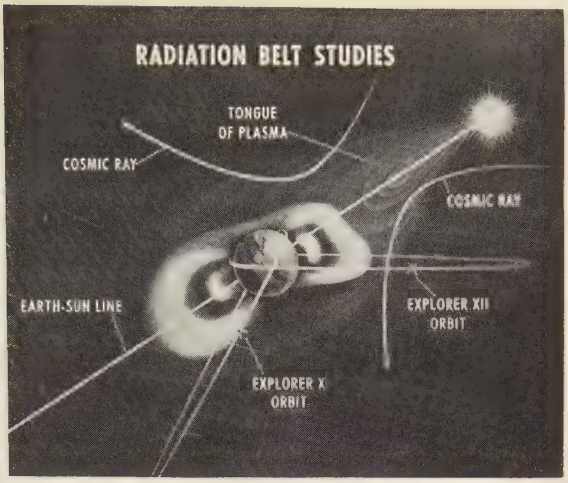
If a correlation can be found between the heat radiation from the earth and the occurrence of clouds, further light will be thrown on the mechanism of cloud formation. Some correlations have already been deduced. Elaborate computers and other data-analyzing equipment are necessary to evaluate whether any trends may exist.

Many scientists believe it would be desirable to have a weather satellite in synchronous orbit at a distance of 22,300 miles from the earth, so that the satellite would be fixed above the point of the earth underneath it. NASA is studying such a satellite, called Aeros. It could scan almost half of the earth at once and would obtain a much more comprehensive cloud picture than is possible with the low, 300-mile-orbit satellites. The difficulties of launching a satellite into such an orbit are great and would require rocket power not presently available for a spacecraft estimated to weigh about 1,000 pounds. At any rate, the present Tiros system and the later Nimbus satellites which will fly about 1964 will have improved instrumentation for measuring the infrared or heat radiation from the earth. Later Nimbus satellites may carry radar detectors to measure cloud distribution at night and distribution of various strata of cold or heated air. (See also METEOROLOGY AND CLIMATOLOGY.)

Communications.—During 1962, Telstar, a 300-mile-orbit satellite, successfully relayed signals from the United States to Europe and back until November 23, when the command circuit for the satellite's television transmitter and receiver failed, though it continued to report other experiments it carried. On Jan. 3, 1963, television tests were resumed successfully. It could transmit for only about a half-hour interval because of its low altitude and quick disappearance over the horizon for any given transmitting or receiving station. All radio signals to and from the satellite require line-of-sight paths. (See also RADIO AND TELEVISION; TELEPHONE.)

NASA's active-repeater communication satellite Relay, a step beyond Telstar, is designed to receive and retransmit television, telephone, and





NASA

(*Left*) **High-energy particles from the sun, signaled by spots and flares, cause variety of disturbances when they reach vicinity of the earth, including auroras, compression of magnetic field, communications blackouts, and changes in Van Allen belts. (*Right*) Drawing shows how strong magnetic field generated by solar plasma acts to deflect cosmic rays away from earth. Explorer satellites have provided much data on this phenomenon. (White areas near earth represent Van Allen belts.)**

other forms of wideband experimental signals between stations in the United States, Europe, and South America. Launched on Dec. 13, 1962, by a Thor-Delta rocket, the 172-pound, octagonal satellite went into a wide-ranging elliptical orbit which also allows it to monitor radiation intensity and effects in the inner Van Allen belt. Initially its batteries charged by solar cells were too weak to power communication experiments, but successful transatlantic tests were made on Jan. 6, 1963.

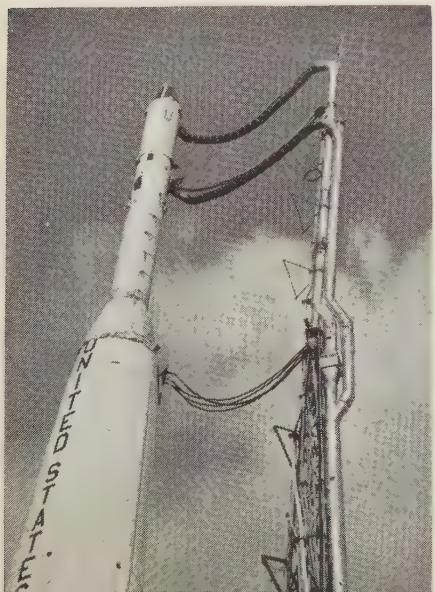
As with meteorological satellites, it would be preferable to have a "stationary" communication satellite at 22,300 miles in the sky. Again, rocket power is deficient at this time to carry out this project. The military have studied the possibilities of such a satellite under the project name Advent. NASA is also interested in such spacecraft and experimental models may be launched soon. It is likely that before the end of this decade, several such satellites with economical lifetimes of a year or more will have been established; communication and other satellites and their components with such necessary lifetimes are being developed.

On Dec. 5, 1962, the United States and the Soviet Union announced a formal agreement to cooperate in certain meteorological, magnetic, and communications satellite observations and experiments.

Launch Vehicles.—The year 1962 was a year of gain (and also some setbacks) for NASA in rocket-vehicle development. After one test launching in 1961, two Saturn S-1 rocket vehicles were launched successfully in 1962 from Cape Canaveral. These stages, each having a thrust of 1.2 million pounds with 8 rocket engines clustered together, will be used in the next five years for the testing in earth orbit of Apollo spacecraft, later to be used for lunar travel. The Saturn S-1 in each test carried two dummy upper stages.

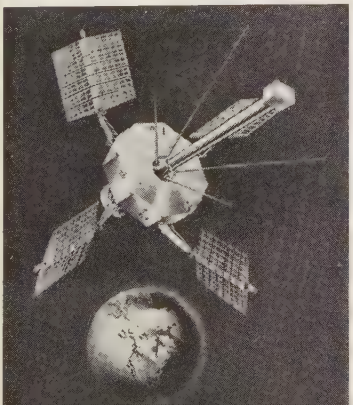
The second 1962 launch, on November 16, carried 95 tons of water in one of the dummy stages. At an altitude of 104 miles this stage was torn apart by explosive charges. The water vaporized in the vacuum of space and immediately condensed into a short-lived ice cloud. The Saturn S-1, which will later become the first stage of the Saturn C-1 vehicle, performed reliably because it used a guidance system, tanks, and engines which have been used in many rocket-vehicle experiments.

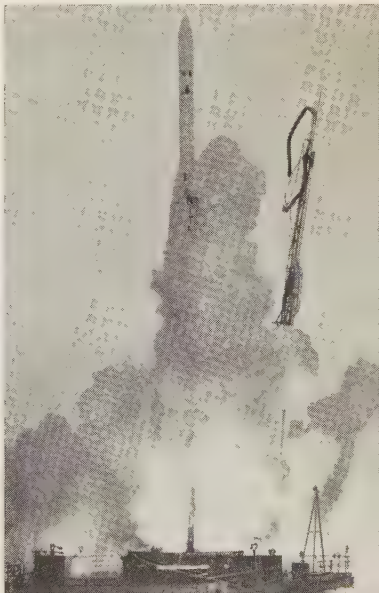
The Saturn C-1 is basically a two-stage vehicle consisting of the S-1 stage and a second stage which uses a cluster of 6 Pratt & Whitney liquid-hydrogen and liquid-oxygen rocket engines, each developing 15,000 pounds of thrust. As used in the C-1, the second stage is called the S-IV. Expected

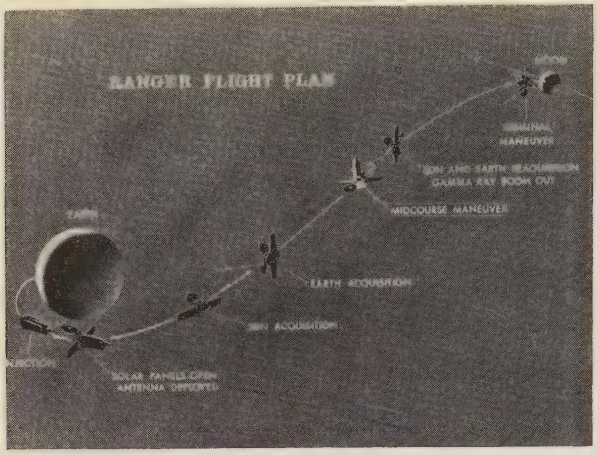


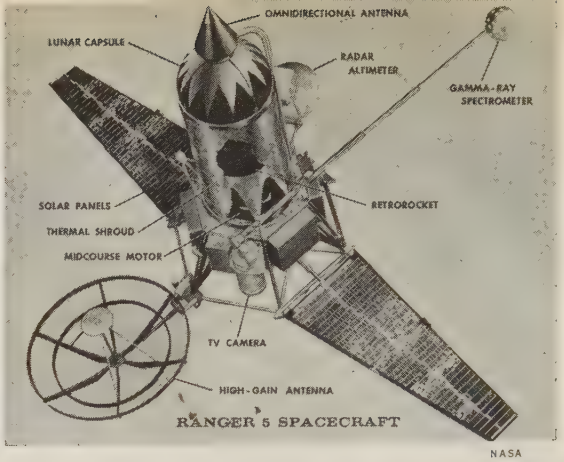
Two Explorers were sent aloft in October to study the kind of space "weather" depicted in drawings at top of page. These pictures show (*left*) the Delta launch vehicle; (*below*) a rendering of the satellite, with four solar-cell vanes extended; and (*right*) the moment of lift-off of Explorer XIV, from Cape Canaveral, Fla., October 2.

NASA









NASA

The Ranger program of lunar investigation involves sending a spacecraft to the moon to take close-up pictures and land an instrumented capsule on its surface. Flight plan and close-up of the vehicle are shown in these drawings. Three Ranger spacecraft were launched in 1962. None achieved its mission, but one (sent aloft on April 23) struck far side of the moon.

to be ready in early 1964, the C-1 should be able to orbit about 25,000 pounds of payload. The Douglas Aircraft Company is building the second stage, as well as a more powerful version called the S-IVb.

The S-IVb will not have a cluster of 6 small engines, but instead will be fitted with one big liquid hydrogen-liquid oxygen engine called the J-2, presently being developed by Rocketdyne Corporation in California. The J-2 engine develops a thrust of about 200,000 pounds. It will be widely used later for other stages with the Advanced Saturn, or Saturn C-5, to be developed by NASA for lunar missions.

The United States suffered a setback in the development of the Centaur rocket. This vehicle, using an Atlas lower stage and an upper stage fueled by liquid hydrogen and oxygen, is counted on to serve as a workhorse vehicle capable of placing up to 8,500 pounds in an earth orbit, 850 pounds in a synchronous orbit, and about 1,300 pounds in escape trajectory to the moon or near planets. The upper stage is powered by two of the Pratt & Whitney RL-10, 15,000-pound-thrust rocket engines.

During the first launching of the Centaur on April 21, 1962, the second stage was destroyed by the disintegration of the aerodynamic shield around the rocket. The effect of aerodynamic forces on this shield had not been foreseen, and the failure should not be attributed to a basic design error in the rocket. However, this moved the vehicle's operational readiness date from late 1963 to late 1964 or perhaps 1965.

Some of the burden that was to have been assumed by the Centaur rocket has been taken over by the Atlas-Agena booster, which has only about two thirds of the payload-carrying capability. Thus, the Surveyor spacecraft to be launched to the moon (to orbit it for pictures and to soft-land instruments) will have to be reduced by about 200 pounds to a weight of about 500 pounds to be ready for a launching by the Atlas-Agena by late 1963 or early 1964.

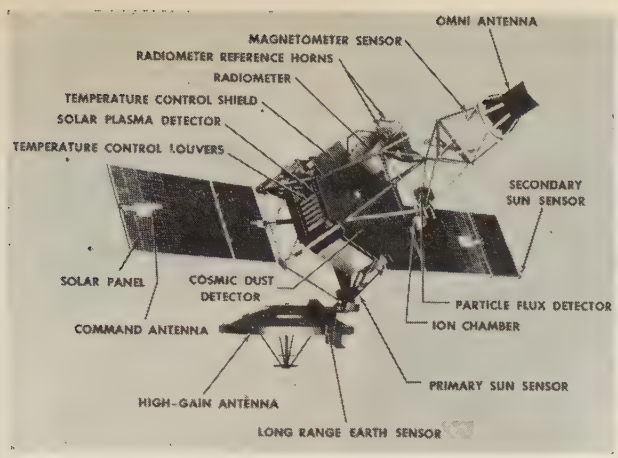
Another rocket vehicle, the two-stage Titan II, of the U.S. Air Force, also has been considered as an interim orbital launch vehicle. This rocket can inject a spacecraft weighing up to 7,000 pounds into a 300-mile orbit. Suitable for the NASA Gemini program, it also could have other uses for high-payload-orbiting requirements, and could launch even larger payloads with the addition of a third, high-energy stage burning liquid hydrogen with oxygen or fluorine with hydrazine. With a third stage, it could launch about 2,500 pounds to the surface of the moon and from 800 to 1,000 pounds toward the planet Mars, as opposed to the less than 500-pound Mariner II that was sent past Venus in December 1962 by the Atlas-Agena vehicle. (See also Missiles.)

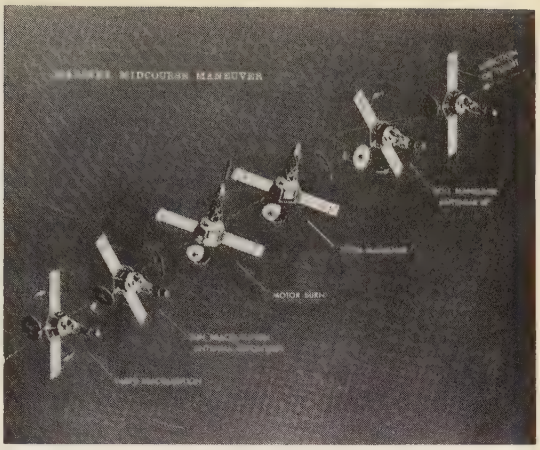
An interesting technological development has taken place in vehicle design. The Douglas Aircraft Corporation has been authorized to proceed with the Thorad, which will consist of a tried and proved Thor booster, about which will be clustered three or more solid rockets. The construction of a small prototype, Thorad, Jr., is under way. This vehicle will have three Scout second stages using solid propellants clustered around the Thor, substantially increasing its capability by permitting it to be loaded with relatively large upper stages. In this way considerably more payload can be carried into a ballistic or orbital trajectory.

The Thorads will be watched with more than casual interest by many scientists and engineers because they will precede development of the Titan III rocket, a Department of Defense vehicle to be used for the launching of the X-20 (previously called the Dyna-Soar) manned spacecraft. The Titan III combination of solid and liquid boosters uses a considerably strengthened Titan II in order to accommodate two very large solid-propellant rockets, each of 120-inch diameter and 60-foot length. These first-stage giant solids will lift the two-stage Titan II off the ground and then shut down after a minute's firing. The Titan II will then ignite and go on into space with the X-20.

An interesting problem parallel to rocket-vehicle design is that of transporting large rockets. Up to 1960, rockets such as the Atlas, Thor, Jupiter, Vanguard, or Sergeant could be carried by truck, railway, or large transport aircraft. With the coming of the Saturn rocket, which will be over 20 feet in diameter, these forms of transportation are inadequate. The diameter of this rocket, and the diameter and weight of large solid-propellant rockets, will be too great to be accommodated by any transporter but a barge or ship. During 1962 a Boeing Stratocruiser aircraft was modified with a very large bulge on top to accommodate second or third stages of the NASA Saturn C-1, and later the C-5 vehicles. However, this strange-looking aircraft called the Guppy is experimental only and thus far no specific steps have been taken to ship rocket stages in this manner.

Propulsion Systems.—The major technical advance in propulsion during the last three years has been the use of liquid hydrogen as a fuel in rocket systems. This is a most energetic fuel, reaching a flame temperature of over 4000°F. with its oxidizing propellant, liquid oxygen. Much





AUTHENTICATED NEWS INTERNATIONAL; NASA

The United States scored one of its greatest successes in space on December 14 when Mariner II passed within 22,000 miles of Venus. Diagram at left identifies components of the craft; delicate in-course maneuver is detailed in drawing at right.

research and development has gone into the problems of handling and pumping liquid hydrogen, about 100 degrees colder than liquid oxygen and proportionally more difficult to handle. It requires special insulation, double-jacketed tanks and pipes, and valves designed not to freeze. Two engines using this propellant combination are now under development—the Rocketdyne J-2 and the Pratt & Whitney RL-10, to be used for the Saturn S-IVb and S-IV stages and the Centaur upper stage, respectively. (See also CHEMISTRY.)

The Rocketdyne Corporation is also building the F-1, a 1.5 million-pound-thrust, kerosene and liquid oxygen rocket engine which is to be the mainstay for the large Saturn vehicles to be used for lunar and possibly planetary flights. Certain difficulties have had to be overcome during the early development of this engine, but it is expected to be available for flight testing by late 1963 or early 1964. A cluster of five of the F-1 engines will be used for the first stage of the NASA Saturn C-5. This vehicle will have a second stage consisting of a cluster of five of the J-2 engines, and a third stage using a single J-2 engine.

The Lunar Excursion Module (LEM) will burn the Titan II type of propellant, nitrogen tetroxide, with the animonia-like chemical, hydrazine, or a mixture of hydrazines. One reason for choosing this propellant mixture is its relatively high boiling point and therefore long-term storage capability in space without the boil-off which occurs with a liquified gas, such as oxygen or hydrogen. The nitrogen-tetroxide and hydrazine combination also is hypergolic, igniting on contact. This eases the problem of ignition (never easy in a rocket engine) for the astronaut in space if he must start or restart the engine.

The LEM will descend to the lunar surface through the application of retro-rocket power from one or perhaps two rocket engines, probably developing about 20,000 pounds of thrust. The lunar surface return vehicle will be a second stage of the LEM system; the landing stage will be left on the moon. Rocket engines of very great reliability must be developed for this lunar excursion mission; there is no margin for error or failure.

Some progress was made in 1962 in the development of nuclear rocket propulsion systems. They have the potential of becoming very powerful systems within the next decade or so, capable of transporting hundreds of tons of spacecraft to an escape trajectory to the planets or the moon. Several "hot" firings were accomplished with the Nerva nuclear rocket reactor. Much was learned about the transfer of heat to the propellant hydrogen gas as it flowed to the very hot reactor. But much is still to be learned about the resistance of materials to the hydrogen and the operation of nuclear-reactor controls to permit changing of thrust levels or the starting and stopping of the nuclear engine. (See also ATOMIC ENERGY.)

One of the most prodigious propulsion developments in the United States is the fabrication of very large solid rockets. During 1962, the Department of Defense and NASA discussed the building of giant solid rockets over 20 feet in diameter and 100 to 200 feet long. Weighing over 5 million pounds each, these rockets could be clustered in units of four to give a rocket vehicle with a capacity twice that of the Saturn C-5, which itself will project about 300,000 pounds into orbit and about 70,000 pounds to escape velocity. The United States has produced many successful solid rockets and new propellant grains twice as efficient as those available only 10 years ago. Great strides are being made also in development of methods of steering and of shipping solid rockets.

The scheme of so-called electric propulsion also has made considerable progress, but only in the building of the propulsion units themselves. These devices look and act like electron or ion guns, producing thrust by ejecting charged electrical particles instead of hot gas. They can eject ions or hot electrically charged gases called plasmas. The propulsion efficiency of these units is very high, from two to ten times that of the nuclear rocket. They are dependent on the availability of a lightweight, very efficient power source, however, and this condition can be met only by nuclear power sources, such as the SNAP-8 power supply, which will deliver about 30 kw. of electrical power, or 60 kw. in a cluster of two. Heat is generated by very hot nuclear reactors and transferred to liquid metals, which in turn drive turbines and electrical generators.

Many problems must be solved, such as the long lifetime and reliability required for these SNAP systems, before they can be applied to electric propulsors. It is estimated that through the use of an electric engine, certain space missions, such as flight to Mars, could be achieved with half the overall vehicle weight that would be necessary for a chemical rocket. But because the thrust of these electrical rockets is very low, the acceleration of the spacecraft would be low and the trip to Mars would be several times longer than with higher-thrust chemical rockets. If efficiency is desired, time has to be traded, and a mission becomes proportionally longer. This raises very great prob-

WIDE WORLD

lems of the durability of nuclear-electromechanical systems operating in space for a year or two continuously.

It is possible to generate electrical power from nuclear sources directly through what is called a thermionic process. In this scheme, electrical power is generated without any moving parts through the use of small elements buried in the hot reactor which generate electricity in a manner analogous to that of a thermocouple.

WIDE WORLD

SPACE EXPLORATION IN 1962—
EARTH SATELLITES AND SPACE PROBES

During 1962 the United States and the Soviet Union announced the successful launching of 36 satellites and space probes.[1] Great Britain and Canada, through cooperative programs with the United States, became the third and fourth nations, respectively, to successfully launch satellites. All of the nonsecret United States launchings described here, with the exception of Anna I-B, were accomplished under the direction of the National Aeronautics and Space Administration (NASA) in its role as civilian agency for the exploration of the upper atmosphere and outer space.

U.S. Launchings. *Tiros.*—Three spacecraft in the highly successful Tiros weather satellite program were orbited in 1962, these being the fourth, fifth, and sixth successful satellites orbited in six attempts. NASA was responsible for technical direction, tracking and data acquisition. The U.S. Weather Bureau was responsible for the operational use of the photographic data and for related research. The basic spacecraft used in 1962 was the same as the Tiros spacecraft of 1960 and 1961.

One camera in Tiros IV (launched February 8) carried a new-type medium-angle lens capable of photographing an area 450 miles on a side. The other camera was equipped with the usual lens, capable of covering an area approximately 750 miles on a side. Tiros IV was launched to continue earth cloud cover observations and to confirm Tiros capability as an ice-reconnaissance vehicle. As a result of a comparison of Tiros photographs with simultaneous photographs taken by aircraft of the same area, it was concluded that Tiros offered a better means of ice study over large areas than did conventional aircraft methods. Tiros IV transmitted 23,000 usable cloud cover photographs during the 121 days of its operational lifetime.

Tiros V was launched on June 19 for coverage of the 1962 hurricane season. Although its medium-angle camera malfunctioned on July 6, the satel-

[1] *Editor's Note:* At least 30 secret military earth satellite launchings were attempted by the United States during 1962. There was speculation that many of them were of the Discoverer series; some were thought to be of the Samos or Midas series. The Defense Department announced early in 1962 that no information would be given about these launchings before the firings, and only the launch vehicle used, and perigee, apogee, nodal period, and inclination if the satellite entered orbit would be announced afterward.

Boilerplate model of Apollo Command Module (left) arrives at the Manned Spacecraft Center, Houston, for land and water tests. Shown beside a Mercury capsule for comparison of sizes, the full-scale iron test vehicle weighs 8,500 pounds. Apollo is due to carry three astronauts to vicinity of the moon before 1970.

In background is mockup of huge Saturn C-1 rocket, which figures importantly in United States plans to place astronaut on the moon.

UPI

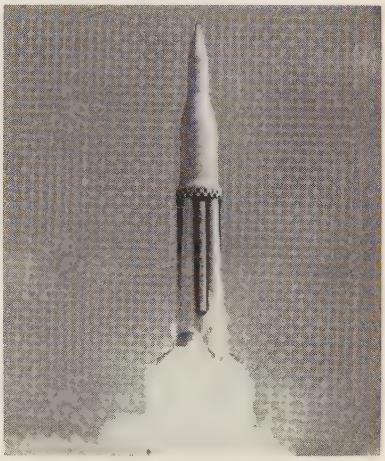
lite observed all tropical storms which occurred during the season. Tiros VI was launched on September 18 to permit maximum coverage of the hurricane season during the last half of the season. Daily international transmission of cloud maps based on photos taken by Tiros IV was started on April 15. The Tiros satellites also contributed materially to the weather studies and predictions made for the United States manned flight events in 1962. (See also METEOROLOGY AND CLIMATOLOGY.)

Telstar.—The Telstar communications satellite, launched on July 10, was a joint government-industry venture, designed and built by the Bell Telephone Laboratories. NASA provided the launch rocket, launching facilities, and initial tracking for Telstar, and was reimbursed $3 million by the American Telephone and Telegraph Company, the system sponsor. Telstar, a communications satellite of the active or repeater type, contained radio receivers and equipment for amplifying and retransmitting received signals.

A live television program prepared by three United States television networks was relayed to Europe via the satellite in the late afternoon of July 23. Several hours later a live television program prepared through the facilities of Eurovision was relayed westward to be shown to millions of Americans over regular television stations. (A short program had been broadcast from the United States to Europe on July 10, and one program each from France and England had been relayed to the United States on the same day.)

The microwave signal equipment of the satellite was capable of handling television, voice, data, facsimile, or any other service commonly handled by ground circuits. The United States ground stations for the Telstar project consisted of transmission and reception facilities at Andover, Me., and reception equipment at Holmdel, N.J. A British station, designed and built by British engineers, was located at Goonhilly Down, England. The French station was at Pleumeur-Bodou. The largest horn antenna ever built was installed at Andover; it had a mouth of 3,600 square feet, weighed about 380 tons, and was 177 feet long. The antenna was covered with a special 15-story-high inflated plastic and fabric radome to protect it from the weather and the wind.

The satellite was powered by 3,600 solar cells that charged nickel-cadmium storage cells. The long, narrow tube carried in the satellite was a special broad-band traveling-wave tube providing a radio-frequency power output of 2¼ watts. Also used were 1,464 diodes and 1,064 transistors. On August 25, Telstar was used to synchronize the master clock in the U.S. Naval Observatory in Washington, D.C., with the master clock of the British Royal Greenwich Observatory to within 10 microseconds, about 100 times the accuracy previously possible. The satellite was highly successful in demonstrating that large volumes of information



Powerful Saturn S-1 rocket rises slowly from launch pad at Cape Canaveral, Fla., April 25, in first of two successful tests in 1962. The rocket, tall as a 20-story building, was intentionally detonated 65 miles up.

NASA

Saturn S-IV rocket, protected by shipping cover, leaves manufacturing facility at Santa Monica, Calif., at start of 3,500-mile journey (via Panama Canal) to Huntsville, Ala. Because of its size, rocket had to be transported by ship and barge. The S-IV will make up second stage of the Saturn C-1 launching vehicle, which will place Apollo spacecraft in earth orbits preparatory to manned lunar flight.

DOUGLAS AIRCRAFT COMPANY, INC.

MARTIN COMPANY

could be handled rapidly and compatibly with other communication systems.

The orbit of Telstar was such that during November and December the satellite was in the shadow of the earth a large portion of the time and the output of the solar cells was insufficient for transatlantic tests. In addition, the command circuit stopped operating on November 23, possibly because of radiation damage to transistors by the artificial electron belt resulting from the nuclear tests conducted in preceding months. By the end of 1962, the satellite was again developing usable amounts of electrical power and engineers had found a command control sequence capable of overcoming the malfunction. On Jan. 3, 1963, test patterns were successfully received and relayed, and shortly thereafter transatlantic transmission tests were resumed. (See also RADIO AND TELEVISION; TELEPHONE.)

Relay I.—Relay I was also an active communications satellite. Shortly after being placed in orbit the spacecraft indicated an abnormal drain on its power supply and the automatic radio relay equipment became inoperative. As a result of ground studies and tests of the satellite, engineers were hopeful near the end of the year that the difficulty could be overcome or minimized by special command control sequences from the ground. Relay made two successful transatlantic test transmissions on Jan. 6, 1963, one of which lasted more than an hour.

OSO I.—The Orbiting Solar Observatory (OSO), launched on March 7, was designed to perform the first comprehensive study of the sun from a satellite, and to obtain thereby the first observations free of the absorption and distortion effects of the earth's atmosphere. The spacecraft was composed of two principal sections. The base was a nine-sided wheel 44 inches in diameter, designed to spin at a rate of 30 revolutions per minute for stabilization. A fan-shaped structure separately mounted about the spin axis and on top of the wheel always pointed toward the sun. Five major experiments to study the X-ray, gamma-ray, and ultraviolet radiations of the sun and their time variations were carried in the pointed section. Eight other experiments concerned chiefly with measurement of micrometeorites, neutrons, and Van Allen belt radiation were carried on the wheel.

A magnetic tape recording system was used to store all data obtained during each 90-minute orbit. The satellite would then transmit the data over a 5-minute period when within range of a ground command system. On May 22, after 11 weeks of excellent operation, a malfunction of the spin controls occurred and the wheel section began spinning at 50 revolutions per minute, so fast that the pointing section could not track the sun. Power was automatically switched off and the satellite could no longer transmit useful information. On June 24, the satellite again began operating properly. Presumably either bearing friction or the earth's magnetic field had slowed the spin rate to the point that the pointing controls were again operative. OSO experienced some solar cell damage after the high-altitude nuclear test of July 9 and it also had some electrical difficulties during the summer, but it continued to furnish useful data on an intermittent basis until November 1962.

Explorer Series.—Explorer XIV (launched October 2), a continuation of the series of satellites launched for the scientific investigation of the earth's upper atmosphere and space, was similar to the highly successful Explorer XII orbited in 1961. A highly elliptical orbit was selected to permit the satellite to study the natural radiation belt of trapped particles, the earth's magnetic field, solar and galactic cosmic rays, the solar wind, and transient magnetic field fluctuations and interactions. The octagon-walled, platform-like spacecraft carried four spring-loaded solar cell panels that snapped into erected position after the satellite was ejected from the launch vehicle.

Valuable scientific results obtained by Explorer XII concerning trapped radiation and magnetic field phenomena near the earth were published in 1962. This information indicated that the Van Allen radiation region was one large area of trapped particles distributed according to their energies and characteristics, rather than a region with two distinct belts. The magnetometer experiment failed to show evidence of the ring current previously reported by Pioneer V and Explorer VI at about 25,000 miles from the earth. The magnetometer findings did agree, however, with results of measurements made by earth stations, and disclosed a transition region about 100 kilometers thick between the earth's magnetic field and that of interplanetary space.

The Explorer XV satellite, orbited on October 27, was similar to Explorers XII and XIV, but both orbit and payload were selected specifically to investigate the artificial radiation belt that resulted from the United States high-altitude nuclear explosion tests during the summer. Failure of a despin mechanism left the orbiting satellite spinning at 60 revolutions per minute, about 10 times the desired rate. The scientific instruments were able to function, however, and it was not immediately apparent whether the scientific objectives were im-

Technician adjusts plasma engine in environmental space chamber before a test run. Such devices produce thrust by discharging electrical particles, but use in space will require nuclear power sources that have yet to be perfected.

Three more Tiros meteorological satellites were orbited in 1962. (*Above*) Photo from Tiros V, launched June 19, shows Red Sea, Nile River and Delta, Suez Canal, and portion of the Mediterranean. (*Right*) High atop gantry at Cape Canaveral, technicians mate Tiros VI to Delta launch vehicle.

paired. The Explorer XVI satellite, launched on December 16, was very similar to the Explorer XIII micrometeoroid satellite launched on Aug. 25, 1961.

Anna.—Anna I-B was the first successful satellite of a series of geodetic satellites planned by the United States to help provide more accurate information about the size and shape of the earth. It was orbited on October 31. (Anna is an acronym for Army, Navy, NASA, and the Air Force, the agencies involved in the program.) The satellite carried four high-intensity xenon gas lights designed to be photographed against the star background as they flashed on and off at designated times. A nickel-cadmium battery solar cell power system was used. Additional electronic tracking and navigational instrumentation was also carried to improve the accuracy with which the orbit could be determined. By photographing the light flashes against a background of known stars from a number of angles, scientists could map distances between ground stations which had simultaneously obtained pictures.

Transit.—Transit V-A was an improved, lighter-weight version continuing the series of navigational aid satellites launched in 1960 and 1961. Launched on Dec. 18, 1962, failure in the power supply or the command equipment prevented the satellite from accomplishing its objectives.

Injun.—Injun III was a successful continuation of the Injun satellite series, built by the State University of Iowa. It was similar to but larger than the 1961 version.

Ranger.—Three attempts to land a spacecraft on the moon as part of the Ranger program failed in 1962. The Ranger spacecraft was designed to perform a number of complicated maneuvers during flight, including orientation maneuvers necessary for taking television pictures during its approach to the moon. The maneuvers were to culminate in the firing of a retrorocket just before impact, and the release of a capsule containing a seismograph for studies of the vibrations of the moon. The 730-pound spacecraft weight included 332 pounds for the retrorocket and capsule system (the capsule system weighed 89 pounds). In the cruise arrangement, with solar panels and the high-gain directional antenna extended, the structure was 17 feet in span and 10.25 feet in height.

Ranger III (launched on January 26) carried television cameras, a separable capsule containing the seismograph, and a gamma-ray experiment. All of these experiments were to obtain information about the structure and composition of the moon. During the early phases of the launch, guidance failed and the spacecraft was placed in its trajectory with sufficient excess speed to cause the probe to miss the moon by about 22,862 miles. In addition, the spacecraft failed to orient itself properly during the last stages of its journey; thus no television pictures were obtained and the capsule was not ejected.

Rangers IV and V also carried the experiments that were on Ranger III. Ranger IV (April 23) suffered an apparent electronics failure that prevented the telemetry from operating properly and prevented the spacecraft from executing its complicated orientation maneuvers. The trajectory was sufficiently accurate, however, for the spacecraft to impact on the back side of the moon about 64 hours after launch. This was the first time that a United States spacecraft had made contact with

Telstar communications satellite, borne aloft from Cape Canaveral by Thor-Delta launch vehicle, July 10, achieved first "live" television transmission across the Atlantic. (See also diagrams of Telstar in the article *Telephone*.)

the moon. No scientific data were obtained, however. The Ranger V (October 18) mission also failed when the spacecraft developed electrical troubles shortly after being launched. The spacecraft apparently failed to receive power from its solar panels, and the battery went dead.

Mariner II.—Mariner II was launched on August 27 toward the planet Venus. A close approach trajectory was selected to afford more time for data collection than would be possible on an impact mission, and to avoid the possibility of introducing terrestrial organisms on Venus. The spacecraft was placed in a parking orbit by an Atlas-Agena booster, and then propelled toward Venus. The Mariner design was a modification of the hexagonal concept used in the Ranger series. The base of the hexagon contained a liquid-fuel rocket motor for midcourse trajectory correction, plus the electronics, power supply, and the command and control systems. A superstructure attached to the base contained the scientific experiments, an omnidirectional antenna, a parabolic high-gain antenna,

and hinged solar panels which contained 9,800 solar cells in 27 square feet of area and were capable of furnishing up to 200 watts of electrical power. The solar cell power system operated in conjunction with a 33.3-pound silver-zinc 1,000-watt-hour rechargeable battery.

Mariner II carried six scientific experiments, including a microwave radiometer and an infrared radiometer to determine the temperatures of the planetary surface and various levels in the atmosphere. A magnetometer was carried to study the interplanetary and planetary magnetic fields. A cosmic-ray experiment, a low-energy solar plasma detector, and a micrometeorite or cosmic dust detector completed the scientific payload. Total weight of the experiments was approximately 40.7 pounds. On September 4, eight days after launch, a planned midcourse correction maneuver involving the firing of the midcourse correction rocket on ground command was executed successfully and altered the flight path to bring Mariner II close to Venus on December 14.

Mariner II passed by Venus at a distance of about 21,594 miles on December 14. Scientific observations were obtained for 42 minutes. Preliminary results from these observations and from those made during the trip through interplanetary space included findings that micrometeorites were about 10,000 times more dense around the earth than in interplanetary space; that the solar wind (a flow of hot ionized gases apparently coming from the inner corona of the sun) was present at all times, although subject to changes in intensity; and finally, since no magnetic field around Venus was detected, that the magnetic field, if any, was probably less than about 10 percent of the earth's field.

An earlier attempt (July 22) to launch Mariner I toward Venus failed when erroneous computer information indicated the Atlas-Agena launch vehicle was straying off course and it had to be destroyed.

(For details of manned orbital flights conducted as part of Project Mercury, see the following section on *Manned Space Flight.*)

International Satellites. *Ariel.*—Ariel (launched April 26, 1962) was the first international satellite. Under a cooperative agreement, British scientists designed, built, and tested the experiments carried in the satellite, and NASA built the spacecraft and was responsible for the power supply and the launch operation. The satellite carried three experiments devised to gather new data on the ionosphere, including measurements of electron temperatures and densities, and ion temperatures and masses. Two more experiments were designed to study solar radiation in the X-ray and ultraviolet spectral regions. A sixth experiment was devised to detect and measure cosmic rays. The payload operated well until after the nuclear tests in July. Ariel experienced severe damage to its solar cells and was no longer furnishing useful data by the end of the summer.

Alouette.—Alouette, a Canadian-designed and -built satellite, was the first spacecraft to be wholly designed and built by a nation other than the United States or the Soviet Union. Launched from Point Arguello, Calif., on September 28, it was also the first orbital shot by NASA from the west coast of the United States. The Canadian Defence Research Telecommunications Establishment built the spacecraft and supplied three of the experiments. The primary experiment studied the ionosphere from above, using a specially developed flight version of a swept-frequency sounder similar in operation to the ground-based sounding experiments that had observed the ionosphere from be-

The American and Russian interplanetary probes launched in 1962.

low for many years. Two other experiments measured the radio noise produced within the ionosphere and the galactic or radio noise that appears to originate in outer space. The National Research Council of Canada furnished a cosmic-ray experiment capable of detecting electrons, protons, and alpha particles.

The spacecraft carried two antennas, erected after the spacecraft was placed in orbit. One of these, a 150-foot radio antenna, was believed to be the longest ever used on a space vehicle.

Alouette was highly successful in attaining its scientific objectives, and it proved the value of this technique for scientific investigation of the upper regions of the ionosphere. This satellite also suffered some damage to its solar cells from the summer nuclear tests, but the reduced electrical power available was compensated for by a reduction in duty cycle, and the satellite was still in operation at the end of the year.

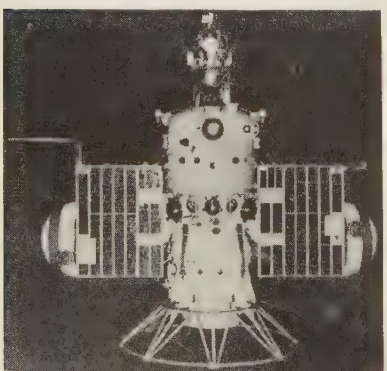
USSR Launchings. *Cosmos.*—The Soviet Union's Cosmos series of satellites was begun on March 16, 1962, with the successful launch of Cosmos I after a seven-month period of inactivity. Succeeding launches followed at an average rate of about one every three weeks. Twelve were launched during the year. No information was released about the shape, dimensions, or weight of the spacecraft, although there were indications that they were larger than the early Sputniks. The Cosmos series was described in the Soviet press as scientific satellites aimed at collecting physical data in space near the earth in preparation for more manned flights near earth and to the moon and planets. One satellite, Cosmos IV, launched on April 26, was reportedly brought down on command on April 29, after more than 72 hours in orbit, making it the first Soviet recovery since that of Maj. Gherman Titov's *Vostok II* spacecraft in August 1961.

Mars I.—The Mars I spacecraft was successfully launched by the USSR on November 1 on a trajectory toward the planet Mars. Information released by the Tass news agency indicated that the one-ton spacecraft was launched from an orbiting Sputnik in a manner similar to that used for the Soviet Venus probe launched on Feb. 12, 1961.[2] Original estimates indicated that the flight to Mars would take a little over seven months. The spacecraft reportedly carried a camera and transmitters for sending back photographs of Mars.

(For an account of the USSR's manned orbital flights, see the following section on *Manned Space Flight.*)

Other Space Activities.—A high-altitude test of a nuclear device of about 1.4 megaton yield was conducted by the United States on July 9, 1962, about 250 miles above Johnston Island in the Pacific Ocean. This resulted in the creation of an artificial radiation belt at a somewhat lower altitude than the natural Van Allen inner belt, and an enhancement of the radiation in the natural belt. Preliminary indications were that the effects would be noticeable for several years and that the intensity of radiation was sufficient to cause rapid deterioration of unprotected solar cells on spacecraft spending appreciable amounts of time in the region. (See also ATMOSPHERE RESEARCH.)

The Transit IV-B and TRAAC satellites launched in 1961 were silenced by the new belt, and the Ariel satellite was severely damaged, al-



Launched on November 1, this Soviet spacecraft (the Mars I) is due to reach the vicinity of the red planet in June 1963 after a journey of more than seven months, according to Soviet announcement.

AFP FROM PICTORIAL

[2] This Soviet Venus probe was successfully launched from a parking orbit into the proper trajectory for an approach to Venus. After the spacecraft had been on course for several days, however, its radios stopped transmitting, and no scientific information about Venus was obtained. NASA announced on Sept. 5, 1962, that the USSR had tried to send a probe to Venus on Feb. 4, 1961; the spacecraft was placed in a parking orbit, but attempts to eject the probe toward Venus failed, and the Soviet Union renamed the craft Sputnik VII and classified it as an earth satellite with a payload weight of 14,292 pounds, the heaviest object placed in an earth orbit. NASA also revealed on Sept. 5, 1962, that four other Soviet attempts at sending up space probes had failed. Two shots at Mars (Oct. 10 and 14, 1960) did not achieve parking orbit, and two attempts to reach Venus (Aug. 25 and Sept. 1, 1962) were placed in earth orbit but were not ejected.

though it continued to operate on an intermittent basis. The Telstar satellite indicated that some deterioration of its solar cells had occurred. This damage was small, however, as the cells were of a new design affording considerable protection against the radiation. Alouette also was slightly damaged.

Sounding-rocket launchings and research were continued by many countries in 1962, including Australia, Canada, France, Italy, and Japan. Pakistan, Norway, and Sweden started or continued research programs of sounding-rocket launchings in their countries through cooperative arrangements with the United States.

MANNED SPACE FLIGHT

The two suborbital flights into the space environment in 1961 by American astronauts Alan B. Shepard, Jr., and Virgil I. Grissom, and the two orbital flights of the Soviet cosmonauts Yuri A. Gagarin and Gherman S. Titov, were followed in 1962 by the orbital flights of Americans John H. Glenn, Jr., Malcolm S. Carpenter, and Walter M. Schirra, Jr., and those of Russians Andrian G. Nikolayev and Pavel R. Popovich. (See table in the foregoing section, *Space Exploration in 1962.*) The 1962 flights, along with related developments in space medicine, are discussed below.

Mercury Flights.—Marine Lt. Col. John H. Glenn, Jr., made the first American orbital flight on Feb. 20, 1962, in the Mercury spacecraft *Friendship 7*. Lift-off was at Cape Canaveral, Fla., at 9:47 A.M., EST. After three orbits, touchdown was made at 2:43 P.M., EST, in the Atlantic Ocean southeast of Cape Canaveral, near Grand Turk Island east of the Bahamas. Glenn and the capsule were retrieved within only a few miles of the target spot by the U.S.S. *Noa*, and Glenn was brought to Grand Turk Island for medical examination and debriefing.

It was an impressive psychophysiological

AMERICAN AND RUSSIAN ASTRONAUTS WHO ORBITED THE EARTH IN 1962

John Herschel Glenn, Jr., the first American astronaut to orbit the earth, was born July 18, 1921, in Cambridge, Ohio. He grew up in nearby New Concord and attended Muskingum College there for three years before entering the naval air cadet program. He flew 59 Marine fighter missions in the Marshall Islands campaign in World War II and 90 missions in the Korean War, winning five Distinguished Flying Crosses and 19 Air Medals. In 1954 he became a fighter test pilot for the Navy and set a transcontinental west-to-east jet flight record in 1957. With the other American astronauts, Marine Lt. Col. Glenn was selected for the Mercury space flight program on April 9, 1959. He was married in 1943 to Anna Castor of New Concord; they have two children.

Malcolm Scott Carpenter was born May 1, 1925, in Boulder, Colo., the son of a chemist. Carpenter entered the Navy's air cadet program at Colorado College in 1943 but had not completed it at the end of World War II. He then studied aeronautical engineering at the University of Colorado and in 1949 rejoined the Navy, completing flight training at Pensacola, Fla., and Corpus Christi, Texas. In the Korean War he served as a pilot with a patrol squadron based on Hawaii, flying missions in the Yellow Sea, South China Sea, and Taiwan Strait. In 1954 he trained as a naval test pilot and undertook many jet flight-test projects. Navy Lt. Comdr. Carpenter was married to Rene Price in 1948; they have four children.

Andrian Grigoryevich Nikolayev was born Sept. 5, 1929, in the village of Shorshely on the middle Volga River in the Chuvash Autonomous SSR. Son of a collective farmer who died in 1944, he studied at a forestry school and was a lumber foreman in Karelia until he went into the Soviet Army in 1950. Trained in the Air Force, he graduated as a pilot in 1954 and was assigned to the Moscow Regional Antiaircraft Defense. An Air Force major, in March 1960 he was transferred to cosmonaut training and in 1961 was decorated with the Order of the Red Star. Major Nikolayev is unmarried.

Pavel Romanovich Popovich, son of a sugar refinery worker, was born Oct. 5, 1930, in the town of Uzin on the Dnieper River in the Ukrainian SSR. He was graduated from an industrial-technical school in the city of Magnitogorsk in the Urals in 1951, volunteered for the Army, and was transferred to aviation school. As a fighter pilot in the Air Force, he was first assigned to the Soviet Arctic. Lt. Col. Popovich is said to have been the first to join the cosmonaut training unit, and has received the Order of the Red Star. His wife, Natasha, a former civilian stunt flyer and flying instructor, works as a design engineer; they have a daughter.

Walter Marty Schirra, Jr., was born in Hackensack, N.J., March 12, 1923, the son of a World War I Army pilot, who became a civil engineer. Schirra studied at Newark College of Engineering (1941) and was graduated from the U.S. Naval Academy in 1945. He served on the cruiser *Alaska*, on the staff of the Seventh Fleet, and won his Navy wings at Pensacola, Fla. As an exchange pilot with the Air Force he flew 90 combat missions in the Korean War and won the Distinguished Flying Cross and two Air Medals. He helped develop the Sidewinder missile, became a test pilot at the Patuxent River (Md.) Naval Air Test Center, and has been promoted to commander in the Navy. He was married to Josephine C. Fraser in 1946; they have two children.

achievement that Glenn, in this first manned orbital test flight of the Mercury spacecraft, was able to perform a number of tests while in orbit, in addition to the successful accomplishment of the flight. He was able to control the attitude of the spacecraft, using the earth's horizon for orientation. He described the beauty of the horizon and observed a tan-to-buff-colored luminous layer above the colorful red-blue atmospheric horizon.[1] Glenn made numerous photographs of the horizon and of the earth from its day and night sides. He reported that he could recognize such cities as New Orleans and Savannah, and also the city of Perth, Australia, at night, illuminated by its citizens to greet him.

Glenn's report that on each orbit he saw luminous particles resembling fireflies near the spacecraft when it came out of darkness into sunlight aroused considerable curiosity as to their origin. One explanation was that they were water, paint, or other particles coming from the spacecraft and reflecting the sunlight.

Glenn's flight was also a great success in its contributions to space medical knowledge. Many biosensor recordings were made of his blood pressure, respiration, body temperature, and the temperature inside his space suit. Glenn found the state of weightlessness pleasant; it even facilitated such tasks as using his camera, which he could leave hanging in midair while he performed other activities. He was in voice communication with numerous tracking stations, and the events of the entire flight were reported to the whole world.

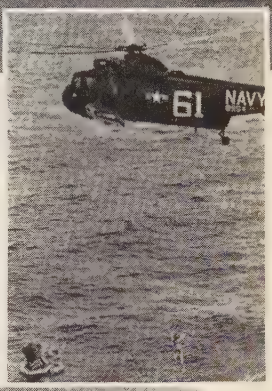
Only three months later, on May 24, 1962, Navy Lt. Comdr. Malcolm Scott Carpenter entered the Mercury spacecraft *Aurora 7* for the second American orbital flight. The countdown reached zero at Cape Canaveral at 7:45 A.M., EST. After three orbits Carpenter landed at 12:41 P.M. in the Atlantic Ocean. Due to his intensive occupation with scientific observations, he overshot the target area for landing by approximately 250 miles. Listeners around the world were on tenterhooks until he and the capsule were sighted by a pilot about an hour after landing. Some two hours later, Carpenter was taken aboard the U.S.S. *Intrepid*. Subsequently he was flown to Grand Turk Island for debriefing and physical examination.

Carpenter's flight was characterized by extensive exploration of the space environment. Like Glenn, he observed a layer of buff-colored light above the red-blue band of the horizon. Measuring the wavelength of this faint light led to its identification as airglow, the light emitted by atomic nitrogen and oxygen brought into excited states in the upper atmosphere by solar ultraviolet radiation. Airglow gives the night sky a slight luminosity, but is missing in the space sky, accounting for its total blackness. One or more dust layers may also exist in the upper atmosphere.

Both before and after sunrise, Carpenter observed the same mysterious luminous particles, reported earlier by Glenn. By knocking on the side of the spacecraft Carpenter was able to cause more particles to appear, which confirmed the theory that these "fireflies" or snowflakes were actually a condensation of moisture emitted from the cooling system of the spacecraft, or particles of dust or insulation from it, and not space phenomena.

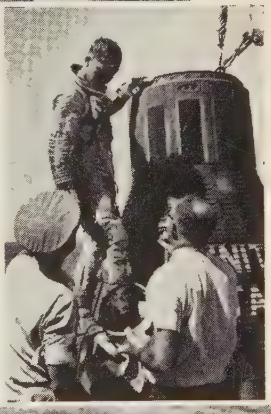
Navy Commander Walter M. Schirra, Jr., made the third American orbital flight on Oct. 3, 1962,

[1] In his analysis of Glenn's report, John A. O'Keefe, assistant chief of NASA's Theoretical Division, Goddard Space Flight Center, attributed this upper luminous layer to airglow, to some auroral phenomenon, or to multiple reflections in the spacecraft's window system.



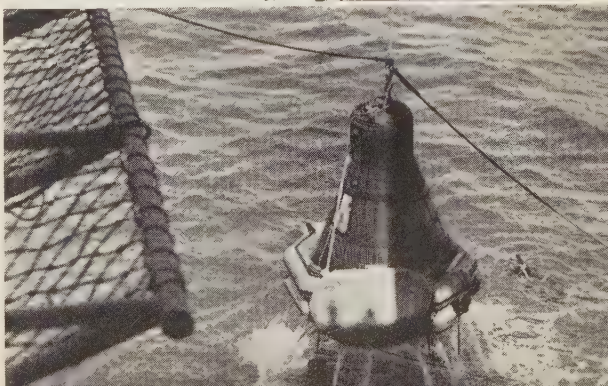
Scott Carpenter became the second American astronaut to orbit the earth, May 24. (*Above*) In photo made from a color negative taken by the astronaut, Atlas booster falls away from the spacecraft, *Aurora 7*. (*Right*) Helicopter hauls Carpenter from sea at conclusion of three-orbit flight. Recovery was delayed when capsule overshot target area. (*Below*) Safely aboard the carrier *Intrepid*, Carpenter receives congratulatory message from President Kennedy.

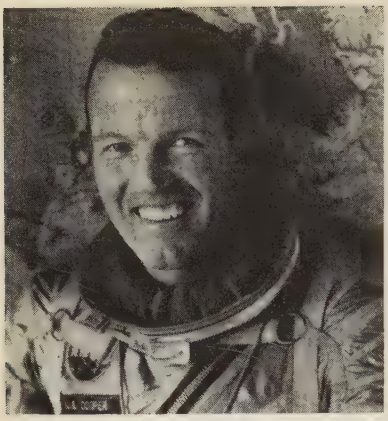
WIDE WORLD



Walter Schirra, the third American to fly an orbital mission in 1962, circled the earth six times on October 3 in the most successful flight to date. (*Right*) Schirra alights from his spacecraft, the *Sigma 7*, on the deck of the carrier *Kearsarge*. The astronaut made a bull's-eye landing within four miles of the vessel in the Pacific recovery zone after a 9 hour 14 minute flight that was remarkably trouble free. (*Below*) Dripping *Sigma 7*, with Schirra inside, is lifted out of the sea by a boom aboard the *Kearsarge*. Frogman may be seen floating in water.

U.P.I.





Astronaut L. Gordon Cooper, Jr., an Air Force major, was chosen in December to make the first full-day flight in the United States space program. Mission was set for early 1963.

NASA FROM UPI

Leroy Gordon Cooper, Jr., was born in Shawnee, Okla., on March 6, 1927, the son of a career air officer. He graduated from high school in 1945 and served in the Marine Corps until 1946. After three years' study at the University of Hawaii he won a commission in the Army and subsequently transferred to the Air Force. He completed flight training in 1949 and flew in a fighter-bomber group in Germany. Cooper was graduated in 1956 from the Air Force Institute of Technology in Dayton, Ohio, with a degree in aeronautical engineering, and the following year from the Air Force Experimental Flight Test School at Edwards Air Force Base, Calif. Major Cooper was engaged in performance test work at Edwards AFB before his selection as an astronaut. He and his wife, the former Trudy Olson of Seattle, Wash., have two daughters.

in the Mercury capsule *Sigma 7*. Lift-off was at Cape Canaveral at 8:15 A.M., EDT. After six orbits, successful recovery was made by the U.S.S. *Kearsarge*, 275 miles northeast of Midway Island in the central Pacific Ocean at 5:29 P.M., EDT. The flight was completely successful in all aspects. Schirra was able to utilize drifting flight for the conservation of attitude-jet fuel, and showed no ill effects from weightlessness even when the capsule was yawing freely for considerable periods of time.

***Vostok* Flights.**—In the Soviet Union, on Aug. 11, 1962, at 11:30 A.M., Moscow time (4:30 A.M., EDT), *Vostok III*, carrying Maj. Andrian G. Nikolayev, rocketed into orbit, presumably from the Baikonur cosmodrome in the Kazakh SSR; then at 11:02 A.M., Moscow time (4:02 A.M., EDT) on August 12, Lt. Col. Pavel R. Popovich was launched into nearly the same orbit aboard *Vostok IV*. The cosmonauts later reported they were within four miles of each other at one point. On August 15 at 9:55 A.M., Moscow time (2:55 A.M., EDT), *Vostok III* landed in the Kazakhstan desert south of the city of Karaganda after completing 64 orbits of the earth and covering a distance of 1,615,600 miles. Six minutes later, *Vostok IV* landed, after orbiting the earth 48 times for a distance of 1,243,000 miles. The cosmonauts were ejected from their capsules and landed by parachute.

Much of what has been learned from these flights was reported by the Russian doctors of cosmic medicine at the International Symposium on Basic Environmental Problems of Man in Space, held from October 29 to November 2 in Paris. The scope of the medical biological measurements was considerably enlarged over those of the earlier *Vostoks*. The experiments included writing tests and mathematical calculations, and no essential difference was observed between flight and preflight capabilities in these. Generally, "the cosmonauts led quite an 'earth-like' way of life; they ate, drank, slept, maintained communication with the earth and each other, and conducted scientific research and observations. Their recovery also was normal. No negative aftereffect was noted either after this or the precedent flights."

The two cosmonauts did not experience the nauseous discomfort in the weightless state reported by Titov. It is interesting to note that they kept, essentially, the same cycle of work, rest, and sleep as on earth, and that they slept when it was night over the USSR. In addition to the medical studies made, bacteria, insects, and various types of plants were placed on board the ships so that the biological effects of radiation on them might be studied.

Space Medicine.—The orbital flights made in 1962 have considerably advanced the art of manned space flight. It was proved that space vehicles could be effectively controlled by the astronaut; deviations in the life-supporting systems could be corrected; sensorimotor performance of the astronauts under conditions of weightlessness was not impaired; weightlessness of nearly four days could be tolerated and had no adverse effect on vegetative functions such as circulation, digestion, and sleep; and no harmful radiation effects were noted during these flight durations in the altitude range up to 175 miles.

The manned orbital flights have proved that man will play a vital role in the scientific exploration of the physics of space. A manned vehicle is superior to an unmanned research probe in certain respects, when, for instance, the visual capabilities of the human retina can be used.

All in all, the medical data recorded and telemetered in 1962, as well as the astronauts' navigational performance, justify an optimistic view concerning more extensive space operations in the future, although by no means have all medical problems been solved. Selection and training will attain even greater importance in order to cope with the problems of longer flights. Special attention is being given to a possible individual disposition of the astronauts to nausea in the weightless state, as experienced by Titov in 1961.

The NASA Manned Spacecraft Center in Houston, Texas, under its director, Robert R. Gilruth, named nine new astronaut candidates on Sept. 17, 1962.[1] They have been assigned to a comprehensive training program designed to prepare them for prolonged orbital flights in the two-man Gemini spacecraft, and for the planned flight to the moon. The U.S. Air Force also has begun to train a number of astronautical candidates to pilot such winged spacecraft as the X-15 and the X-20 (Dyna-Soar).

Intensive space medical work is being done in aerospace medical institutions of the Air Force, Navy, Army, and NASA, and at universities and appropriate industrial organizations. For instance, space cabin simulator experiments were made in 1962 for periods up to 30 days, to study psychophysiological reactions in a confined compartment, and to test the best type of atmosphere, the best level of air pressure, nutrition, sanitary equipment, fire hazards, and possible hazards from such particle rays as those found in the Van Allen radiation belts. In this connection, numerous American satellites of the Discoverer type and Russian satellites of the Sputnik and Cosmos types have telem-

[1] The civilan candidates selected were Elliot M. See, Jr., and Neil A. Armstrong; Air Force officers were Maj. Frank Borman, Capt. James A. McDivitt, Capt. Thomas P. Stafford, and Capt. Edward H. White, II; Navy officers were Lt. Charles Conrad, Jr., Lt. Comdr. James A. Lovell, Jr., and Lt. Comdr. John W. Young.

WIDE WORLD

etered important information back to earth for medical evaluation, and microbiological specimens exposed to the space environment have been brought back for study in the laboratory. Hazards from meteoritic material thus far have not been experienced. In fact, the Russian twin orbital flights were under way on August 12, the time of the annual maximum intensity of the Perseid meteor shower.

Planetary Environments.—Closely related to space medicine and astrobiology (the science concerned with native life on other celestial bodies) were the two launchings of planetary probes in 1962, the American Mariner II toward Venus and the Russian Mars I toward Mars. The close-up recordings of planetary environmental data, such as those received on December 14 from Mariner II's flight past Venus, may solve some open biomedical questions concerning the hazards to be encountered by visiting astronauts, and also the possibility of life on these planets. With regard to the latter, a biotelescanner was developed in 1962 by W. G. Glenn of the U.S. Air Force School of Aerospace Medicine at Brooks Air Force Base, Texas, which can gather samples of lunar or Martian surface material and transmit coded information about their possible biotic character back to earth. In view of the possibility of exolife, sterilization of lunar and planetary probes has become a major problem in biomedical space research, in order to avoid contamination of the neighboring celestial bodies before we can determine whether there is any form of life outside our earth.

SPAIN

Situated in the Iberian Peninsula of southwestern Europe, Spain is strategically located at the western entrance to the Mediterranean Sea. Metropolitan Spain has a total area of 194,232 square miles and a population of 30,817,000 (mid-1962 est.), including the Balearic Islands (1,936 sq. mi.; pop., 444,269) and the Canary Islands (2,808 sq. mi.; pop., 457,075). Principal cities and populations (1961): Madrid, the capital, 2,295,548; Barcelona, an important industrial center, 1,572,853; Valencia, center of the rich Levantine agricultural area, 504,747; Seville, 445,763; Saragossa, 329,692; Málaga, 304,275; Bilbao, 301,795; and Murcia, 251,360. Spanish is the principal language, but Catalan is spoken in the northeast and Basque in the north.

Government.—Spain is a nominal monarchy, but the actual head of state is the caudillo, Generalissimo Francisco Franco Bahamonde, who serves as chief of the army, prime minister, and leader of the only political party, the Falange. He is assisted by ministers with administrative and advisory functions. The Cortes (441-member Parliament) is the legislative body, but its powers are restricted to the approval of official decrees. Generalissimo Franco was granted life tenure as chief of state by the Law of Succession of March 31, 1947. This fundamental law also provided for a regency council to select Franco's successor with the approval of the Cortes.

Education and Religion.—School enrollment, 1959–60: 4,971,666. Number of schools (with enrollments): 96,734 primary (3,751,489); 2,161 secondary (672,422); 12 universities (26,948, not including 2,050 postgraduate); technical (17,439); seminaries (25,245). Principal religion: Roman Catholic (99.9% of the population).

Finance.—Government revenue, 1961: 81,067 million pesetas (72,651 million in 1960); expenditures, 73,898 million (67,032 million). The peseta is valued at U.S.$0.016. National debt: 135,705.2 million pesetas at the end of 1961 (124,579 million at the end of 1960). Gross international reserves: $859 million (up $269 million during 1961).

Transportation and Communications.—Transport networks (miles, 1961): railways, 11,198 (8,354 broad guage; 1,765 electrified); main roads, 81,548. Merchant marine (1961): 1,825 craft totaling 1,780,713 tons. National airline: Iberia, providing regular service with Europe, Africa, and the Americas. Principal international airport: Barajas (Madrid), receiving 30% of arriving travelers in 1961. Motor vehicles (1961): passenger cars, 50,254; omnibuses, 1,048; trucks, 15,657; motor cycles, 78,650. Telephones: 1,930,297 (1961); radio stations, 195 (1959); television stations, 8 (1961); radios, 2,464,000 (1959); television sets, 400,000 (1962).

Economic Indicators.—Gross national product: 497,658 million pesetas in 1962 (469,118 in 1961). Index of industrial production (1929–31 = 100): 368 in 1961 (338 in 1960). Index of agricultural production (1953–55 = 100): 118.4 (est.) in 1961 (115.4 in 1960). Cost-of-living index (1958 = 100): 111 in 1961. Number of unemployed persons: 250,000 in 1961 (2% of labor force).

Manufactures and Minerals.—Chief industrial products (metric tons, 1960): woolens, 12,133; cotton cloth, 94,900; silk yarn, 44.6; rayon, 1,644; paper, 345,324; cork, 69,700; copper ore, 88,062; iron ore, 4,899,763; cement, 5,212,296; anthracite, 2,510,170; coal, 11,262,966; lignite, 1,763,625; iron pyrites, 1,766,643; lead ore, 68,111; manganese ore, 22,530; potash, 1,655,002; sulfur, 537,944; zinc, 151,806; silvinite, 1,729,501; titanium, 28,087; quartz, 135,977; electric power, 19,838 million kw.-hr. in 1961 (4,602 thermal).

Agriculture.—Chief crops (thousands of quintals, 1961): wheat, 34,311 (35,203 in 1960); rye, 3,512 (3,853); rice, 3,947 (3,614); barley, 17,437 (15,622); oats, 4,949 (4,312); maize, 10,668 (10,116); potatoes, 49,000 (46,198); tomatoes, 12,000 (11,848); sugar beets, 37,000 (35,716); cotton, 3,200 (2,170); wines, 21,256,500 hectoliters; oranges, 13,896,500; lemons, 877,300; almonds, 1,551,000; olives, 23,666,900 (table olives, 683,700).

Tourism.—Number of tourists: 7,455,262 in 1961 (6,113,255 in 1960), spending $450 million.

Foreign Trade.—Total exports, 1961: 44,312.5 million pesetas or $709 million ($725 million in 1960); imports, 68,250 million pesetas or $1,092 million ($721 million). Principal exports (in million pesetas): raw materials (7,921); manufactures (12,453); foodstuffs (23,093). Principal imports (in million pesetas): raw materials (18,422); manufactures (19,828); foodstuffs (4,989). Chief customers (with value of goods received in million pesetas): United Kingdom (7,223); West Germany (6,283); United States (4,225); Italy (3,759); France (3,385). Principal suppliers (with value of imports provided in million pesetas): United States (16,493); West Germany (7,115); France (5,730); United Kingdom (4,917); Saudi Arabia (3,901).

Events, 1962.—Twenty-three years after the conclusion of the Civil War, Spain appeared to be undergoing a profound transformation in all aspects of its life. The marriage of Prince Juan Carlos to Princess Sophia of the Hellenes was celebrated in Athens on May 13, but the prospect of

their accession to the Spanish throne remained uncertain. A meeting between Generalissimo Franco and Don Juan de Bourbon, pretender to the throne and father of Prince Carlos, was predicted, primarily to settle the question of succession. It was believed that the prince would not accept the throne if he had to bypass his father.

Prospects for a meeting appeared especially good following a major reorganization of the Spanish cabinet on July 11. The principal change was the appointment of Capt. Gen. Agustín Muñoz Grandes to the newly created post of vice president of the cabinet, making him Franco's automatic successor as premier. The selection of Muñoz Grandes, a monarchist who commanded strong army support, appeared to pave the way for either Don Juan or Prince Carlos to become chief of state in the event of Franco's death.

The cabinet reorganization was also seen by some observers as an opening toward a more liberal period for Spain. A monarchist intellectual, Manuel de Fraga Iribarne, became minister of information and tourism in place of Gabriel Arias Salgado, an antimonarchist notorious for his policy of strict censorship. A wide relaxation of press censorship became evident in succeeding weeks.

There was widespread agitation in Spain during the year, both in labor and student circles. Student demonstrations at the University of Barcelona in February featured anti-Franco signs. Four students were later given 4-to-7-year prison terms for subversive activities. On May 10, about 1,500 students gathered on the campus of the University of Madrid and demanded the right to hold a general assembly, as well as the release of the students who had been arrested.

In April, when negotiations between mine owners and the national syndicates lagged, strikes—illegal in Spain—broke out among miners and industrial workers in Vizcaya, Guipúzcoa, and Asturias. On May 4 the government was forced to declare a state of emergency in the three northern provinces in an effort to end the strikes. Government spokesmen charged that outside agitators and Communist broadcasts from Prague were responsible for the labor unrest, but the Roman Catholic hierarchy intervened to charge the Franco regime with laxity and inefficiency in dealing with the strike. The bishops championed the right of the workers to strike in an editorial in the May 12 issue of *Ecclesia*, the Catholic Action weekly, which is the only publication in Spain not subjected to official censorship. Franco, in turn, accused "lay organizations of the church" of encouraging the strikers. Although José Ruíz Solis, head of the Falange and the syndical labor organization, agreed to a rise in coal prices to enable the employers to increase wages in Asturias, and urged termination of the strike, it was not until May 28 that the strikers began to return to work.

Early in June, a meeting took place in Munich of more than 100 leaders of the opposition to the Franco regime. There were reports of an apparent reconciliation between two bitter political enemies, José María Gil Robles, prominent rightest leader, and Rodolfo Llopis, exiled leader of the exiled Spanish Socialist Party. The Socialists were reported to have dropped their traditional opposition to a restoration of the monarchy in order to assist in the formation of a common front against the Franco regime. On their return from Munich on June 9, Robles and several other prominent rightists were arrested and sentenced to exile or forced residence in the Canary Islands. As a result of his arrest and exile, Robles resigned on June 17 from Don Juan's advisory privy council, lest he cause embarrassment to the monarchist cause.

On August 11, as an answer to the labor troubles, the Spanish government announced a plan to organize meetings between labor and management to arrange collective bargaining. However, another outbreak of strikes occurred among Asturian coal miners late in the month. The government charged that they were stimulated by Communists, Socialists, and anarchists and represented political agitation rather than genuine economic and social unrest. In the face of the renewed agitation, the government in September adopted new procedures in dealing with labor conflicts. Strikes remained illegal but labor disputes were now recognized as normal occurrences which required legal means of settlement. Ten days later, Franco promised the coal miners that his regime would seek "a just distribution" of the national income and provide equality of opportunity and sacrifice for all. At the end of the year, in his New Year's message, Franco announced that the daily minimum wage would be raised from 36 pesetas (about U.S.$0.58) to 60 pesetas (about U.S.$0.90).

A development with far-reaching economic and political consequences was the application of Spain on February 9 for association with the European Economic Community, or Common Market, with the eventual objective of full membership. Common Market countries provided 29% of Spain's imports and took 40% of its exports in 1961. In March the government lifted curbs on the transfer of funds by foreign investors, removing another barrier to foreign investment in Spain.

In the summer, United States economic aid was ended when Spanish reserves had increased to $1,100,000. On July 9, ten leading Spanish and Portuguese banks announced formation of a consortium to promote economic expansion in the two countries. Later it was revealed that the consortium would also include United States, British, and French bankers. On November 25, free elections, the first since the Civil War, were held for representatives in the official chambers of commerce.

On May 10, U.S. Ambassador Robert F. Woodward presented his credentials to Generalissimo Franco. He succeeded the late Anthony J. Drexel Biddle.

On September 26, flash floods, following a nine-hour rainstorm, swept through industrial centers near Barcelona, killing 381 persons, injuring an additional 1,000, sweeping away 1,500 homes, and damaging property worth an estimated $30 million. It was the worst natural disaster in the modern history of Spain.

SPANISH AMERICAN LITERATURE. See Latin American Literature.

SPANISH LITERATURE

The overwhelming fact of 1962 was the 400th anniversary of the birth of the most productive, dynamic, and contradictory of the geniuses of the Spanish stage, Lope de Vega. Lope's plays were performed throughout the Spanish-speaking world, and his works were reissued in a steady stream.

Publishing in Spain is still restricted almost entirely to Barcelona and Madrid, and a considerable proportion of the total consists of Spanish imitations and translations of pulp fiction. These shortcomings are complicated by the omnipresent and capricious censorship, which still requires that all manuscripts receive approval prior to publication, and which has even resulted in such oddities as a novel that was approved only to be withdrawn after it had won an important prize.

Fiction.—Outstanding among the new novels was Gonzalo Torrente Ballester's *La pascua triste* (third volume of the trilogy *Los gozos y las sombras*), an image of life in a Galician village of 30 years ago. It has been called one of the most important books of the last 30 years. This interest in the problems of rural existence was also evident in Miguel Delibes' *Las ratas*, a portrait of the gray and ordinary life of Castilian villagers.

The much-heralded *Tormenta de verano* (Eng. tr., *Summer Storm*), by the young Juan García Hortelano, was sharply criticized for its pessimism. A portrayal of the completely shallow and hedonistic existence of the wealthy, it is interesting for certain technical novelties and for the lifelike creation of a leading character who attempts to break free from the cynical privilege of his world. Another novelist influenced by modern techniques is the young Luis Martín-Santos, whose *Tiempo de sueño* was very successful. The Nadal Prize, which has been awarded to a number of unknowns who later became very successful, went to a 22-year-old student, J. A. Payno, whose *El curso* is an autobiographical treatment of an academic year seen from a variety of perspectives.

The 1961 National Novel Prize went to Bartolomé Soler, a prolific veteran, for his *Los muertos no se cuentan*. Francisco Ayala, who has emerged as a distinguished novelist during his exile, published a second edition of *La cabeza del cordero*, a collection of short stories which has become a classic since its original publication in 1949. Another collection of interest was Ignacio Aldecoa's *Arqueología*.

Poetry.—In 1962 a number of editions of collected works were published, such as José Hierro's *Poesías completas*, Gabriel Celaya's *Poesía* and Dionisio Ridruejo's *Hasta la fecha*. The National Poetry Prize went to Luis López Anglada, a mature and prolific poet who has won a number of awards, and the Premio March, another of the most important prizes, was conferred upon the veteran Gerardo Diego. Jorge Guillén, a writer of classic stature, received the Belgian International Literature Prize; another of Spain's remarkable galaxy of elder poets, Emilio Prados (d. 1962), published *Signos del ser*.

Theater.—Commercial theater continued to be dominated by a few names, chief among them Alfonso Paso, whose facile comedies attract audiences consistently. Before the end of 1962, his *Cena de matrimonio* had reached more than 1,000 performances. Miguel Mihura also has a formula, but his comedy is subtler, more human, and frequently leavened with fantasy. His latest, *La entretenida*, followed this pattern. A younger dramatist, Lauro Olmo, aroused considerable interest with his neorealistic and crudely powerful *La camisa*, a forthright picture of life in the slums, with a strong admixture of satirical humor.

Nonfiction.—Several interesting critical works appeared in 1962, among them the final volume of Eugenio de Nora's vast *La novela española contemporánea*, and *Baroja y su mundo*, a two-volume biography, iconography, and series of monographs by leading critics, under the editorship of Fernando Baeza. This concentration on the generation of 1898 continued with Gonzalo Fernández de la Mora's *Ortega y el 98*, awarded the National Essay Prize. Julián Marías published *Los españoles*, a thoughtful study of the dichotomy between liberal progressiveness and reactionary fanaticism which has plagued Spain throughout her history. José Bergamín's *Al volver* is the reflection of a distinguished essayist on his return to Spain after an absence of 20 years. Finally, the venerable chronicler of Madrid, Ramón Gómez de la Serna, was honored with the March Essay Prize in recognition of one of the most abundant and stimulating of present-day literary productions.

Translations.—Among the works that appeared in English translation in 1962 were: Anon., *The Life of Lazarillo de Tormes*, tr. by W. S. Merwin, with an introduction by Leonardo de Morelos; Blasco Ibáñez, Vicente, *Blood and Sand*, tr. by Frances Partridge; Ferrater Mora, José, *Unamuno: a Philosophy of Tragedy*, tr. by Philip Silver; García Hortelano, Juan, *Summer Storm*, tr. by Ilsa Barea; García Lorca, Federico, *Selected Poems*, with bilingual text, ed. by the poet's brother, Francisco García Lorca, and Donald M. Allen; Goytisolo, Juan, *Island of Women*, tr. by José Yglesias; Lera, Angel María de, *The Wedding*, tr. by Stephen Kaye; Ortega y Gasset, José, *Man and Crisis*, tr. by Mildred Adams; Quevado y Villegas, Francisco Gómez de, *The Scavenger*, tr. by Hugh A. Harter; Salazar Chapela, Esteban, *Naked in Piccadilly*, tr. by Patricia Crampton; Salvador, Tomás, *Men and Walls*, tr. by James Curtis; Sánchez Ferlosio, Rafael, *The One Day of the Week*, tr. by J. M. Cohen; and Unamuno y Jugo, Miguel de, *The Tragic Sense of Life*, tr. by J. E. Crawford Flitch.

SPANISH MOROCCO. See MOROCCO.

SPANISH SAHARA. See SPANISH TERRITORIES.

SPANISH TERRITORIES

Spain's overseas territories, consisting of enclaves and islands along the northern and western coasts of Africa, have an area of 114,194 square miles and a total population of 472,439 (1960). They are constituted as provinces (or parts of provinces) of Spain, with the residents enjoying the same rights as the citizens of metropolitan Spain.

Throughout 1962, Spanish garrison towns on the Mediterranean coast of Africa continued to serve as a target for Moroccan nationalists. The Moroccans declared that they had to take defensive measures to protect their economy from the competition offered by the Spanish free ports of Ceuta and Melilla. A Moroccan decree prohibited Spaniards or Moroccans who worked in Morocco from residing in Melilla, and Moroccans planned an accelerated housing program at Nador to discourage residence in Melilla. Whiskey smuggling soared when Morocco levied a 150% tax on imported alcoholic beverages early in the year. The smugglers purchased tax-free whiskey and other goods in Ceuta or Melilla and landed them along the 375-mile Moroccan coast between Tangiers and Melilla. The Moroccans also discouraged travel to the Spanish ports by keeping transients waiting for police and customs formalities.

Spain built up military defenses in the garrison towns, following large-scale arms shipments into Morocco, and was reported to have more troops in them than were in the 35,000-man Moroccan Royal Army. Spain also maintained forces on constant alert to meet trouble in any African territory.

A meeting between Spanish and Moroccan officials was held in November to discuss areas of friction between the two countries. These included disputed fishing rights off the Moroccan coast and insistent Moroccan claims to the Spanish enclaves in Morocco and to the Spanish Sahara. (See also MOROCCO.)

Spanish North Africa.—Spanish possessions along the Mediterranean coast of Morocco have a total area of 82 square miles and a population of 152,768 (1960). The most important are the ports of Ceuta and Melilla on the northern coast. Ceuta (area: 7 sq. mi.; 1960 pop., 73,182), located at the eastern entrance of the Strait of Gibraltar, is governed as part of the Spanish province of Cádiz and contains a military base. Melilla (area: 5 sq. mi.; 1960 pop., 79,056) is governed as part of the Spanish province of Málaga and is important economically for trade, fishing, and boatbuilding.

Spanish West Africa.—The territory was divided in July 1958 into the provinces of Ifni and Spanish Sahara, both under the jurisdiction of the commander of the Canary Islands naval base.

Ifni.—Formerly a Spanish enclave on the southwest coast of Morocco, Ifni has an area of 579 square miles and a population of 49,889 (1960). The indigenous population consists principally of Berber tribes. The capital and principal town is Sidi Ifni (1960 pop., 12,751, including 8,201 Europeans and many transients).

Spanish Sahara.—Except for the coastal region, the Spanish Sahara (area: 102,702 sq. mi.; 1960 pop., 23,793, including 5,304 Europeans) is largely desert inhabited by nomads. Formerly divided into two zones, Río de Oro (area: 71,042 sq. mi.) and Saguia el Hamra (area: 31,660 sq. mi.), it is now organized into a northern district around Aiun (1960 pop., 5,251), a middle district around Villa Cisneros (1,961), and a southern district around La Guera. Major economic activities are coastal fishing (the 1961 catch was valued at 35.2 million pesetas) and ranching. Value of exports, 1961: 85,000 pesetas; imports, 106,800.

Equatorial Region.—The region consists of the provinces of Río Muni and Fernando Póo, under the jurisdiction of a governor general. Number of schools (with enrollments), 1960: 118 primary (19,680); 3 secondary (268). Exports, 1960: 2,000 million pesetas; imports, 920 million.

Río Muni.—Formerly part of Spanish Guinea, Río Muni was constituted a separate province in 1960. Situated on the Gulf of Guinea, it has an area of 10,045 sq. mi. and a 1960 pop. of 183,377. Bata (1960 pop., 27,024, including 1,534 Europeans) is the capital and principal city. It is also a port, has the only airport, and is the radial center of the limited highway network of 85 miles of paved roads. Principal cash crops: coffee (3,894.7 metric tons in 1960–61); cocoa (3,250.1 tons); bananas; palm oil and kernels; and hardwoods.

Fernando Póo.—The province (area, 786 sq. mi.; 1960 pop., 62,612) was established in 1960. It comprises the islands of Fernando Póo (1960 pop., 61,197) and Annobón (1,415) in the Gulf of Guinea. The capital and principal city is Santa Isabel (1960 pop., 37,237, including 3,358 Europeans). The principal occupations are farming, fishing, and cattle raising. Leading cash crops, 1960–61: cocoa (21,982 metric tons); coffee (1,610.7 tons). Fernando Póo has a good system of hard-surfaced roads and an airport at Santa Isabel.

SPICES

Spice consumption in the United States topped the 200 million-pound mark in 1961 for the first time. Imports, plus domestic production, minus reexports, totaled 205,009,000 pounds, compared with 185,245,000 pounds in 1960.

Gains in 15 of 22 major imports accounted for most of the increase in 1961. Mustard seed imports were up nearly 14 million pounds; sesame seed gained 5.5 million pounds; capsicums (red-podded peppers) increased 2 million pounds; and paprika and cinnamon were each up 1.5 million pounds. Partially offsetting the gains was a 5-million-pound decline in pepper imports. Cloves, cumin seed, and poppy seed also decreased by about 1 million pounds each.

Mustard seed made a sizable gain on the domestic as well as the import scene. United States production rose to 23,834,000 pounds in 1961 from 18,920,000 pounds the year before. Capsicum production declined, however, from 11,340,000 pounds in 1960 to 10,140,000 pounds in 1961.

U.S. IMPORTS OF MAJOR SPICES, 1961

Spice	Pounds	Value
Pepper	34,262,000	$14,947,605
Mustard seed	43,297,000	3,808,292
Sesame seed	22,895,000	2,974,984
Cinnamon	13,249,000	2,980,286
Paprika	9,632,000	2,631,096
Capsicums	7,661,000	1,903,408
Caraway seed	6,979,000	1,105,443
Poppy seed	6,645,000	796,570
Nutmegs	3,930,000	3,094,846
Ginger	3,666,000	654,566

U.S. Department of Commerce import figures for leading spices in 1961 are shown in the accompanying table.

SPORTS, GAMES, AND SHOWS

International controversies and internal disputes in the United States were added ingredients in 1962 to the already stimulating and varied world of sports. World championships in skiing, hockey, weightlifting, and basketball were hampered by the injection of world politics, and the formation of federations in three sports in the United States challenged the authority of the Amateur Athletic Union over Americans in international meets.

Despite these off-the-field distractions, there was plenty of arresting competition during the year. The National League pennant race produced another thrilling play-off between those arch rivals, the Giants and Dodgers, but, as has become customary, the New York Yankees again emerged as the world champions in baseball.

Three teams from Ohio dominated college basketball, and a Philadelphia star, Wilt Chamberlain, did likewise in professional basketball. Professional boxing, already under fire because of the infiltration of racketeers, was the object of nationwide criticism because of the merciless and fatal beating suffered by Benny (Kid) Paret of Cuba in the unsuccessful defense of his welterweight title against Emile Griffith in New York on March 24. Boxing also labored under the burden of having an ex-convict, Sonny Liston, rise to the pinnacle of the sport by becoming the world heavyweight champion.

Turf fans continued to be fascinated by the vagaries of horse racing and were vicariously delighted when Kelso became the fifth millionaire thoroughbred in history by capturing the $54,000 Governor's Plate at Garden State Park on December 1.

Harness racing continued its international expansion, and Su Mac Lad, who finished second in the major international trots at Yonkers and Roosevelt raceways, gained "harness horse of the year" honors because he was otherwise a consistent winner, taking 7 of his 13 starts during 1962. Ronnie Ferraro, 19, an apprentice for most of the year, was the top jockey of 1962, and Bob Farrington was again the leading sulky driver.

The Montreal Canadiens gained the National Hockey League regular-season title for the fifth straight year, and the Toronto Maple Leafs captured the Stanley Cup for the first time since 1951. The world amateur hockey championship, played in Colorado, was won by Sweden, but five teams originally entered did not compete. The withdrawals mainly represented protests over the fact that a team from East Germany was not allowed to enter the United States to participate.

The international dispute over East Germany and the Berlin wall also involved the world Alpine skiing and world weightlifting championships. The skiing, held in Chamonix, France, lost its championship designation because East Germans could not get their travel permits, and the weightlifting tournament, scheduled for Hershey, Pa., was transferred to Budapest, Hungary, for the same reason. The world basketball tournament, held in Manila

in December, lost its championship designation because the Filipinos would not allow the Yugoslav team to compete.

Australia, perennial champion in tennis and a power in swimming, tried its luck at yachting, mounting an expensive challenge for the America's Cup in a series against the defender from the United States. But in September the United States won the series off Newport, R.I., 4 races to 1, to remain undefeated in the 111-year-old competition.

In motorboating, *Miss Century 21,* owned by Willard Rhodes and driven by Bill Muncey, won the five major trophies—the Diamond Cup, Gold Cup, Governor's Trophy, President's Cup, and the Spirit of Detroit.

An unexpected power arose from the west coast in college football. The University of Southern California, picked to finish among the second best 10 teams in the country in the preseason polls, was named the top team in the final balloting in both major news service surveys.

In professional football, the Green Bay Packers maintained their mastery over the National Football League. The Packers lost only one game in the regular season (to Detroit) and then scored a repeat victory (16–7) over the New York Giants in the championship game for their second straight title. In the American Football League, the Dallas Texans ended the Houston Oilers' two-year reign with a 20–17 decision in a play-off game that required two overtime periods.

Jack Nicklaus made a bundle of money in his first year as a professional golfer and won the United States Open championship as well. In a television "spectacular," Nicklaus defeated the two other top pro golfers of the year—Arnold Palmer and Gary Player.

In tennis, an Australian, Rodney (Rocket) Laver, became the first man to win the four major world titles in one year since Don Budge of the United States achieved the grand slam in 1938. Laver climaxed his great year by leading the Aussies to a 5–0 victory over Mexico in the Davis Cup challenge round (making it four in a row for Australia), and then joined the professional circuit.

A New Zealander, Peter Snell, lowered the world record for the mile to 3:54.4, and an American, Jim Beatty, became the first man to break the 4-minute barrier indoors. Beatty was clocked in 3:58.9 in Los Angeles on February 10. Another United States athlete, John Uelses, became the first man to pole vault 16 feet, scaling 16 feet ¼ inch in the Millrose Games at Madison Square Garden, New York.

The United States defeated the Soviet Union, 128–107, in another of their annual two-day dual track meets. It was the fourth victory for the Americans over the Russians in as many meetings. The USSR women outscored the American women, 66–41, for the fourth straight time. A two-day attendance of 153,500 was recorded at the meet in Palo Alto, Calif.

These notable achievements by Americans in track and field were somewhat clouded by the running dispute between the Amateur Athletic Union and coaches in the National Collegiate Athletic Association. The coaches, seeking a greater voice in the selection of American athletes for international meets, formed a federation to challenge the authority of the AAU in this field. (The NCAA coaches also organized federations in basketball and gymnastics in opposition to the AAU.) Finally, President Kennedy stepped into the picture with the announcement that he had appointed Gen. Douglas MacArthur to arbitrate the dispute. (After meeting with the two sides on January 18–19, 1963, MacArthur announced that a general agreement on cooperation had been reached.)

The Ohio teams which dominated college basketball were Ohio State University, rated tops in the final news service polls; Cincinnati, which beat Ohio State in the NCAA tournament final; and Dayton, which won the National Invitation Tournament in New York's Madison Square Garden. In addition, a professional team from Cleveland, the Pipers, defeated the Kansas City Steers in a best-three-of-five play-off series to win the title in the new American Basketball League, which, however, ended operations in December 1962. The highlight of the National Basketball Association season was the 100 points scored in one game by the champion record-breaker, Wilt Chamberlain of the Warriors, against the New York Knickerbockers on March 2.

And the baseball season, with both 10-team major leagues scheduling 162 games, had the distinction of producing the longest game in point of time in big league history. The Yankees and Tigers played for 7 hours in Detroit on June 24, with New York winning, 9 to 7, in 22 innings. (The previous record had been 5 hours 19 minutes for a 20-inning game on July 5, 1940, when the Brooklyn Dodgers defeated the Boston Braves, 6–2.)

Following are summaries of some of the developments in major sports activities in 1962, together with listings of champions and of many outstanding performances. Team or residential affiliations are provided for each winner, where possible, but are indicated only once for a multiple winner—the first time his name is listed.

(*Left*) Maury Wills of the Los Angeles Dodgers, shown stealing second in game at Houston in June, went on to register 104 stolen bases during the 1962 season to surpass Ty Cobb's record of 96. (*Right*) San Francisco Giant players whoop it up after defeating Dodgers in final game of National League play-off, October 3. Here, teammates greet relief hurler Billy Pierce.

BASEBALL

The Los Angeles Dodgers suffered a monumental collapse late in the 1962 baseball season in a duplication of the 1951 season. Again the San Francisco Giants (in New York in 1951) tied them at the top of the standings on the last day of the regular season, and again the Giants beat the Dodgers in a three-game play-off for the National League pennant. While the 1951 World Series was an anticlimax to the regular season, the 1962 Series had still more thrills in store.

The New York Yankees finished first in the American League for their 27th pennant. They were favored to beat the Giants, weary from the additional strain and pressure of the play-off. With both leagues up to 10 teams (the American League had expanded in 1961), the teams played 162-game schedules during the regular season. So the big leaguers, who had already come through their longest season, were about to enter what was to be one of the longest World Series—a Series that produced brilliant pitching and frayed nerves that resulted from four postponements.

The quality of the pitching was reflected in the scores. The Yankees, who took their 20th World Series, 4 games to 3, scored a total of 20 runs in the seven games, and the Giants, 21 runs. The traditionally powerful Yankees had a team batting average of only .199, and the Giants batted .226. Ralph Houk's Yankees had little trouble wrapping up the first game, 6–2, clinching it with a homer by Cletis Boyer in the seventh. But Jack Sanford blanked the Yankees on three hits to win the second game, 2–0. The Bombers bounced back to take the third game, 3–2, with three runs in the seventh inning of a pitchers' duel between Billy Pierce of the Giants and Bill Stafford of the Yankees. Four of the runs in the fourth game, won by the Giants, 7–3, were produced by a seventh-inning home run by Chuck Hiller.

The fifth game was postponed one day because of rain in New York. Tom Tresh clinched it for the Yanks, 5–3, with a three-run homer in the eighth inning. Play was then stopped for three days by a storm in San Francisco. The sixth game was played on October 15, and this time it was Pierce's turn to beat the Yankees with a three-hit game, 5–2. But the Yankees had the final word as Ralph Terry shut out Al Dark's Giants, 1–0, with a four-hitter.

Maury Wills of the Dodgers won a major share of the glory during the National League season by stealing 104 bases in 165 games. The big-league record of 96 had been set by Ty Cobb in 1915 in a 154-game season (although Cobb actually played 156 games). Wills had 95 steals in 154 games, and 97 in 156 games. The Dodger star was named the most valuable player in the National League.

Whereas the 1961 season had been enlivened by a discussion of whether the home-run hitters were profiting from a lively ball, in 1962 the sluggers had difficulty meeting the ball. Four pitchers in the American League and one in the National succeeded in hurling no-hitters: Bo Belinsky of the Los Angeles Angels against the Baltimore Orioles, 2–0, May 5 (night game); Earl Wilson, Boston Red Sox, against the Angels, 2–0, June 26 (night game); Sandy Koufax, Dodgers, against the New York Mets, 5–0, June 30 (night game); Bill Monbouquette, Red Sox, against the Chicago White Sox, 1–0, August 1 (night game); and Jack Kralick, Minnesota Twins, against the Kansas City Athletics, 1–0, August 26 (day game).

New York, which had lost the Giants to San Francisco and the Brooklyn Dodgers to Los Angeles in 1958, again had an entry in the National League—the Mets, a collection of aging and immature ball players. The club set an undisclosed number of records for ineptness and futility, and finished in last place. The fans loved them, however, and 922,530 of them kept the turnstiles at the Polo Grounds spinning. This was 268,607 more than had seen the Giants in 1957.

PROFESSIONAL—MAJOR LEAGUES

American League (Final Standing, 1962)

Club	Won	Lost	Pct.
New York	96	66	.593
Minnesota	91	71	.562

World Series—Won by New York Yankees; attendance 7 games, 376,864; net receipts, $2,878,891.22; commissioner's share, $431,833.66; players' share (first 4 games only), $863,281.71, including full shares of $9,882 for each Yankee and $7,291 for each Giant; clubs' share, $791,887.90; leagues' share, $395,943.93.

Standings: New York (AL) won 4, lost 3, pct. .571; San Francisco (NL) won 3, lost 4, pct. .429

First Game (Candlestick Park, Oct. 4): New York 6, San Francisco 2; *Second Game* (Candlestick Park, Oct. 5): San Francisco 2, New York 0; *Third Game* (Yankee Stadium, Oct. 7): New York 3, San Francisco 2; *Fourth Game* (Yankee Stadium, Oct. 8): San Francisco 7, New York 3; *Fifth Game* (Yankee Stadium, Oct. 10): New York 5, San Francisco 3; *Sixth Game* (Candlestick Park, Oct. 15): San Francisco 5, New York 2; *Seventh Game* (Candlestick Park, Oct. 16): New York 1, San Francisco 0.

All-Star Games—*First Game* (Washington, July 10): National 3, American 1; *Second Game* (Chicago, July 30): American 9, National 4.

Most Valuable Players—*National:* Maury Wills, Los Angeles shortstop; *American:* Mickey Mantle, New York center fielder.

Cy Young Memorial Award (outstanding pitcher)—Don Drysdale, Los Angeles (25–9).

Rookies of the Year—*American:* Tom Tresh, New York shortstop and left fielder; *National:* Ken Hubbs, Chicago second baseman.

Leading Batters (Percentage)—*American:* Pete Runnels, Boston, .326; *National:* Tommy Davis, Los Angeles, .346; (Home Runs)—*American:* Harmon Killebrew, Minnesota, 48; *National:* Willie Mays, San Francisco, 49; (Runs Batted In)—*American:* Killebrew, 126; *National:* Davis, 153.

Leading Pitchers (Best Percentage, 10 or more victories)—*American:* Dave Wickersham, Kansas City (11–4), .733; *National:* Bob Purkey, Cincinnati (23–5), .821; (Most Victories)—*American:* Ralph Terry, New York, 23; *National:* Don Drysdale, Los Angeles, 25; (Earned-Run Average)—*American:* Hank Aguirre, Detroit, 2.21; *National:* Sandy Koufax, Los Angeles, 2.54.

Professional—Minor Leagues

(When two teams are named, the first won the regular-season championship and the second won the play-off; otherwise the team named won both. Letters in parentheses indicate league class.)

Alabama-Florida (D)—Pensacola; Selma
American Association (AAA)—Indianapolis; Louisville
Appalachian (D)—Bluefield
California—San Jose (first half and play-off); Reno (second half)
Carolina (B)—Durham; Kinston
Eastern (A)—Williamsport; Elmira
Florida State (D)—Sarasota (first half); Ft. Lauderdale (second half and play-off)
Georgia-Florida (D)—Thomasville (no play-off)
International (AAA)—Jacksonville; Atlanta
Mexican Center (C)—Fresnillo (no play-off)
Mexican (AA)—Monterrey (no play-off)
Midwest (D)—Dubuque Packers (first half and play-off); Waterloo (second half)
New York–Pennsylvania (D)—Jamestown; Auburn
Northern (C)—Grand Forks; Eau Claire
Northwest (B)—Wenatchee (first half and play-off); Kennewick (second half)
Pacific Coast (AAA)—San Diego
Pioneer (C)—Billings, Boise, and Great Falls (tied for first in first half); Billings (second half and play-off)
South Atlantic (A)—Savannah; Macon
Texas (AA)—El Paso; Tulsa
Western Carolina (D)—Statesville (no play-off)
Junior World Series—Atlanta (International League) defeated Louisville (American Association), 4 games to 3

Other Champions

Little League World Series—San Jose, Calif.
National Amateur Federation Junior Championship—Detroit
American Legion Junior—Anheuser-Busch Post, St. Louis
Babe Ruth League—Trenton, N.J.
Connie Mack League—Fort Worth, Texas
National Baseball Congress—Wichita (Kans.) Rapid Transit Dreamliners
American Amateur Baseball Congress—Portland, Oreg.

Intercollegiate and College Conference Champions—NCAA: Michigan; *NAIA:* Georgia Southern; *Eastern:* Navy; *Middle Atlantic:* University division—Gettysburg; college division, north—Moravian; college division, south—Ursinus; *Mason-Dixon:* Randolph-Macon; *Southern:* West Virginia; *Atlantic Coast:* Wake Forest; *Yankee:* Vermont; *Southeastern:* Florida; *Southwest:* Texas; *Midwest:* Ripon; *Mid-American:* Western Michigan; *Big Ten:* Illinois; *Big Eight:* Missouri; *National Junior College:* Phoenix, Ariz.

BASKETBALL

In college basketball, Cincinnati for the second year beat Ohio State (this time by 71–59) in the final of the NCAA tournament held in Louisville, Ky., on March 24, 1962. However, Ohio State was not to play second best in the news service polls. The team, led by All-American Jerry Lucas, again was rated first in the balloting by the coaches and sportswriters. Lucas was named the outstanding college basektball player in the nation for the second straight year by the National Association of Basketball Coaches and the Associated Press.

Billy McGill of Utah paced the collegiate scorers with 1,009 points for a 38.8 average. He led the finest array of scoring talent to play in any one college basketball season, as each of the top five scorers averaged more than 30 points per game. The other four were Jack Foley of Holy Cross (33.3), Nick Werkman of Seton Hall (33), Jerry Dischinger of Purdue (30.3), and Len Chappell of Wake Forest (30.1).

The National Invitation Tournament at Madison Square Garden was won by the Dayton Flyers, who beat St. John's of Brooklyn, 73–67, in the final. Bill Chmielewski paced the Flyers in his first varsity season.

The United States won the seven-nation Philippines Invitational International tournament in Manila by defeating the Philippine team, 94–58, for its sixth straight victory. Canada placed second in the competition, winning five of its six games.

In professional basketball, the division leaders, the Boston Celtics in the East and the Los Angeles Lakers in the West, went on to gain the final play-offs of the National Basketball Association, with the Celtics winning the series, 4 games to 3. This was the fourth league title in a row for Boston, which had won its division title for the sixth straight year. The Celtics' Bill Russell was named the league's most valuable player for the second successive year.

Wilt Chamberlain continued to amaze basketball fans. The Philadelphia Warriors' star became the first player to score 100 points in a single game (on 36 field goals and 28 foul shots), against the New York Knickerbockers on March 2. Despite Wilt's gate appeal, however, the Warriors felt an economic pinch in Philadelphia and after the season moved their franchise to San Francisco.

The Cleveland Pipers defeated the Kansas City Steers in the play-offs to win the first American Basketball League championship (1961–62). However, the new professional league went out of business on Dec. 31, 1962.

Amateur

Major Tournaments

NCAA—Cincinnati (defeated Ohio State in final, 71–59)
NCAA Small College—Mount St. Mary's of Emmitsburg, Md. (defeated Sacramento State in final, 58–57, in overtime)
National (New York) Invitation—Dayton (defeated St. John's of Brooklyn in final, 73–67)
National Intercollegiate (NAIA)—Prairie View A. & M. of Texas (defeated Westminster, Pa., 62–53)
Men's AAU—Phillips Oilers of Bartlesville, Okla. (defeated Denver Truckers in final, 70–59)
Women's AAU—Nashville Business College (defeated Wayland College in final, 63–38)
World—United States (defeated the Philippines in final, 94–58)

College Conference Champions

(Figures in parentheses represent wins and losses in conference games only.)

Ivy League—Yale (13–1)
Yankee—Massachusetts (8–2)
Tri-State—Fairfield (9–0)
Middle Atlantic—*University Division:* St. Joseph's (9–1); *Northern College Division:* Hofstra (10–2); *Southern College Division:* Penn Military (15–3)
Southern—*Regular season:* West Virginia (12–1); *Post-season conference tournament:* West Virginia
Atlantic Coast—*Regular season:* Wake Forest (12–2); *Post-season conference tournament:* Wake Forest
Southeastern—Mississippi State and Kentucky (tie, 13–1)
Southwest—Texas Tech and Southern Methodist (tie, 11–3)
Border—Arizona State (8–0)
Ohio Valley—Western Kentucky (11–1)
Missouri Valley—Cincinnati (11–2)
Midwestern—Grinnell (16–2)
Mid-American—Bowling Green (11–1)
Western (Big Ten)—Ohio State (13–1)
Big Eight—Colorado (13–1)
Skyline—Utah (13–1)
West Coast—Pepperdine (11–1)
Big Five—UCLA (10–2)

Professional

NATIONAL BASKETBALL ASSOCIATION (FINAL STANDINGS, 1962)

Eastern Division	Won	Lost	Pct.	Western Division	Won	Lost	Pct.
Boston	60	20	.750	Los Angeles	54	26	.675
Philadelphia	49	31	.612	Cincinnati	43	37	.537
Syracuse	41	39	.512	Detroit	37	43	.462
New York	29	51	.362	St. Louis	29	51	.362
				Chicago	18	62	.225

Eastern Division Play-offs—Boston defeated Philadelphia, 4 games to 3. *Western Division Play-offs*—Los Angeles defeated Detroit, 4 games to 2. *NBA Finals*—Boston defeated Los Angeles, 4 games to 3.

BILLIARDS

U.S. Amateur 3-Cushion—Eddie Lee, New York A.C.
National Intercollegiate—*3-Cushion:* Douglas Saunders, University of California; *men's pocket:* Bob Burke, Uni-

versity of Oregon; *women's pocket:* San Merrick, Bowling Green (Ohio) State
World Amateur 3-Cushion—Bob Marshall, Australia

BOBSLEDDING

World Championships (mile course, Garmisch-Partenkirchen, Germany, Jan. 20–30)—*2-man:* Rinaldo Ruatti (pilot) and Enrico DeLorenzo (brake), Italy (5:03.73 for 4 runs); *4-man:* Franz Schelle (pilot), Sepp Sterff, Ludwig Siebert, Otto Goebl (brake), Germany (2:33.66 for 2 runs; last 2 runs canceled)
AAU Championships (mile course, Lake Placid, N.Y., Feb. 10–11)—*2-man:* Larry McKillip (pilot) and James Lamy (brake), Saranac Lake, N.Y. (time, 4:50.86); *4-man:* Larry McKillip (pilot), Floyd Baumgartner, Neil Rogers, James Lamy (brake), Saranac Lake, N.Y. (4:41.46)

BOWLING

American Bowling Congress Tournament (Des Moines, Iowa, Feb. 17–April 26)—Regular Division: *Singles,* Andy Renaldy, Youngstown, Ohio; (720 pins); *doubles,* John Gribin and Gary Madison, Riverside, Calif. (1,376); *all-events,* Billy Young, Tulsa, Okla. (2,015); *team,* Strike 'n Spare, Chicago, Ill. (3,128). Classic Division: *singles,* Bob Poole, Pueblo, Colo. (759); *doubles,* Glenn Allison and Dick Hoover, St. Louis, Mo. (1,431); *all-events,* Jack Winters, Philadelphia, Pa. (2,147); *team,* Don Carter Gloves, St. Louis, Mo. (6,248). Booster Division: *team,* Carroll Lanes, Mount Carroll, Ill. (2,861)
Women's International Bowling Congress Tournament (Phoenix, Ariz.)—*Singles:* Martha Hoffman, Madison, Wis. (693); *doubles:* Sandy Hooper and Jean Cowger, Oklahoma City, Okla. (1,238); *all-events:* Flossie Argent, St. Louis, Mo. (1,808); *team, first division:* Linbrook Bowl, Los Angeles, Calif. (3,061)
Bowling Proprietors Association of America Champions—*Singles:* Dick Weber, St. Louis, Mo. (299.34 Petersen pts.); *women's singles:* Shirley Garms, Chicago, Ill. (138.44); *doubles:* Joe Joseph, Lansing, Mich., and Billy Golembiewski, Detroit, Mich.; *women's doubles:* Joy Abel and Betty Kuczynski, Chicago, Ill.
National Duck Pin Bowling Congress Tournament (Greensboro, N.C., March 17–May 6)—*Singles:* Frank Chiodi, Bridgeport, Conn. (450 pins); *doubles:* Raymond Rhue and Oneil Wynne, Norfolk, Va. (871); *all-events:* James Jenkins, Washington, D.C. (1,280); *team:* William Stalcup Furniture Co., Washington, D.C. (1,933); *women's singles:* Alva Brown, Baltimore, Md. (434); *women's doubles:* Frances Perkins and Beryl Moyer, Washington, D.C. (793); *women's all-events:* Cecelia Rohlfing, Baltimore, Md. (1,215); *women's team:* Guilford Lanes, Baltimore, Md. (1,826); *mixed doubles:* Gloria Darchik and Dan Riccio, Bridgeport, Conn. (824)
Professional Bowlers Association Champion of Champions Tournament (Indianapolis, Ind., May 19–20)—Joe Joseph
World Invitation Championship (Chicago, Ill., Nov. 25)—*Men:* Don Carter, St. Louis, Mo.; *women:* Marion Ladewig, Grand Rapids, Mich.

BOXING

Floyd Patterson, indifferent to the advice of his manager, Cus D'Amato, accepted the challenge of Charles (Sonny) Liston for a world heavyweight title fight in 1962. Patterson should have listened to D'Amato, for Liston knocked out the champion in 2 minutes 6 seconds of the first round. Fans at ringside in Chicago on September 25, who had paid up to $100 for their seats, were understandably disappointed, as were the hundreds of thousands who saw the flurry of action on closed-circuit television at 263 locations in the United States and Canada. This, the richest heavyweight fight in history, with total revenue reaching $5 million, also was one of the shortest.

Fans across the country were shocked on March 24 when Emile Griffith punched Benny (Kid) Paret into insensibility in their televised world welterweight title bout in Madison Square Garden. Paret, the defending champion, never regained consciousness and died 10 days later. In a defense of the title, Griffith outpointed Ralph Dupas at Las Vegas on July 13.

A jinx continued to pursue Griffith, however, for in his third title fight of the year, against Jorge Fernandez of Argentina, Griffith threw a punch that landed below his opponent's belt. A national television audience saw Fernandez crumple to the canvas and writhe in pain. Since Griffith was ahead on points at the time, he was declared the winner by a technical knockout. The bout, held in Las Vegas, Nev., on December 8, ended in the ninth round.

In a heavyweight fight of some interest, Cassius Clay, 20-year-old aspirant for Liston's crown, scored his 16th victory and 13th knockout by finishing Archie Moore in the fourth round at Los Angeles, on November 15. The bout may have ended the long career of Moore, who is close to 50 years of age.

Harold Johnson extended his light heavyweight championship to the whole world outside of California by beating Doug Jones at Philadelphia on May 12. Johnson outpointed Gustav Scholz in Berlin on June 23 in a defense of the title.

In a rough fight in San Francisco on October 23, Dick Tiger of Nigeria won the World Boxing Association middleweight crown from Gene Fullmer. In December, Tiger was named winner of the Edward J. Neil Memorial Trophy as "fighter of the year." Terry Downes, the champion in Massachusetts, New York, and Europe, had lost his share of the title to Paul Pender at Boston on April 7.

The world lightweight title also changed hands. Joe Brown surrendered his claim to the crown to Carlos Ortiz after their fight at Las Vegas on April 21. In his first defense, Ortiz stopped Teruo Kosaka of Japan in the fifth round in Tokyo on December 3.

Davey Moore had a cakewalk against Olli Maeki in defending the world featherweight crown in Helsinki on August 17. Moore stopped the Finn in the second round.

In the bantamweight class, Johnny Caldwell of Ireland was halted in the 10th round at São Paulo, Brazil, on January 18 by Eder Jofre of Brazil, who broadened his fractional title to cover the whole world.

A new champion emerged in the flyweight division when Masahika (Fighting) Harada of Japan outpointed Pone Kingpetch of Thailand in Tokyo on October 10. Kyo Noguchi of Japan had made an unsuccessful challenge against Kingpetch in Tokyo on May 30.

World Professional Champions
(December 31, 1962)

Heavyweight—Charles (Sonny) Liston, Philadelphia
Light Heavyweight—Harold Johnson, Philadelphia
Middleweight—Dick Tiger, Nigeria (recognized by WBA); Paul Pender, Brookline, Mass. (recognized by Mass. Athletic Commission)
Junior Middleweight—Denny Moyer, Portland, Oreg.
Welterweight—Emile Griffith, New York
Junior Welterweight—Eddie Perkins, Chicago
Lightweight—Carlos Ortiz, New York
Junior Lightweight—Gabriel (Flash) Elorde, Philippines
Featherweight—Davey Moore, Springfield, Ohio
Bantamweight—Eder Jofre, Brazil
Flyweight—Masahika Harada, Japan

National AAU Senior Championships
(Cincinnati, Ohio, March 29–31)

112 Pounds—George Colon, New York
119 Pounds—Victor Melendez, Puerto Rico
125 Pounds—Steve Freeman, Houston
132 Pounds—George Foster, Cincinnati
139 Pounds—Jackie Range, Elizabethton, Tenn.
147 Pounds—Wade Smith, Portland, Oreg.
156 Pounds—Roy McMillan, Toledo, Ohio
165 Pounds—Richard Gosha, Chicago
178 Pounds—William Joiner, Cincinnati
Heavyweight—Wyce Westbrook, Cincinnati
Team—Ohio

BRIDGE, CONTRACT

World Team Championship (New York, N.Y., Feb. 10–18)—Italy (Walter Alvarelli, Massimo D'Alelio, Giorgio Belladonna, Eugenio Chiaradia, Pietro Forquet, Benito Garozzo, Carl'Alberto Perroux, nonplaying captain) defeated North America, France, and Argentina

Spring Nationals
(Lexington, Ky., March 24–April 1)

Harold S. Vanderbilt Cup Team—Jerry Levitt, Mrs. Carolyn Levitt, Garrett Nash, George DeRuntz, and Larry Kolker, St. Louis
Men's Pairs—Philip Feldesman, New York, and Ivan Erdos, Los Angeles
Women's Pairs—Mrs. Sylvia Stein, Detroit, and Mrs. Carol Sanders, Nashville, Tenn.
Mixed Pairs—(tie) Mrs. Jessie Cook, Mt. Clemens, Mich., and Grant Marsee, Dearborn, Mich.; Mrs. Shirlee Harris, Houston, Texas, and Edward Rosen, Chicago
Men's Teams—Kelsey Petterson, Long Beach, Calif., Harold Guiver and Mike Shuman, Los Angeles, Alphonse Moyse, Jr., New York
Women's Teams—Mrs. Irving Bright, Mrs. Milton Livingstone, Mrs. George Crounse, and Mrs. Melvin Cornilland, Paducah, Ky., and Mrs. E. M. Novak, Salem, Ill.
Open Pairs—Arthur Robinson and Robert Jordan, Philadelphia
Open Individual—Mrs. Isabelle Alcone, New York

Summer Nationals
(Minneapolis, Minn., July 28–August 5)

Masters Knockout Teams—Edwin Kantar, Los Angeles; Marshall Miles, San Bernardino, Calif.; Leonard Harmon, New York; Ivar Stakgold, Chicago
Mixed Teams—Eric Murray, Toronto, Ont.; Mrs. Ralph Gordon, Buffalo, N.Y.; Mrs. Henry Portugal, Los Angeles; Charles Coon, New York
Masters Pairs—Philip Feldesman, New York, and Ira Rubin, Fair Lawn, N.J.
Men's Pairs—Philip Feldesman and Ira Rubin
Women's Pairs—Mrs. Clarice Holt, Ft. Worth, Texas, and Mrs. Greeley Warner, Pampa, Texas

Fall Nationals
(Phoenix, Ariz., November 24–December 2)

Men's Team—(tie) Sam Stayman, Victor Mitchell, and Philip Feldesman, New York; Eric Murray, Toronto,

Ont.; and Richard Freeman, Washington, D.C. Lew Mathe and Ed Taylor, Los Angeles; Harold Guiver, Long Beach, Calif.; Paul Allinger, Alameda, Calif.
Women's Team—Mrs. Edith Kemp, Miami Beach, Fla.; Mrs. Ann Burnstein, Las Vegas; Mrs. Stella Rebner and Mrs. Alicia Kempner, New Orleans; Mrs. Stephen Warner, Fair Lawn, N.J.
Mixed Pairs—Paul Levitt, Miami Beach, and Mrs. Clarice Holt, Ft. Worth, Texas
Women's Pairs—Mrs. Margaret Wager, Atlanta, and Mrs. Barbara Kachmar, Bronxville, N.Y.
Men's Pairs—Sam Fuoto and Victor Mitchell, New York
Open Teams—(tie) Edward Kantar and Don Krauss, Los Angeles; R. D. Hamman, Van Nuys, Calif.; and Marshall Miles, San Bernardino, Calif. Lew Mathe and Ed Taylor, Los Angeles; Harold Guiver, Long Beach, Calif.; Paul Allinger, Alameda, Calif.; Ron von der Porten, Berkeley, Calif.; and Erik Paulsen, Anaheim, Calif.
Open Pairs—Mrs. Dorothy Hayden, Hastings-on-Hudson, N.Y., and B. Jay Becker, New York

CANOEING

American Canoe Association Championships
(Washington, D.C., July 28–29)

Men, 1,000 Meters

Canoe Singles—Roger Van de Meulebroecke, Potomac Boat Club, Washington, D.C. (time, 5:04)
Kayak Singles—Charles Lundmark, Washington (D.C.) C.C. (4:32)
Canoe Tandem—Frank B. Havens and Charles Lundmark, Washington (D.C.) C.C. (5:00)
Kayak Tandem—William Kelly and Neil O'Keeffe, Inwood C.C., New York (4:00)
Canoe Fours—Frank B. Havens, Andy Weigand, Dennis Van Valkenburgh, and John Beerbower, Washington (D.C.) C.C. (4:47)
Kayak Fours—William Kelly, Neil O'Keeffe, Tom Healy, and Eric Feicht, Inwood C.C., New York

Women, 500 Meters

Kayak Singles—Francine Fox, Washington (D.C.) C.C. (2:25)
Kayak Tandem—Marcia Jones and Eileen Murphy, Niles (Mich.) C.C. (2:26)
Kayak Fours—Marcia Jones, Eileen Murphy, Diane Jerome, and Joan Jerome, Niles (Mich.) C.C. (2:25)

Team Champion

Washington (D.C.) C.C.

CHECKERS

World Champions—*Three-move:* Walter Hellman, Gary, Ind.; *two-move:* Samuel Cohen, London, England; *blindfold:* Newell W. Banks, Detroit, Mich.; *go-as-you-please:* Thomas Wiswell, Brooklyn, N.Y.
U.S. Champions—*North:* Paul Wexler, New York, N.Y.; *South:* Elbert Lowder, Albemarle, N.C.; *three-move:* Basil Case, Haleyville, Ala.; *team* (North American and U.S.): Checker Club of New York

CHESS

World Champions—*Men:* Mikhail Botvinnik, USSR; *women:* Nona Gaprindashvili, USSR
U.S. Champions—*Men:* Robert Fischer, New York; *women:* Mrs. Gisela K. Gresser, New York; *open:* Antonio Medina, Venezuela; *women's open:* Kathryn Slater, New York; *junior:* Larry Gilden; Takoma Park, Md.; *amateur:* Ben Greenwald, New York, and Max Cohen, Philadelphia, co-champions; *women's amateur:* Adele Goddard, Miami, Fla.

COURT TENNIS

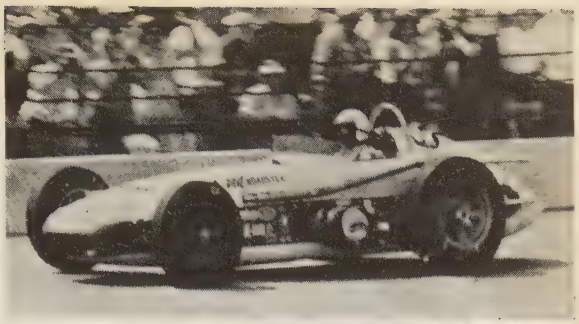
U.S. Open Championship—James Bostwick, Old Westbury, N.Y.
U.S. Amateur Championship—Northrup Knox, Buffalo, N.Y.
U.S. Amateur Doubles—Alastair B. Martin, Glen Head, N.Y., and William Vogt, Philadelphia

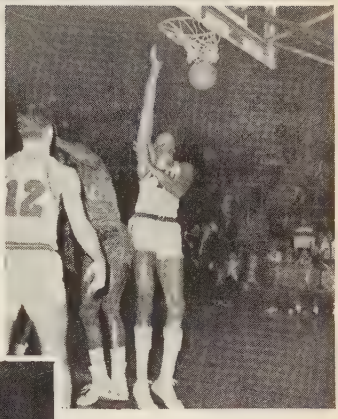
CROSS-COUNTRY

AAU (10,000 meters)—Peter McArdle, New York A.C. (29:53); *team:* Los Angeles Track Club (46 pts.)
NCAA (4 miles)—Tom O'Hara, Loyola (19:20.3); *team:* San Jose (58 pts.)
ICAAAA (5 miles)—Vic Zwolak, Villanova (24:47.3); *team:* Villanova (49 pts.)
Heptagonal (5 miles)—Edwin Hamlin, Harvard (26:02.0); *team:* Navy (79 pts.)

CURLING

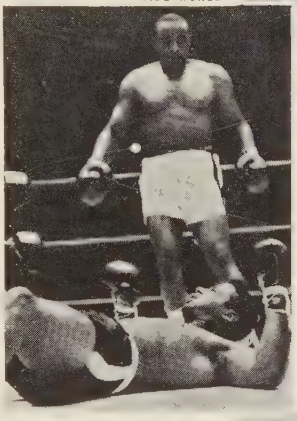
U.S. Men's Championship (Detroit, March 7–10)—Hibbing, Minn. (Fran Kleffman, skip)
U.S. Women's Championship (St. Paul, Minn., Feb. 1–4)—Wauwatosa, Wis. (Mrs. Steuart Tray, skip)
Scotch Cup (Falkirk and Edinburgh, Scotland, March 15–20)—1st, Canada; 2d, Hibbing, Minn.
Gordon International (Utica, N.Y., March 10)—U.S. 392, Canada 387
Gordon Medal (Schenectady, N.Y., March 4)—Ardsley (R. C. Wells, skip)
Mitchell Medal (Utica, N.Y., Jan. 21)—Avonlea (Brad Sumner, skip)





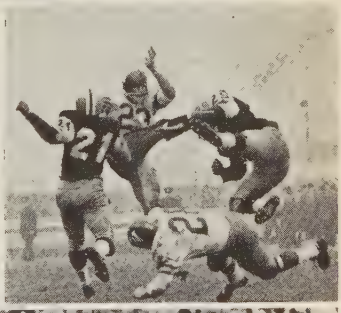
(*Above*) Rodger Ward flashes across the finish line to win 500-mile auto racing classic at Indianapolis, May 31. His average speed of 140.292 mph. set new record. (*Right*) Wilt Chamberlain of the Philadelphia (later San Francisco) Warriors continued his assault on the record books of the National Basketball Association. Here, against New York Knicks on March 2, he nets 100th point of game.

WIDE WORLD



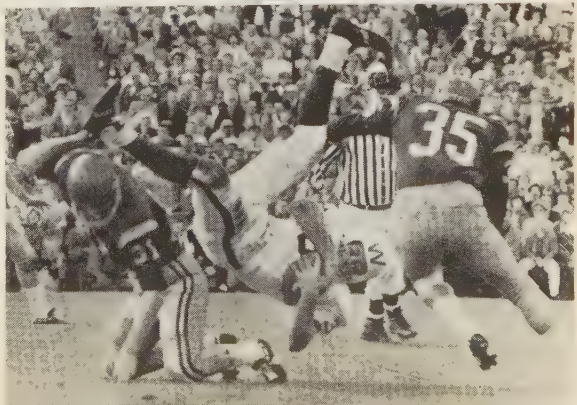
(*Left*) Charles (Sonny) Liston won heavyweight title in Chicago, September 25, by finishing off Floyd Patterson in 2:06 of opening round. (*Below*) Jack Delveau of Winnipeg gets off punt against Hamilton in Canada's Grey Cup game. Blue Bombers scored 28–27 upset in contest that required two days to complete when dense fog halted play December 1.

WIDE WORLD; UPI



(*Below*) In wildest game in Rose Bowl history, the nation's No. 1 college eleven, Southern California, edged second-ranked Wisconsin, 42–37, on Jan. 1, 1963. Here, Wisconsin's Ralph Kurek is upended after receiving pass from Ron VanderKelen, who made Rose Bowl history by completing 33 of 48 aerials for 401 yards.

UPI



Allen Medal (Utica, N.Y., Jan. 21)—New York Caledonian (Ernest Slaybaugh, skip)
Douglas Medal (Hastings-on-Hudson, N.Y., Jan. 14)—Potomac (William Onysko, skip)
Griffith Medal (Hastings-on-Hudson, N.Y., Jan. 14)—Winchester (Lawrence Burke, skip)

CYCLING

Tour de France—*Professional* (June 25–July 15; distance, 2,654 miles): Jacques Anquetil, France (141:31:54); *amateur* (July 2–15; 1,315.2 miles): Antonio Gomez Moral, Spain (54:47:53)
Giro d'Italia—*Professional* (May 18–June 9; 2,484 miles): Franco Balmamion, Italy (127:7:3)

World Championships

Professional

Cyclo-Cross (Esch-sur-Alzette, France, Feb. 18)—Renato Longo, Italy
Road (Salo, Italy, Sept. 2)—Jean Stablinski, France (184.9 miles; 7:43:11)
Track (Milan, Italy, Aug. 24–31)—*Sprint:* Antonio Maspes, Italy; *pursuit:* Henrik Nydam, Netherlands; *motor-paced:* Guillermo Timoner, Spain

Amateur

Road (Salo, Italy, Sept. 1)—Renato Bongioni, Italy (112 miles; 4:30:50); *team time trial*—Italy (69 miles; 2:28:48.5)
Track (Milan, Italy, Aug. 24–31)—*Sprint:* Sergio Bianchetto, Italy; *pursuit:* Kay Jensen, Denmark; *team pursuit:* Germany (4,000 meters; 4:26.6); *motor-paced:* Romain DeLoof, Belgium

Women

Road (Salo, Italy, Sept. 1)—Marie Rose Gaillard, Belgium (40 miles; 1:53:56)
Track (Milan, Italy, Aug. 24–31)—*Sprint:* Valentina Savina, USSR; *pursuit:* Beryl Burton, Great Britain

U.S. Amateur Championships
(St. Louis, Mo., September 25–26)

Senior Men—Jim Rossi, Chicago
Senior Women—Nancy Burghart, New York

DOG SHOWS

Westminster Kennel Club Show (New York, N.Y., Feb. 12–13)—*Best in show:* West Highland terrier, Ch. Elfinbrook Simon, owned by Florence and Barbara Worcester, Little Falls, N.J. (2,570 dogs shown)
International Kennel Club Show (Chicago, Ill., April 7–8)—*Best in show:* Norwegian elkhound, Ch. Gladjac Royal Oslo, owned by Mrs. Susan D. Phillips, South Royalton, Vt. (2,622 dogs shown)

FENCING

World Championships
(Buenos Aires, Argentina, July 16–28)

Individual—*Foil,* Gherman Sveshnikov, USSR; *épée:* Istvan Kausz, Hungary; *saber:* Zoltan Horvath, Hungary; *women's foil:* Olga Szabo, Rumania
Team—*Foil:* USSR; *épée:* France; *saber:* Poland; *women's foil:* Hungary; *overall:* Hungary

United States Championships
(New York, N.Y., June 30–July 7)

Individual—*Foil:* Edwin Richards, New York A.C.; *épée:* Gil Eisner, New York A.C.; *saber:* Michael Dasaro, U.S. Modern Pentathlon; *women's foil:* Yoshie Takeuchie
Team—*Foil:* Fencers Club of New York (Daniel Bukantz, Harold Goldsmith, Albert Axelrod, Aubrey Seeman); *épée:* New York A.C. (Ralph Spinella, James Powell, Paul Pesthy, Edwin Richards); *saber:* New York A.C. (Tibor Nyilas, Attila Keresztes, Tomas Orley, Laszlo Pongo); *women's foil:* Southern California Composite (Mrs. Janice-Lee Romary, Mrs. Maxine Mitchell, Mrs. Bonnie Linkmeyer); *3-weapon:* Fencers Club of New York (Albert Axelrod, James Adams, Harry Mayer)

National Collegiate (NCAA) Championships
(Columbus, Ohio, March 30–31)

Individual—*Foil:* Herbert Cohen, N.Y.U.; *épée:* Thane Hawkins, Navy; *saber:* Barton Nisonson, Columbia
Team (*3-weapon*)—Navy

FLY AND BAIT CASTING

National Association Championships
(Columbus, Ohio, August 14–19)

Men's Combined

(Distances given represent the total distance for the three longest of five casts made in each of two events, involving different baits or flies.)

All-Around—Jon Tarantino, San Francisco, and Terry Schneider, Jeffersonville, Ind. (tie)
All-Distance—Jon Tarantino (3,269 ft.)
All-Accuracy—Tom Sibila, Massillon, Ohio (393 pts.)
Distance (Baits)—Jon Tarantino (2,166 ft.)
Distance (Flies)—Jon Tarantino (1,103 ft.)
Accuracy (Baits)—Tom Sibila and Bill Gill, Sr., Chicago (tie; 196 pts.); accuracy (flies)—Don Bertelson, Louisville, Ky. (199 pts.)

Women's Combined

All-Accuracy—Mollie Schneider, Jeffersonville, Ind. (375 pts.)
Accuracy (Baits)—Dawn Holiday, Union, Ky. (190 pts.)
Accuracy (Flies)—Grace Perkins, Dayton, Ohio (193 pts.)

Skish

Men's Combined

All-Around—Jon Tarantino
All-Distance—Jon Tarantino (1,832 ft.)
All-Accuracy—Jon Tarantino (240 pts.)
Distance (Baits)—Ben Fontaine, New Orleans, La. (1,481 ft.)
Accuracy (Baits)—Don Bertelson (160 pts.)

Women's Combined

All-Accuracy—Mollie Schneider (157 pts.)
Accuracy (Baits)—Edna Mae Young, Columbus, Ohio (124 pts.)

FOOTBALL

In a season marked by upsets of form, 15 college football teams finished with unbeaten and untied records in 1962. Among these were Southern California, Mississippi, and Dartmouth. Southern California, playing in a rugged Big Six conference which showed clearly that west coast football was regaining its formidable stature, was not expected to finish in the first 10 teams nationally. As it turned out, the Trojans—victors over Duke, Southern Methodist, Iowa, California, Illinois, Washington, Stanford, Navy, UCLA, and Notre Dame—were named the top team in the year-end polls of both news services. In a sensational Rose Bowl game on Jan. 1, 1963, the Trojans outlasted second-ranked Wisconsin, 42–37.

Mississippi pulled out a 13–6 triumph over Mississippi State to complete its unblemished season and gain the Southern Conference championship. Ole Miss shut out Kentucky, Tulane, and Vanderbilt, and did not yield more than seven points to any one of its other six opponents. Dartmouth won the Ivy League title and, with a 9–0 overall record, completed its first perfect season since 1925.

The Army-Navy game, on December 1, produced another glorious triumph for the Middies and another crushing defeat for the Cadets. With the victory, Wayne Hardin became the first coach to lead Navy to four victories in a row over Army, as the heralded three platoons of Coach Paul Dietzel bowed to Navy, 34–14. The Middies were paced by a sophomore quarterback, Roger Staubach, who played a truly exceptional game, scoring two touchdowns and passing for two more.

Quarterback Terry Baker of Oregon State won the Heisman Trophy as the best college football player in the country.

The National Football League continued to be both a financial and an artistic success. For the second year the Green Bay Packers—who had dominated the regular season with a 13–1 record—captured the league championship. The New York Giants fell victim to Coach Vincent Lombardi's club again, this time by a score of 16–7.

Enjoying banner years in the NFL were Green Bay fullback Jim Taylor and New York quarterback Y. A. Tittle. Taylor scored 19 touchdowns during the regular season (a record) and led the league in rushing with 1,474 yards. Tittle led the Giants to a 12–2 campaign with his great passing, and in the final regular-season game tossed 6 touchdown passes to give him 33 for the year (a new record). Earlier, he had fired 7 touchdown passes in one game, tying a league mark.

In the American Football League championship game on December 23, fans were treated to a double-overtime thriller. The Dallas Texans of the Western Division defeated the Houston Oilers of the East, 20–17, when Tommy Brooker kicked a field goal at 2:54 of the second extra quarter. The Oilers had won the title in both of the league's first two seasons.

A sparkling Canadian Football League season wound up in a two-day fog. As the Winnipeg Blue Bombers sought to defend their championship against the favored Hamilton Tiger-Cats in Toronto on December 1 in the traditional Grey Cup game, mist drifted in over the field from Lake Ontario. By the start of the second period, the play on the field was obscured from most of the fans in the capacity crowd of 32,655. Later the fog obscured even the players from one another and also left the officials completely in the dark. Therefore, with 9 minutes 29 seconds left to play, the finish of the game was postponed until the next day, when Winnipeg won without further scoring by 28 to 27.

Major Bowl Games
(Games played Jan. 1, 1963, unless otherwise indicated)

Rose (Pasadena, Calif.)—USC 42, Wisconsin 37
Sugar (New Orleans)—Mississippi 17, Arkansas 13
Cotton (Dallas)—Louisiana State 13, Texas 0
Orange (Miami)—Alabama 17, Oklahoma 0
Gator (Jacksonville, Fla., Dec. 29, 1962)—Florida 17, Penn State 7
Liberty (Philadelphia, Dec. 15, 1962)—Oregon State 6, Villanova 0
Tangerine (Orlando, Fla., Dec. 22, 1962)—Houston 49, Miami (Ohio) 21

Bluebonnet (Houston, Dec. 22, 1962)—Missouri 14, Georgia Tech 10
Blue-Gray Game (Montgomery, Ala., Dec. 29, 1962)—Blue 10, Gray 6
Senior Bowl (Mobile, Ala., Jan. 5, 1963)—South 33, North 27
Shrine North-South Game (Miami, Dec. 22, 1962)—South 15, North 14
Shrine East-West Game (San Francisco, Dec. 29, 1962)—East 25, West 19
Gotham Bowl (New York, Dec. 15, 1962)—Nebraska 36, Miami 34
NFL Pro Bowl (Los Angeles, Jan. 13, 1963)—East 30, West 20
AFL All-Star Game (San Diego, Calif., Jan. 13, 1963)—West 21, East 14

NATIONAL FOOTBALL LEAGUE (FINAL STANDINGS, 1962)

Eastern Conference	W.	L.	T.	Pct.	Points for	Points against
New York[1]	12	2	0	.857	398	283
Pittsburgh[2]	9	5	0	.643	312	363

San Diego	4	10	0	.286	314	392
Oakland	1	13	0	.071	213	370

[1] Dallas won championship by defeating Houston, 20–17, in double-overtime game at Houston on December 23.

INTERCOLLEGIATE AND CONFERENCE CHAMPIONS
(Figures in parentheses represent wins, losses, and ties in conference games only)

National (AP and UPI Polls)—Southern California
Eastern (Lambert Trophy)—Penn State
Eastern Small College (Lambert Cup)—Delaware
Ivy League—Dartmouth (7–0)
Yankee—New Hampshire (4–0–1)
Middle Atlantic—*University Division:* Delaware (5–0); *Northern College Division:* Susquehanna (5–0); *Southern College Division:* Drexel and Western Maryland (tie, 5–1)
Atlantic Coast—Duke (6–0)
Southern—Virginia Military Institute (6–0)
Southeastern—Mississippi (6–0)
Mid-American—Bowling Green (5–0)
Missouri Valley—Tulsa (3–0)
Ohio Valley—East Tennessee, Eastern Kentucky, Middle Tennessee, Morehead State (4-way tie, 4–2)
Big Ten—Wisconsin (6–1)
Big Eight—Oklahoma (7–0)
Southwest—Texas (6–0)
Western Athletic—New Mexico (2–1)
Rocky Mountain—Adams State (4–0)
Big Six—Southern California (4–0)
Major Independents—Penn State (9–1)

GOLF

Jack Nicklaus, who won the United States Amateur golf championship in 1961, played his first year as a professional in 1962 and was a smashing success. His major 1962 tournament victory was the National Open, played at the tough Oakmont (Pa.) Country Club in June. The 22-year-old Nicklaus carded a 71 to Arnold Palmer's 74 to win a play-off after both had finished the regulation 72 holes with 283's.

Palmer himself had won a three-way play-off for the Masters title at Augusta, Ga., on April 9. After finishing in a tie with Gary Player and Dow Finsterwald at 280, Palmer carded a 68 to win by 3 strokes. Player was second and Finsterwald was third with a 77. This victory had opened Palmer's bid for the world's four major titles—the Masters, the British and United States Opens, and the Professional Golfers Association (PGA) championship. Palmer set a record in capturing the British Open at Troon, Scotland, with a 12-under-par 276.

After Nicklaus had stopped Palmer in the National Open, Player, of Johannesburg, South Africa, became the first nonresident of the United States to win the PGA championship, as Palmer slipped to a tie for 17th place.

For taking the four big titles, Palmer, Nicklaus, and Player qualified for a television tournament in September with a total prize of $75,000. The rookie Nicklaus won the "World Series of Golf" with a score of 135 and walked off the Akron, Ohio, course with the $50,000 first prize. Palmer and Player shared the remaining $25,000 for finishing in a tie at 139.

Palmer, who was voted "player of the year" by the PGA, bettered his own PGA money-winning record for the year with a total of $81,000, while Nicklaus collected $61,000 in PGA earnings alone.

Labron Harris, Jr., of Oklahoma State University beat Downing Gray, 1 up, in September to gain the United States Amateur championship. Harris also helped Deane Beman, Richard Sikes, and Billy Joe Patton to triumph in the world amateur golf tournament held in Japan. The squad won the Eisenhower Cup with a total of 854 strokes.

In women's golf, Mrs. Murle MacKenzie Lindstrom won her first major tournament in the United States Open, scoring with a 301 total. Judy Kimball took the PGA title and JoAnne Gunderson won the National Amateur championship. The American women's team defeated the British squad, 8 to 1, at the Broadmoor Golf Club, Colorado Springs, to retain the Curtis Cup.

MEN'S INDIVIDUAL CHAMPIONS

U.S. Open—Jack Nicklaus, Columbus, Ohio
U.S. Amateur—Labron Harris, Jr., Stillwater, Okla.
PGA—Gary Player, Johannesburg, South Africa
Masters—Arnold Palmer, Latrobe, Pa.
Tournament of Champions—Arnold Palmer
Thunderbird Classic—Gene Littler, San Diego, Calif.
U.S. Public Links—Dick Sikes, Springdale, Ark.
NCAA—Kermit Zarley, Yakima, Wash.
NAIA—Steve Spray, Eastern New Mexico University
Seattle World's Fair—Jack Nicklaus
North-South Amateur—Billy Joe Patton, Morganton, N.C.
American Classic—Arnold Palmer
Eastern Open—Doug Ford, Vernon Hill, N.Y.
Eastern Amateur—Charles Smith, Gastonia, N.C.
Southern Amateur—Bunky Henry, Valdosta, Ga.
Trans-Mississippi—Bob Ryan, Tulsa, Okla.
Western Open—Jacky Cupit, Longview, Texas
Western Amateur—Art Hudnutt, Elyria, Ohio
British Open—Arnold Palmer
British Amateur—Richard Davies, Pasadena, Calif.
English Amateur—Michael Bonallack, England
French Open—Alan Murray, Australia
French Amateur—Gaetan Morgue D'Algue, France
German Open—Bob Verwey, South Africa
Canadian Open—Ted Kroll, Fort Lauderdale, Fla.
Canadian Amateur—Reg Taylor, Johannesburg, South Africa
Canadian PGA—Alvie Thompson, Toronto
World Senior Professional—Paul Runyan, La Jolla, Calif.
World Senior—Howard Creel, Colorado Springs, Colo.
PGA Senior—Paul Runyan
U.S. Senior—George Dawson, Glen Ellyn, Ill.
USGA Senior—Merrill Carlsmith, Hilo, Hawaii
World Series—Jack Nicklaus

WOMEN'S INDIVIDUAL CHAMPIONS

U.S. Open—Mrs. Murle MacKenzie Lindstrom, St. Petersburg, Fla.
U.S. Amateur—JoAnne Gunderson, Kirkland, Wash.
PGA—Judy Kimball, Sioux City, Iowa
Titleholders'—Mickey Wright, Dallas
Eastern Amateur—Mrs. Charles Wilson, Philadelphia
Western Open—Mickey Wright
Western Amateur—Carol Sorenson, Janesville, Wis.
North-South Amateur—Clifford Ann Creed, Alexandria, La.
Trans-Mississippi—Jeannie Thompson, Tulsa, Okla.
Southern Amateur—Clifford Ann Creed
Canadian Open Amateur—Gayle Hitchins, Vancouver, B.C.
British Amateur—Mrs. A. D. Spearman, Sudbury, England
U.S. Junior—Mary Lou Daniel, Louisville, Ky.
U.S. Senior—Mrs. Harrison Flippin, Douglassville, Pa.
USGA Senior—Maureen Orcutt, Haworth, N.J.

TEAM CHAMPIONS

Canada Cup (professional)—U.S. (Arnold Palmer 278, Sam Snead 279; total 557)
Carling Cup (professional-amateur)—U.S. defeated Canada, 5½ to ½ (Bob Gardner and Dow Finsterwald defeated Al Balding and Phil Brownlee, 3–0, and Julius Boros and Chuck Kocsis defeated Gordie Brydson and Nick Weslock, 2½ to ½)
World—U.S., 854; *individual:* Gary Cowan, Canada, 280
Curtis Cup (women)—U.S. defeated Britain, 8 to 1
NCAA—Houston

GYMNASTICS

NATIONAL AAU CHAMPIONSHIPS
(Seattle, Wash., May 3–5)

All-Around—Donald Tonry, New York A.C. (113.550 pts.)
Floor Exercises—Donald Tonry (19.300)

Long Horse—Wilhelm Weiler, Alliston, Ont. (19.450)
Side Horse—William Buck, Chicago Turners (19.350)
Parallel Bars—Donald Tonry (19.550)
Horizontal Bar—Robert Lynn, Southern California (19.525)
Still Rings—Carl Wolf, Pasadena City College (19.325)
Flying Rings—Charles Denny, Washington (Seattle) A.C. (17.750)
Tumbling—Harold Holmes, Urbana, Ill. (19.250)
Rebound Tumbling—Frank Schmitz, Lafayette (La.) H.S. (18.550)
Rope Climb—Steve Leidner, Altadena, Calif. (time, 0:03.1)
Team—Los Angeles Turners (43 pts.)

Women

All-Around—Dale McClements, Seattle YMCA (75.7670)
Floor Exercises—Muriel Grossfeld, Champaign, Ill. (19.4830)
Side Horse—Dale McClements (19.5000)
Balance Beam—Muriel Grossfeld (19.2835)
Uneven Parallel Bars—Gail Sontgerath, West Palm Beach, Fla. (19.1000)
Tumbling—Barbara Galleher, Dallas A.C. (18.6000)
Rebound Tumbling—Beverly Avery, Austin (Texas) Crenshaw A.C. (187.5000)
Team—Austin (Texas) Crenshaw A.C. (13 pts.)

NATIONAL COLLEGIATE (NCAA) CHAMPIONSHIPS
(Albuquerque, N.Mex., March 30–31)

All-Around—Robert Lynn, Southern California (547.75)
Horizontal Bar—Robert Lynn (95.5)
Parallel Bars—Robert Lynn (97.0)
Side Horse—Mike Aufrecht, Illinois (95.0)
Still Rings—Dale Cooper, Michigan State (96.5)
Tumbling—Rusty Mitchell, Southern Illinois (94.5)
Rebound Tumbling—Steve Johnson, Michigan State (93.0)
Free Exercise—Robert Lynn (94.0)
Rope Climb—Paul Davis, California (time, 0:02.9)
Team—Southern California (95½)

HANDBALL

National AAU—*1-wall singles:* Carl Obert, New York A.C.; *1-wall doubles:* Ken Davidoff and Howie Eisenberg, Hebrew Educational Society, Brooklyn

National Combined AAU–YMCA—*4-wall singles:* Carl Obert; *4-wall doubles:* Oscar and Ruby Obert, New York A.C.; *masters doubles:* Jack Weitz and William Gluck, 92d Street YMHA, New York

U.S. Handball Association—*4-wall singles:* Oscar Obert; *4-wall doubles:* Jim Jacobs and Marty Decatur, New York; *masters doubles:* Frank Coyle, La Jolla, Calif., and Gus Lewis, Skokie, Ill.

HARNESS RACING

Su Mac Lad, an 8-year-old gelding, was the most consistent racer among the standardbreds during 1962 and was named "horse of the year" by the United States Trotting Association. Irving W. Berkemeyer's trotter won 7 of 13 starts and earned $112,350 to raise his career winnings to $560,349, an all-time high for a harness horse (exceeding Bye Bye Byrd's $554,257). The new champion also raced a 2-minute mile for the second time in the Trader Horn on September 28 at Roosevelt Raceway, Westbury, N.Y. This was only the third 2-minute mile by a trotter on a half-mile track in harness racing history.

There were many other fine racers during the year. Among them were Elaine Rodney, who won the $60,000 United Nations Trot at Yonkers on October 25, and Tie Silk of Canada, who won the $50,000 International Trot at Roosevelt Raceway on August 18. In each of these races, Su Mac Lad was the runner-up.

Four world records were set at the Westbury oval during the year. Duke Rodney lowered the mark for a mile and a sixteenth to 2:08⅘ when he won the $67,105 Realization Trot on May 4. Porterhouse scored in the American Trotting Championship on August 11 in 2:32⅗ for a mile and a quarter. Irvin Paul captured the $50,000 National Pacing Derby on September 1 in world record time for a mile and a quarter (2:29⅗). This was the first time a harness racer ever had raced five straight quarters under a 30-second average. Irvin Paul's time was four fifths of a second faster than the previous record of 2:30⅖ set by his full brother, Stephan Smith, on May 19. Thus, the mark was lowered twice in 1962 at Roosevelt Raceway.

A.C.'s Viking won the first two parts of the trotting triple crown—the Yonkers Futurity and the Hambletonian—but failed in his bid for the third portion. Safe Mission took the Kentucky Futurity in two straight heats.

The pacing triple crown was shared by Ranger Knight, who captured the Cane Pace; Thor Hanover, who scored in the Messenger; and Lehigh Hanover, victor in the Little Brown Jug. The Messenger was worth $169,430—a harness racing record.

For the second consecutive year, Robert G. Farrington of Richwood, Ohio, set a record for winning harness races. He drove 204 victors during 1962, 3 more than in 1961. He had 50 more winners than his nearest rival, Delmer M. Insko of South Beloit, Ill.

U.S. TROTTING ASSOCIATION CHAMPIONS

Horse of the Year—Su Mac Lad
Two-Year-Old Trotter—Speedy Scot
Two-Year-Old Pacer—Overtrick
Three-Year-Old Trotter—A.C.'s Viking
Three-Year-Old Pacer—Lehigh Hanover
Aged Trotter—Su Mac Lad
Aged Pacer—Henry T. Adios

MAJOR STAKES WINNERS

Messenger Stake—Thor Hanover
Cane Futurity—Ranger Knight
Hambletonian—A.C.'s Viking
Yonkers Futurity—A.C.'s Viking
Dexter Cup—Lord Gordon
Roosevelt Futurity—Steady Beau
Westbury Futurity—Speedy Scot
Little Brown Jug—Lehigh Hanover
National Pacing Championship—Irvin Paul
Realization Pace—Henry T. Adios
American National Pace—Henry T. Adios
Realization Trot—Duke Rodney
Good Time Pace—Stephan Smith
United Nations Trot—Elaine Rodney
Kentucky Futurity—Safe Mission
H.T.A. Finale (Pace)—Henry T. Adios
H.T.A. Finale (Trot)—Porterhouse
American Trotting Classic—Duke Rodney
American Trotting Championship—Porterhouse
Roosevelt International Trot—Tie Silk
Roosevelt Trot—Merrie Duke
American Pacing Classic—Irvin Paul
National Pacing Derby—Irvin Paul
International Pace—Royal Rick

HOCKEY

A season attendance record was set in the professional National Hockey League and world amateur hockey was marked by an international dispute during the 1961–62 season.

The NHL attracted 2,436,000 fans during the regular season to surpass the record of 2,397,000 set in 1946–47. The Toronto Maple Leafs won the Stanley Cup for the first time since 1951—defeating the Chicago Black Hawks, 4 games to 2—after the Montreal Canadiens had gained the regular-season title for the fifth time in a row. Bobby Hull of the Chicago Black Hawks and Andy Bathgate of the New York Rangers were tied with 84 points each at the end of the season, but Hull won the Ross Trophy as the leading scorer for having more goals. He scored 50 goals, equaling the record shared by Bernie (Boom Boom) Geoffrion and Maurice Richard, both of the Canadiens. Jacques Plante of Montreal won the Hart Trophy as the most valuable player in the league, and also took the Vezina Trophy as the top goalie. Doug Harvey, the No. 1 defenseman, resigned as player and coach of the New York Rangers following the season, but was persuaded to return, as a player only, for the 1962–63 campaign. Muzz Patrick, the general manager, took over as coach.

In amateur hockey, Sweden won the world title in Colorado in March, but five teams originally entered in the tournament did not compete. The Allied Travel Council in West Berlin, in reprisal against the Berlin wall, refused to let the East German team go to the United States. Four countries in the Communist camp—the Soviet Union, Czechoslovakia, Yugoslavia, and Rumania—withdrew from the tournament in protest. The Russians tried to have the championship status of the tournament nullified, but did not succeed. Canada finished second, followed by the United States, Finland, Norway, West Germany, Switzerland, and Great Britain.

NATIONAL HOCKEY LEAGUE
(Final Standings, March 25, 1962)

Team	Won	Lost	Tied	Points	Goals for	Goals against
Montreal	42	14	14	98	259	166
Toronto	37	22	11	85	232	180
Chicago	31	26	13	75	217	186
New York	26	32	12	64	195	207
Detroit	23	33	14	60	184	219
Boston	15	47	8	38	177	306

Stanley Cup Play-offs

Semifinals—Chicago defeated Montreal, 4 games to 2; Toronto defeated New York, 4 games to 2
Finals—Toronto defeated Chicago, 4 games to 2

Individual National Hockey League Awards

Hart Trophy (most valuable player)—Jacques Plante, Montreal
Ross Trophy (leading scorer)—Bobby Hull, Chicago (50 goals and 34 assists for 84 points)
Vezina Trophy (leading goal tender)—Jacques Plante
Norris Trophy (leading defenseman)—Doug Harvey, New York
Lady Byng Trophy (sportsmanship)—Dave Keon, Toronto
Calder Trophy (outstanding rookie)—Bobby Rousseau, Montreal

OTHER PROFESSIONAL CHAMPIONS

American Hockey League—*Eastern Division:* Springfield; *Western Division:* Cleveland; *Calder Cup Play-offs:* Springfield
Western Hockey League—*Southern Division:* Portland; *Northern Division:* Edmonton; *Play-offs:* Edmonton

Eastern Professional League—*Regular Season and Play-offs:* Hull-Ottawa

AMATEUR CHAMPIONS

World—Sweden
International League—*Regular season and play-off:* Muskegon (Mich.) Zephyrs
Eastern League—*Northern Division:* Clinton, N.Y.; *Southern Division:* Greensboro, N.C.; *play-off:* Johnstown, Pa.
Amateur Hockey Assn. of U.S.—*Intermediate open:* Syracuse (N.Y.) Stars; *Senior:* Estes of Rockland, Mass.; *intermediate:* Chicago (Ill.) Blades; *Junior:* Conley of West Roxbury, Mass.; *Juvenile:* Madison (Wis.) Hawks; *Midget:* Soo Iroquois, Sault Ste. Marie, Mich.; *Bantam:* Teamsters No. 247, Detroit, Mich.

Canadian

Allan Cup (senior)—Smoke Eaters, Trail, B.C.
Memorial Cup (junior)—Red Wings, Hamilton, Ont.

United States Intercollegiate

NCAA—Michigan Tech (defeated Clarkson Tech in final, 7–1)
ECAC—St. Lawrence (defeated Clarkson Tech in final, 5–2)
Western Association—Michigan Tech (defeated Michigan in final, 6–4)
Ivy League—Harvard (won 9, lost 1)

HORSE RACING

Showing little early foot in 1962, Mrs. Richard C. du Pont's Kelso nevertheless came on in the stretch to win "horse of the year" honors for the third time in a row, beating Carry Back in the balloting of the Thoroughbred Racing Associations. Kelso earned $254,585 during the year, winning five of his 11 races, and becoming the fifth horse in history to top the $1 million mark in career winnings. (His total was $1,011,940.) The handicap champion scored stakes victories in the Woodward, Jockey Club Gold Cup, and Stymie Handicaps. These consecutive triumphs came all in one month, from September 19 to October 20.

Carry Back had considerable backing in some quarters for his great heart. The little 4-year-old campaigner owned by Mrs. Katherine Price ran 18 times, winning 5 races, and placing second 5 times and third 3 times. Carry Back's stakes scores came in the Metropolitan, Monmouth, and Whitney over a period from May 30 to August 4. In their three meetings of the year, however, Kelso finished ahead of Carry Back, although Kelso did not win any of those races—the Suburban, Man o' War, and Washington (D.C.) International. Carry Back, winner of the Kentucky Derby in 1961, was retired to stud on December 1, having won a total of $1,170,825 in the 35 (out of 55) races in which he had finished in the money.

Beau Purple, who went to the post 19 times, won the Suburban and Man o' War. The Washington (D.C.) International was taken by Match II of France, with Kelso second and Carry Back third.

The Arlington-Washington Futurity, held on September 8, became the richest thoroughbred race in history by offering $357,250. The winner's share of this race for 2-year-olds—$142,250—went to Candy Spots. Manuel Ycaza, who was in riding trouble repeatedly during the year, finished second on Never Bend and was suspended for making a frivolous claim of foul.

Eddie Arcaro, the leading money winner among jockeys in the sport's history, announced his retirement on April 3. He had won $30,039,543 in purses over a 31-year career. Ron Ferraro, a 19-year-old rider from Cornwells Heights, Pa., earned more than $100,000 in gaining the national jockey championship with 350 winners.

A survey by United Press International of 24 states with legalized on-course betting showed that attendance had risen 1.28% during the year, from 33,453,617 in 1961 to 33,881,860, while betting was up 5.57%, from $2,538,107,934 (1961) to $2,679,461,505. By comparison, there had been a 5.41% increase in attendance and a 3.03% increase in betting from 1960 to 1961.

THOROUGHBRED RACING ASSOCIATIONS CHAMPIONS

American Champion—Kelso
Older Horse—Kelso

3,000 Meters—Inga Voronina, USSR (5:27.3)

North American Outdoor
(Petoskey, Mich., February 3–4)

Senior Men
Champion—Dick Hunt, Los Angeles (16 pts.)
220 Yards—Richard McDermott, Essexville, Mich. (0:19)
440 Yards—Richard McDermott (0:35.4)
880 Yards—Tom Augustitus, Detroit (1:41.2)
¾ Mile—Dick Hunt (2:17.6)
Mile—Tom Augustitus (3:35.8)
2 Miles—Dick Hunt (6:15.5)
5 Miles—Bob Fenn, Flushing, N.Y. (20:43.4)

Senior Women
Champion—Jeanne Omelenchuk, Detroit (20 pts.)
220 Yards—Beverly Gorton, St. Paul, Minn. (0:22.1)
440 Yards—Beverly Gorton (0:40.8)
880 Yards—Jeanne Omelenchuk (1:39)
¾ Mile—Jeanne Omelenchuk (2:14.4)
Mile—Jeanne Omelenchuk (3.56.5)

North American Indoor
(Lake Placid, N.Y., March 24–25)

Senior Men
Champion—Ken LeBel, Lake Placid, N.Y. (16 pts.)
440 Yards—Richard McDermott, Essexville, Mich. (0:42.7)
880 Yards—Bob Fenn, Flushing, N.Y. (1:27.0)
¾ Mile—Ken LeBel (2:15.7)
Mile—Keith Meyer, Glen Ellyn, Ill. (3:03.5)
2 Miles—Ken LeBel (6:23.6)

Senior Women
Champion—Karen Kaper, Northbrook, Ill. (20 pts.)
440 Yards—Karen Kaper (0:45.8)
880 Yards—Karen Kaper (1:32.9)
¾ Mile—Karen Kaper (2:30.0)
Mile—Karen Kaper (3:27.4)

United States Outdoor
(St. Paul, Minn., January 27–28)

Senior Men
Champion—Floyd Bedbury, St. Paul, Minn. (15 pts.)
220 Yards—Richard McDermott, Essexville, Mich. (0:18.5)
440 Yards—Ron Schwartzbauer, St. Paul, Minn. (0:36.2)
880 Yards—Tom Augustitus, Detroit (1:17.5)
¾ Mile—Floyd Bedbury, St. Paul, Minn. (2:09.3)
Mile—Tom Augustitus (2:54.8)
2 Miles—Dick Hunt, Pasadena, Calif. (6:17.7)
5 Miles—Dick Hunt (15:12.5)

Senior Women
Champion—Jeanne Omelenchuk, Detroit (18 pts.)
220 Yards—Beverly Gorton, St. Paul, Minn. (0:21.0)
440 Yards—Beverly Gorton (0:42.0)
880 Yards—Jeanne Omelenchuk (1:28.5)
¾ Mile—Jeanne Omelenchuk (2:22.2)
Mile—Jeanne Omelenchuk (3:04.4)

United States Indoor
(Champaign, Illinois, March 11–12)

Senior Men
Champion—Charles Aedo, Los Angeles (14 pts.)
440 Yards—George Wilson, Saranac Lake, N.Y. (0:39.7)
880 Yards—Bud Campbell, Paramount, Calif. (1:21.4)
¾ Mile—Bud Campbell (2:04.7)
Mile—Richard Wurster, Ballston Spa, N.Y. (2:55.1)
2 Miles—Charles Aedo (6:02.1)

Senior Women
Champion—Dianne White, St. Paul, Minn. (11 pts.)
440 Yards—Karen Kaper, Northbrook, Ill. (0:41.9)
880 Yards—Darlene Sechanic, Jersey City (1:28.1)
¾ Mile—Darlene Sechanic (2:30.3)
Mile—Lu Whitney, Minneapolis (3:16.9)

National Outdoor Champions

Men—Sgt./F.C. William B. Blankenship, Jr., U.S. Army (2,633–128)
Police—H. R. Mitchell, U.S. Border Patrol (2,591–96)
Women—1st Lt. Gail N. Liberty, U.S. Air Force (2,513–60)
Collegiate—Edward A. Schilke, Glen Ellyn, Ill. (2,553–68)
Trophy Matches—S/Sgt. James H. McNally, U.S. Army (293–9); *team:* U.S. Army Western (1,129–32)

National Indoor Champions

Men—S/Sgt. Edwin L. Teague, U.S. Air Force (882)
Collegiate—Jack D. Renfro, U.S. Naval Academy (288)
Team—U.S. Air Force Blue (1,180); *collegiate:* U.S. Military Academy (1,112)

Skeet

World Championships
(St. Janvier, Quebec, July 29–August 4)

All-Around—*Open:* S/Ldr. Barney C. Hartman, Ottawa, Ont. (546x550, 4-gun aggregate); *women:* Kathleen McGinn, Houston, Texas (535x550); *industry:* Fred Missildine, Sea Island, Ga. (545x550); *senior:* Larry H. Smith, Birmingham, Mich. (545x550); *subsenior:* Chesley J. Crites, Detroit, Mich. (538x550)
12-Gauge—*Open:* Kenneth D. Gilbert, Fort Benning, Ga. (250x250); *women:* Kathleen McGinn (249x250); *industry:* Fred Missildine (250x250); *senior:* Larry H. Smith (249x250); *subsenior:* Hugh S. Garland, Montreal, Que. (249x250)
20-Gauge—*Open:* William T. Sesnon, 3d, Los Angeles, Calif. (100x100); *women:* Kathleen McGinn (98x100) *industry:* Fred Missildine (99x100); *senior:* Larry H. Smith (99x100); *subsenior:* Chesley J. Crites (100x100)
28-Gauge—*Open:* Harold E. Myers, San Antonio, Texas (100x100); *women:* Kathleen McGinn (99x100); *industry:* David H. Yaeger, Anoka, Minn. (99x100);

senior: Henry Alcus, New Orleans, La. (100x100); *subsenior:* Mig P. Brown, San Antonio, Texas (99x100)
.410-Gauge—*Open:* Donald E. Jacobsen, Stockton, Calif. (99x100); *women:* Mrs. Marjorie C. Annan, Aspen, Colo. (94x100); *industry:* Fred Missildine (98x100); *senior:* Larry H. Smith (98x100); *subsenior:* Chesley J. Crites (97x100)

N.S.S.A. World Championships
(Montreal, July 31–August 4)

Men

All-Around—Barney C. Hartman, Ottawa, Ont. (546x550)
12-Gauge—Sgt. Kenneth D. Gilbert, Fort Benning, Ga. (250x250)
20-Gauge—William T. Sesnon, 3d, Los Angeles (100x100)
28-Gauge—Sgt. Harold E. Myers, San Antonio, Texas (100x100)
.410-Gauge—Donald E. Jacobsen, Stockton, Calif. (99x100)

Women

All-Around—Kathleen McGinn, Houston (535x550)
12-Gauge—Kathleen McGinn (249x250)
20-Gauge—Kathleen McGinn (98x100)
28-Gauge—Kathleen McGinn (99x100)
.410-Gauge—Marjorie C. Annan, Aspen, Colo. (94x100)

TRAP

Grand American Championships
(Vandalia, Ohio, August 17–25)

Grand American Handicap—Milt Youngs, Chicago (20 yds., 99x100)
Women's Grand American—Elizabeth Dickey, Anderson, Ind. (18 yds., 96x100)
Professional Grand American—Fred Missildine, Sea Island, Ga. (22 yds., 97x100)
Champion of Champions—Dan Orlich, Reno, Nev. (100x100)
Women's Champion of Champions—Frances King, Atlanta, Ga. (96x100)
North American Clay Target—Bernard Kalapach, Highland, Ind. (200x200)
Women's North American Clay Target—Rhoda Wolf, Philadelphia (196x200)
Professional North American Clay Target—Cliff Doughman, Alton, Ill. (200x200)
High Overall—Bernard Kalapach (968x1,000)
Women's High Overall—Punkin Flock, Miami, Fla. (938x1,000)
Professional Overall—Robert L. Andrews, Jr., Jackson, Miss. (956x1,000)
All-Around—John Sternberger, Trotwood, Ohio (388x400)
Women's All-Around—Shirley Couch, South Gate, Calif. (373x400)

SKIING

WORLD ALPINE CHAMPIONSHIPS
(Chamonix, France, February 11–18)

Men's Events

Giant Slalom—Egon Zimmerman, Austria (1:38.97)
Special Slalom—Charles Bozon, France (1st run, 1:09.1; 2d run, 1:12.57; total, 2:21.67)
Downhill—Karl Schranz, Austria (2:24.33)
Combined—Karl Schranz (11.04 pts)

Women's Events

Giant Slalom—Marianne Jahn, Austria (1:41.53)
Special Slalom—Marianne Jahn (1st run, 0:48.63; 2d run, 0:46.21; total, 1:34.84)
Downhill—Christine Haas, Austria (2:09.08)
Combined—Marielle Goitschell, France (41.13 pts.)

WORLD NORDIC CHAMPIONSHIPS
(Zakopane, Poland, February 18–25)

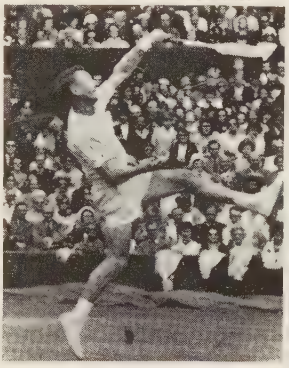
15-Kilometer Cross-Country—Asser Roennlund, Sweden (55:22.8)
30-Kilometer Cross-Country—Eero Mantyranta, Finland (1:52:39.4)
40-Kilometer Cross-Country Relay—Sweden (2:24:39.3)
50-Kilometer Cross-Country—Sixten Jernberg, Sweden (3:03:48.5)
Jumping (100-Meter Hill)—Helmut Recknagel, East Germany (97.5, 103, and 98.5-meter jumps; 241.4 pts.)
Combined (15-Kilometer Cross-Country and 70-Meter Hill Jump)—Arne Larsen, Norway (454.33)
Special Jumping (70-Meter Hill)—Toralf Engan, Norway (68, 67, and 70.5-meter jumps; 223.6 pts.)

UNITED STATES CHAMPIONSHIPS

Jumping (Fox River Grove, Ill., Jan. 21)—Ansten Samuelstuen, Steamboat Springs, Colo. (226.5 pts.)
Four-Event Meet (South Tahoe, Calif., Feb. 24)—*cross-country:* Jennings Cress, Western State, Gunnison, Colo. (37:49.6); *slalom:* Jim Gaddis, University of Utah (1:27.8); *downhill:* Jim Gaddis (288.28); *jumping:* Jennings Cress (204); *four-event combined:* Jim Bombard, Western State (98.04 FIS pts.)
Cross-Country—*15-Kilometer* (Crested Butte, Colo., Jan. 28): Mike Gallagher, Colorado University (0:53:55); *30-Kilometer* (Andover, Me., March 11): Raimo Ahti, Fitchburg, Mass. (2:00:07)
Alpine (Solitude, Utah, March 9)—Men: *giant slalom:* Jim Gaddis (1:32.0); *slalom:* Bill Barrier, University of Montana (1:53.4); *downhill:* Dave Gorsuch, Western

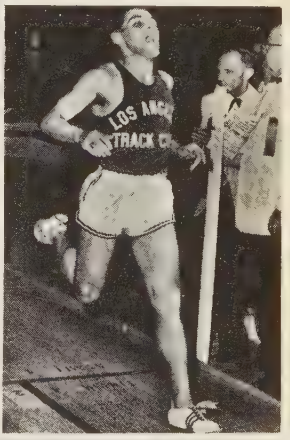
(*Above*) *Miss Century 21*, with Bill Muncey of Seattle at the wheel, swept all five major hydroplane racing events in 1962. Here the combination captures the President's Cup Regatta in Washington, D.C., September 16, with record speed of 109.157 mph. (*Right*) Murray Rose, Australian free-style specialist, registered two victories in the AAU outdoor championships in August.

WIDE WORLD



(*Left*) Rod Laver of Australia, shown returning ball at Wimbledon, achieved grand slam of tennis in 1962 by winning four titles.

WIDE WORLD



(*Right*) Jim Beatty hits the tape at Los Angeles, February 10, to set a new indoor mile record of 3:58.9. Beatty won the Sullivan Award as foremost amateur athlete of 1962. (*Below*) Action in second race of America's Cup competition, off Newport, R.I., in September. Australian challenger *Gretel* (left) won this race, but United States retained the prized trophy as *Weatherly* took the next three tests.

WIDE WORLD

State (1:51.6); *combined:* Dave Gorsuch (1.18 FIS pts.). Women: *giant slalom:* Tammy Dix, Solitude, Utah (1:29); *slalom:* Linda Myers, Mammoth Mt., Calif. (2:01.0); *downhill:* Sharon Pecjak, Aspen, Colo. (1:28.4); *combined:* Linda Myers (1.79 FIS pts.)

NATIONAL COLLEGIATE (NCAA) CHAMPIONSHIPS
(Squaw Valley, Calif., March 23–25)

Slalom—Jim Gaddis, University of Utah (1st run, 0:44; 2d run, 0:42.7; total time, 1:26.7); *team:* Denver (96.65 pts.)
Downhill—Mike Baar, Denver (1:44.8); *team:* Denver (98.04)
Jumping—Oyvind Floystad, Denver (201 and 217 feet; 223.6 pts.); *team:* Denver (99.28 pts.)
Cross-country—James Page, Dartmouth (0:59:03.7); *team:* Denver (96.18 pts.)
Alpine Combined—Jim Gaddis (209.7 pts.); *team:* Denver (194.60 pts.)
Nordic Combined—Tor Fageraas, Montana State (193.51 pts.)
Team—*Overall:* Denver (390.08 pts.)
Skimeister—James Page (361.67 pts.)

SOCCER

UNITED STATES CHAMPIONS

National Challenge Cup—New York Hungaria
National Amateur Cup—Carpathia Kickers, Detroit
National Junior Cup—Schumachers, St. Louis
American League—Philadelphia Ukrainians
German-American League—New York Hungaria
National League—Gjoa S.C., New York
National Collegiate—St. Louis University

BRITISH CHAMPIONS

Football Association Cup—Tottenham Hotspur
English Football League—Ipswich Town
Scottish Football Association Cup—Glasgow Rangers
Scottish League—*Cup:* Glasgow Rangers; *title:* Dundee

OTHER CHAMPIONS

World Soccer Cup—Brazil
European Soccer Cup—Portugal (Benfica of Lisbon)
Intercontinental Cup—Brazil
International League—*First Section:* America of Rio de Janeiro (Brazil); *Second Section:* Belenenses of (Lisbon) Portugal; *Play-off:* America of Rio de Janeiro; *American Challenge Cup:* Dukla of Prague (Czechoslovakia)

SOFTBALL

AMATEUR SOFTBALL ASSOCIATION CHAMPIONS

Men—Clearwater Bombers, Clearwater, Fla.
Women—Orange Lionettes, Orange, Calif.

SQUASH RACQUETS

U.S. Open—Azam Khan, Pakistan
U.S. Amateur—Sam Howe, Philadelphia, Pa.
Men's Doubles—G. Diehl Mateer, Jr., and John Hentz, Philadelphia, Pa.
Women's Singles—Margaret Varner, Wilmington, Del.
Women's Doubles—Mrs. Charles Classen, Bryn Mawr, Pa., and Mrs. Frances A. C. Vosters, Wilmington, Del.
Canadian Open—Roshan Khan, Pakistan

SWIMMING

Five world records were set by Americans in the Amateur Athletic Union's national outdoor championships in August 1962, but an Australian, Murray Rose, gained much of the glory at the meet. Making a comeback at 23 years of age, Rose captured two titles, although he had fared poorly in the indoor championships. Rose set an American record in the outdoor 400-meter freestyle with a clocking of 4 minutes 17.2 seconds, and won the 1,500-meter final with a time of 17:16.7 for another American mark.

The world records were set by Tom Stock of the Indianapolis A.C., Carl Robie of the Vesper Boat Club, Ted Stickles of the Indianapolis A.C., and a relay team from the Indianapolis A.C. Stock accounted for two of the records and shared in a third. He swam the 200-meter backstroke in 2:10.9 and the 100-meter in 1:00.9. Stock, teamed with Chet Jastremski, Fred Schmidt, and Pete Sintz, won the 400-meter medley relay in the world record time of 4:01.6. Robie, who captured the 200-meter butterfly final in 2:10.8, had lowered the mark to 2:12.4 in a heat. Stickles swam the 400-meter medley in 4.51.5. In addition, Don Schollander of the Santa Clara (Calif.) S.C. equaled the world record for the 200-meter freestyle (2:00.4).

Another "old-time" Australian, 25-year-old Dawn Fraser, turned in performances at least as impressive as Rose's. In the trials for the British Empire Games, Miss Fraser became the first woman to cover 100 meters in one minute. She went on in the same trials to lower the record to 59.9 seconds in the final. In the Empire Games, held in Perth, Australia, at the end of November, these two stars won four gold medals each.

A 16-year-old, Carolyn House of the Los Angeles A.C., set a world 1,500-meter freestyle record in the women's AAU outdoor championships in Chicago in August. Her time was 18:44. She also won the 400-meter and the 200-meter crowns.

MEN'S AAU OUTDOOR CHAMPIONSHIPS
(Cuyahoga Falls, Ohio, August 10–12)

100-Meter Freestyle—Steve Jackman, Gopher S.C., Minneapolis, Minn. (time, 0:54.6)
200-Meter Freestyle—Don Schollander, Santa Clara (Calif.) S.C. (2:00.4; equals existing world record)
400-Meter Freestyle—Murray Rose, Los Angeles A.C. (4:17.2)
1,500-Meter Freestyle—Murray Rose (17:16.7)
100-Meter Backstroke—Tom Stock, Indianapolis (Ind.) A.C. (1:00.9; world record)
200-Meter Backstroke—Tom Stock (2:10.9; world record)
100-Meter Breaststroke—Chet Jastremski, Indianapolis A.C. (1:08.2)
200-Meter Breaststroke—Chet Jastremski (2:30.0)
100-Meter Butterfly—Ed Spencer, North Carolina A.C. (0:58.9)
200-Meter Butterfly—Carl Robie, Vesper B.C., Philadelphia, Pa. (2:10.8; world record)
200-Meter Individual Medley—Ted Stickles, Indianapolis A.C. (2:16.2)
400-Meter Individual Medley—Ted Stickles (4:51.5; world record)
400-Meter Medley Relay—Indianapolis A.C. "B" Team (Tom Stock, Chet Jastremski, Fred Schmidt, Pete Sintz; 4:01.6; world record)
800-Meter Freestyle Relay—Santa Clara S.C. "A" Team (Mike Wall, Steve Clark, Ed Townsend, Don Schollander; 8:12.2)
3-Meter Springboard Diving—Lou Vitucci, Blue Hill (Mass.) C.C. (487.2 pts.)
Platform Diving—Bob Webster, Santa Ana, Calif. (472.7 pts.)
Team Champion—Indianapolis A.C. (124 pts.)
Long Distance—*Individual:* Ed Glick, Huntington (Ind.) YMCA (1:29:57.6); *team:* Rubber City S.C.

MEN'S AAU INDOOR CHAMPIONSHIPS
(Bartlesville, Okla., April 5–7)

100-Yard Freestyle—Steve Jackman, Minneapolis, Minn. (time, 0:48.3)
220-Yard Freestyle—Roy Saari, El Segundo, Calif. (1:58.6)
440-Yard Freestyle—Roy Saari (4:14.6)
1,500-Meter Freestyle—Roy Saari (16:54.1)
100-Yard Backstroke—Bob Bennett, Southern California Freshmen (0:54.1)
220-Yard Backstroke—Tom Stock, Bloomington, Ind. (2:08.0)
100-Yard Breaststroke—Chet Jastremski, Bloomington, Ind. (0:59.1)
220-Yard Breaststroke—Chet Jastremski (2:25.3)
100-Yard Butterfly—Larry Schullhof, Bloomington, Ind. (0:52.1)
220-Yard Butterfly—Larry Schullhof (2:10.7)
200-Yard Individual Medley—Chet Jastremski (1:59.4)
400-Yard Individual Medley—Ted Stickles, Bloomington, Ind. (4:18.1)
400-Yard Medley Relay—North Carolina A.C. (Thompson Mann, Peter Fogarasy, Ed Spencer, Bill McGinty; 3:37.9)
400-Yard Freestyle Relay—Santa Clara S.C. (Steve Clark, Ed Townsend, Nick Schoenman, Don Beukers; 3:17.4)
1-Meter Diving—Bob Webster, Sammy Lee Swim School, Santa Ana, Calif. (463.95 pts.)
3-Meter Diving—Rick Gilbert, Bloomington, Ind. (542.55 pts.)
Team—Southern California Freshmen and North Carolina A.C. (tie; 34 pts.)

WOMEN'S AAU OUTDOOR CHAMPIONSHIPS
(Chicago, Ill., August 16–19)

100-Meter Freestyle—Robyn Ann Johnson, North Virginia (Arlington) A.C. (time, 1:02.2)
200-Meter Freestyle—Carolyn House, Los Angeles A.C. (2:14.6)
400-Meter Freestyle—Carolyn House (4:45.3)
1,500-Meter Freestyle—Carolyn House (18:44.0; world record)
100-Meter Backstroke—Donna de Varona, Santa Clara (Calif.) S.C. (1:10.4)
200-Meter Backstroke—Ginnie Duenkel, Summit (N.J.) YWCA (2:32.1; world record)
100-Meter Breaststroke—Wiltrud Urselmann, West Germany (1:20.6)
200-Meter Breaststroke—Wiltrud Urselmann (2:53.3)
100-Meter Butterfly—Mary Stewart, Canadian Dolphin (Vancouver, B.C.) S.C. (1:07.6; world record)
200-Meter Butterfly—Sharon Finneran, Los Angeles A.C. (2:32.1; world record)
200-Meter Individual Medley—Donna de Varona (2:33.3)
400-Meter Individual Medley—Sharon Finneran (5:25.4; world record)
400-Meter Medley Relay—Vesper (Philadelphia, Pa.) B.C. "A" Team (Nina Harmer, Lynn Tally, Susan Doerr, Martha Randall; 4:47.5)
400-Meter Freestyle Relay—Vesper B.C. (Susan Doerr, Martha Randall, Mary Brundage, Elaine Johnson; 4:14.8)
3-Meter Springboard Diving—Barbara McAlister, Dick Smith S.G., Phoenix, Ariz. (416.45 pts.)
Platform Diving—Linda Cooper, Commerce (Calif.) S.C. (281 pts.)

Team—Los Angeles A.C. (80 points)
Long Distance—Kathy Baker, Dolphin S.C., Lakewood, Calif. (1:10.47)

Women's AAU Indoor Championships
(Sacramento, Calif., April 19–21)

100-Yard Freestyle—Robyn Ann Johnson, North Virginia (Arlington) A.C. (time, 0:55.5)
250-Yard Freestyle—Robyn Ann Johnson (2:34.6)
500-Yard Freestyle—Robyn Ann Johnson (5:27.2)
100-Yard Breaststroke—Ruby Whipple, Santa Clara (Calif.) S.C. (1:13.3)
250-Yard Breaststroke—Andrea Hopkins, Bethel Park, Pa. (3:15.2)
100-Yard Butterfly—Mary Stewart, Canadian Dolphin (Vancouver, B.C.) S.C. (0:59.2)
200-Yard Butterfly—Sharon Finneran, Los Angeles A.C. (2:16.8)
100-Yard Backstroke—Donna de Varona, Santa Clara S.C. (1:04.0)
200-Yard Backstroke—Donna de Varona (2:17.9)
200-Yard Individual Medley—Donna de Varona (2:18.9)
400-Yard Individual Medley—Sharon Finneran (4:52.9)
400-Yard Freestyle Relay—Cleveland S.C. "A" Team (Sue Tucek, Wilma Reimenschneider, Joan Lloyd, Judy Norton; 3:52.2)
400-Yard Medley Relay—Riviera S.C., Indianapolis (Sunny Gerdt, Ann Brown, Ann McIntyre, Sharon Marston; 4:17.9)
1-Meter Diving—Patsy Willard, Dick Smith S.C., Phoenix, Ariz.
3-Meter Diving—Mrs. Joel Lenzi O'Connell, Santa Clara S.C.
Team—Santa Clara S.C. (46 pts.)

National Collegiate (NCAA) Championships
(Columbus, Ohio, March 29–31)

50-Yard Freestyle—Steve Jackman, Minnesota (0:21.1)
100-Yard Freestyle—Steve Jackman (0:47.5)
220-Yard Freestyle—Jim Spreitzer, Illinois (2:00.9)
440-Yard Freestyle—Murray Rose, S. California (4:20.0)
1,500-Meter Freestyle—Murray Rose (17:26.7)
400-Yard Freestyle Relay—(tie) Michigan State (Jeff Mattson, Doug Rowe, Bill Wood, Mike Wood; 3:15.8) and Minnesota (John Bergman, Ralph Allen, Dan Crocker, Steve Jackman; 3:15.9)
100-Yard Backstroke—L. B. Schaefer, Ohio State (0:53.9)
200-Yard Backstroke—L. B. Schaefer (1:58.8)
100-Yard Butterfly—Ed Spencer, N. Carolina State (0:52.3)
200-Yard Butterfly—Artie Wolfe, Ohio State (1:58.0)
100-Yard Breaststroke—Dick Nelson, Michigan (1:01.7)
200-Yard Breaststroke—Virgil Luken, Minnesota (2:16.8)
200-Yard Individual Medley—Marty Mull, Ohio State (2:02.3)
400-Yard Medley Relay—Ohio State (L. B. Schaefer, Tom Kovacs, Artie Wolfe, John Plain; 3:37.6)
1-Meter Diving—Lou Vitucci, Ohio State (470.5 pts.)
3-Meter Diving—Lou Vitucci (506.45 pts.)
Team—Ohio State (92 pts.)

Intercollegiate Team Champions

NCAA—Ohio State
NAIA—North Central (Illinois)
College Conferences—*Eastern:* Harvard; *Middle Atlantic:* West Chester State; *Mason-Dixon:* Loyola; *Atlantic Coast:* Maryland; *Southeastern:* Florida; *Southwest:* Southern Methodist; *Mid-American:* Bowling Green; *Big Ten:* Indiana; *Big Eight:* Oklahoma; *Big Five:* Southern California

TABLE TENNIS

U.S. Table Tennis Association Championships (New York, N.Y., April 27–29)—*Singles:* Richard Miles, New York; *women's singles:* Mildred Shahian, Chicago; *doubles:* Richard Miles and Norbert van de Walle, Chicago; *women's doubles:* Valleri Smith, Los Angeles, and Barbara Chaimson, Washington, D.C.; *mixed doubles:* Bernard Bukiet, New York, and Barbara Chaimson

TENNIS

The Australians again dominated amateur tennis in 1962, with Rodney Laver becoming the second man in tennis history to win the world's four major titles in the same year. Laver beat fellow Australians in the finals of each of the top tournaments. He stopped Roy Emerson in the last round of the Australian and French championships, beat Marty Mulligan at Wimbledon, and completed the sweep by downing Emerson in the finals of the United States championships at Forest Hills, N.Y., on September 10. Donald Budge of the United States, who won the Big Four titles in 1938, was the only other man to gain the tennis grand slam.

Australia retained the Davis Cup for the fourth straight year with an easy, 5–0 victory over Mexico in the matches at Brisbane, December 26–28. Laver and Emerson won the doubles decisively, while the singles were won by Laver and Neale Fraser over the Mexican team of Rafael Osuna and Antonio Palafox. At the conclusion of the Cup competition, Laver turned professional.

The United States for the first time failed to advance to the finals of the American Zone eliminations in Davis Cup competition. The Mexicans ousted the United States by a score of 3–2 in the semifinals, which were held in the thin air and high altitude of Mexico City, August 4–6. Palafox gained a victory for Mexico by beating Jon Douglas, Santa Monica, Calif., who also lost to Osuna. Palafox and Osuna won the doubles by halting Chuck McKinley and Dennis Ralston. The American victories were scored by McKinley over Osuna and Mario Llamas.

Margaret Smith and Fred Stolle, both of Australia, dominated grass-court tennis in the United States. Miss Smith won the national singles tournament at Forest Hills, in addition to the Eastern and Pennsylvania championships. On the world tour she had won the French, Swiss, and Italian titles. Stolle shared the mixed doubles title with Miss Smith in the United States championship at Forest Hills and won the men's singles in the Eastern and Southampton events. Stolle also helped win the Wimbledon doubles crown for Australia, playing with Robert Hewitt. In the women's finals at Forest Hills, the 20-year-old Miss Smith halted the defending champion, Darlene Hard.

Major Amateur Tournaments

Davis Cup—Australia (defeated Mexico, 5–0, at Brisbane, Australia, Dec. 26–28)
Wightman Cup (Women)—United States (defeated Britain, 4–3, at Wimbledon, England, June 15–16)
U.S. Outdoor Doubles (Brookline, Mass.; finals Aug. 26)—Rafael Osuna and Antonio Palafox, Mexico; *women:* Darlene Hard, Long Beach, Calif., and Maria Bueno, Brazil
U.S. Outdoor Singles and Mixed Doubles (Forest Hills, N.Y.; finals Sept. 10)—Rod Laver, Australia; *women:* Margaret Smith, Australia; *mixed doubles:* Fred Stolle and Margaret Smith, Australia
U.S. Clay Court (River Forest, Ill.; finals July 22–23)—Chuck McKinley, St. Ann, Mo.; *men's doubles:* Ramsey Earnhart, Ventura, Calif., and Martin Riessen, Evanston, Ill.; *women's singles:* Donna Floyd, Arlington, Va.; *women's doubles:* Darlene Hard, Long Beach, Calif., and Sue Behlmar, Yonkers, N.Y.
U.S. Men's Indoor (New York, N.Y.; finals Feb. 11)—Chuck McKinley; *doubles:* Chuck McKinley and Rod Laver
U.S. Women's Indoor (Brookline, Mass.; finals March 2)—Carole Wright, Brooklyn, N.Y.; *women's doubles:* Belmar Gunderson, Indian Lake Estates, Fla., and Ruth Jeffery, Melrose, Mass.; *mixed doubles:* Chauncey Depew Steele, Cambridge, Mass., and Carole Wright
Australian National (Sydney; finals Jan. 14–15)—Rod Laver; *men's doubles:* Neale Fraser and Roy Emerson, Australia; *women's singles:* Margaret Smith; *women's doubles:* Margaret Smith and Robyn Ebbern, Australia; *mixed doubles:* Fred Stolle and Lesley Turner, Australia
Wimbledon (England; finals July 6–7)—Rod Laver; *men's doubles:* Fred Stolle and Bob Hewitt, Australia; *women's singles:* Karen Hantze Susman, Chula Vista, Calif.; *women's doubles:* Karen Hantze Susman and Billie Jean Moffitt, Long Beach, Calif.; *mixed doubles:* Neale Fraser and Margaret Osborne du Pont, Wilmington, Del.
French International (Paris; June 1–3)—Rod Laver; *men's doubles:* Neale Fraser and Roy Emerson; *women's singles:* Margaret Smith; *women's doubles:* Sandra Reynolds Price and Renee Schuurman, South Africa; *mixed doubles:* Bob Howe, Australia, and Renee Schuurman

Teams

NCAA—Southern California
NAIA—Pan American

TRACK AND FIELD

With few "barriers" left in the world of sports, the United States gained the distinction in 1962 of having the first pole vaulter to soar 16 feet. Lofted by the spring in the popular fiberglass pole, John Uelses scaled 16 feet ¼ inch in the Millrose Games at Madison Square Garden, New York, on February 2. The next night in Boston he cleared 16 feet ¾ inch. Marine Lt. Dave Tork, on April 28, raised the world outdoor record to 16 feet 2 inches, and a Finnish athlete, Pentti Nikula, lifted this to 16 feet 2½ inches on June 22. A new world indoor record (unofficial) was set by Don Meyers in Chicago, December 20, when he scaled 16 feet 1¼ inch.

There seemed to be more bounce in the boards, too, as Jim Beatty, running for the Los Angeles Track Club, became the first American to cover the mile indoors in less than 4 minutes. The 27-year-old graduate of the University of North Carolina turned in a time of 3 minutes 58.9 seconds in Los Angeles on February 10. Outdoors, Beatty also was a sensation. He became the first American in a generation to hold the world record for 2 miles when he ran that distance in 8:29.8 at Los Angeles on June 8. For his exploits, Beatty won the James E. Sullivan Memorial Trophy as the outstanding amateur athlete of 1962.

Peter Snell of New Zealand indicated what kind of year it was going to be when he lowered the world record for the mile to 3:54.4 on a grass track in Wanaganui on January 27. This bettered by a tenth of a second the mark set by Herb Elliott four years before. Snell also shattered the record for 880 yards with a 1:45.1 clocking a week after he had clipped the mile mark. The 880 record had been set by Tom Courtney (1:46.8) in 1957.

Al Oerter of the New York Athletic Club entered the circle of magic-mark surpassers when he threw the discus 200 feet 5½ inches in Los Angeles in May. The barrier was also topped by Vladimir Trusenev of Russia, when he made a mark of 202 feet 2¾ inches in Leningrad, but Oerter recaptured the title with a throw of 204 feet 10½ inches at Chicago on July 1.

The United States won its fourth victory in its fourth meeting with the Soviet Union, by a score of 128–107, at Palo Alto, Calif., on July 21–22. Also, as has become customary, the Russian women beat the American women, 66–41.

Valeri Brumel continued to catch the eyes of the track and field world with his prodigious leaps. The Russian holder of the world high jump record soared 7 feet 5 inches in the United States meet and later scaled 7 feet 5¼ inches in Moscow.

A dispute between the National Collegiate Athletic Association and the Amateur Athletic Union of the United States over control of American athletes in international meets was unsettled as the year drew to a close. Attorney General Robert F. Kennedy had arranged an uneasy truce and a tentative agreement on a coalition of the organizations, but fighting between the factions continued. However, on Jan. 19, 1963, Gen. Douglas MacArthur, who had been appointed by President Kennedy to arbitrate the dispute, reported that he had succeeded in formulating a compromise agreement.

Men's AAU Outdoor Championships
(Walnut, Calif., June 22–23)

100-Yards—Robert Hayes, Florida A.&M. (0:09.3)
220-Yards—Paul Drayton, Villanova (0:20.5; equals world record)
440-Yards—Ulis Williams, Southern California Striders (0:45.8)
880-Yards—Jerry Siebert, Santa Clara Youth Village (1:47.1)
Mile—Jim Beatty, Los Angeles Track Club (3:57.9)
3-Mile—Murray Halberg, New Zealand (13:30.6)
6-Mile—Bruce Kidd, East York Track Club, Toronto (28:23.1)
2-Mile Walk—Ron Zinn, U.S. Army (14:35.8)
120-Yard High Hurdles—Jerry Tarr, Emerald Empire A.C. (0:14.4)
220-Yard Low Hurdles—Jerry Tarr (0:22.6)
440-Yard Hurdles—Willie Atterberry, Los Angeles Track Club (0:50.5)
3,000-Meter Steeplechase—George Young, Las Cruces, New Mexico (8:48.2)
Javelin—Dan Studney, Santa Clara Youth Village (246 ft. 6 in.)
High Jump—John Thomas, Boston Univ. (6 ft. 10 in.)
Shot Put—Gary Gubner, Grand Street Boys Association, New York (63 ft. 6½ in.)
Broad Jump—Ralph Boston, Nashville, Tenn. (26 ft. 6 in.)
Discus—Al Oerter, New York A.C. (202 ft. 2 in.)
Hammer—Al Hall, New York A.C. (219 ft. 3 in.)
Pole Vault—Ron Morris, So. Calif. Striders (16 ft. ¼ in.)
Hop, Step, and Jump—Bill Sharpe, Philadelphia Pioneer Club (52 ft. 1¼ in.)
Team—Southern California Striders (53 pts.)

Long-Distance Events

Marathon (Yonkers, N.Y., May 13)—John J. Kelley, Boston A.A. (2:27:39.8)
3,000-Meter Team Race (Baltimore, Md., May 20)—Baltimore Olympic Club (Vinton, Pflaging, Berryhill)
One-Hour Run (San Diego, Calif., Sept. 8)—Peter McArdle, New York A.C. (11 mi. 1,236 yds. 34 in.)
15-Kilometer Run (Greenbelt, Md., Sept. 2)—Peter McArdle (42:04.8)
20-Kilometer Run (Needham, Mass., July 4)—Fred Norris (63:12.0)
30-Kilometer Run (New York, N.Y., March 11)—Peter McArdle (1:41:21.0)
10-Kilometer Walk (Chicago, Ill., May 26)—Ronald Zinn, Green and Gold A.C. (47:53.8)
15-Kilometer Walk (Detroit, Mich., Sept. 9)—John W. Allen, Buffalo, N.Y. (1:16:07.2)
20-Kilometer Walk (Chicago, Ill., July 8)—Ronald Zinn (1:43:59.0)
25-Kilometer Walk (Providence, R.I., Oct. 12)—Alex Oakley, Gladstone A.C. (2:03:14.0)
30-Kilometer Walk (Chicopee Falls, Mass., April 15)—Jack Mortland, Ohio T.C. (2:36:02.0)
35-Kilometer Walk (Seattle, Wash., July 21)—Ronald Laird, New York A.C. (3:20:21.0)
40-Kilometer Walk (Grand Island, N.Y., April 1)—John W. Allen, Garden Town A.C. (3:30:22.0)
50-Kilometer Walk (Long Island City, N.Y., May 20)—Ronald Laird (5:25:30.0)

Other Events

AAU Pentathlon (Boulder, Colo., July 7)—Paul Herman, Westmont College, Santa Barbara, Calif. (3,389 pts.)
AAU Decathlon (Tulare, Calif., June 29–30)—C. K. Yang, Taiwan (8,249 pts.)
AAU All-Around (Baltimore, Md., Aug. 5)—Tom Pagani, New York A.C. (8,265 pts.)
Boston Marathon (April 19)—Eino Oksanen, Finland (2:23:48)

Men's AAU Indoor Championships
(New York, N.Y., February 24)

60-Yards—Frank Budd, Villanova (0:06.2)
60-Yard High Hurdles—Hayes Jones, Craftsman A.C., Detroit (0:07.1)
600-Yards—Bill Crothers, East York Track Club, Toronto (1:10.8)
1,000-Yards—George Reilly, Georgetown (2:11.0)
Mile—Jim Beatty, Los Angeles Track Club (4:00.2)
3-Mile Run—Bruce Kidd, East York T.C. (13:48.8)
Mile Relay—Morgan State (John Bertha, Robert Bagley, Hubert Brown, Lawson Smart; 3:18.2)
2-Mile Relay—Fordham (Donald O'Conner, Tom Kenny, Doug Tynan, Frank Tomeo; 7:40.6)
Sprint Medley Relay—Villanova (Carl Wagner, Al Jackman, Frank Budd, Paul Drayton; 1:53.3)
Mile Walk—Ron Zinn, West Point (6:36.0)
High Jump—John Thomas, Boston Univ. (7 ft. 2 in.)
Pole Vault—Henry Wadsworth, U.S. Army (15 ft. 4 in.)
Broad Jump—Charles Mays, Maryland State (24 ft. 10¾ in.)
Shot Put—Gary Gubner, New York Univ. (62 ft. 10 in.)
35-Pound Weight Throw—Al Hall, New York A.C. (64 ft. 7¼ in.)
Team—Villanova (18 points)

Women's AAU Outdoor Championships
(Los Angeles, Calif., July 7–8)

100-Yards—Wilma Rudolph, Tennessee State (0:10.8)
220-Yards—Vivien Brown, Tenn. State (0:24.1)
440-Yards—Suzanne Knott, Columbus, Ohio (0:58.1)
880-Yards—Leah Bennett, Univ. of Hawaii (2:12.3)
80-Meter Hurdles—Cherie Parrish, San Francisco (0:11.3)
440-Yard Relay—Tennessee State (Wyomia Tyus, Wilma Rudolph, Edith McGuire, Vivien Brown; 0:46.0)
880-Yard Medley Relay—Chicago Mayor Daley Youth Foundation "A" Team (Harris, Rallings, White, Bush; 1:47.1)
High Jump—Kinuko Tsutsumi, Japan (5 ft. 3 in.)
Broad Jump—Willye White, Chicago Mayor Daley Y.F. (20 ft. 3 in.)
Shot Put—Earlene Brown, Los Angeles Spikers (48 ft. 10¾ in.)
Discus—Olga Connolly, Chicago (172 ft. 2 in.)
Javelin—Karen Mendyka, Hawaii (158 ft. 5 in.)
Team—Tennessee State (64 points)
Pentathlon—Pat Daniels, San Mateo G.A.A. (3,941 points)

Women's AAU Indoor Championships
(Louisville, Ky., February 17)

50-Yards—Willye White, Chicago Mayor Daley Youth Foundation (time, 0:05.9)
100-Yards—Willye White (0:11.2)
220-Yards—Vivien Brown, Tennessee State (0:25.5)
440-Yards—Suzanne Knott, Ohio Track Club (0:58.2)
880-Yards—Leah Bennett, Univ. of Hawaii (2:17.5)
70-Yard Hurdles—Joann Terry, Tennessee State (0:09.2)
440-Yard Relay—Tenn. State (Holmes, Dunn, McGuire, Brown; 0:48.6)
880-Yard Relay—Ohio T.C. "A" Team (Davis, Long, Fuller, Watkins; 1:53.8)
Shot Put—Sharon Sheppard, Cleveland Recreation Division (43 ft. 9 in.)
Running Broad Jump—Willye White (19 ft. 6½ in.)
High Jump—E. Baskerville, Ohio T.C. (5 ft. 2 in.)
Basketball Throw—Cynthia Wyatt, Univ. of Hawaii (105 ft. 7½ in.)
Team—Tennessee State (30 points)

National Collegiate (NCAA) Championships
(Eugene, Oreg., June 15–16)

100-Yards—Frank Budd, Villanova (0:09.4)
220-Yards—Harry Jerome, Oregon (0:20.8)
440-Yards—Hubert Brown, Morgan State (0:46.9)
880-Yards—James Dupree, So. Illinois (1:48.2)
Mile—Dyrol Burleson, Oregon (3:59.8)
3-Miles—Patrick Clohessy, Houston (13:51.6)
3,000-Meter Steeplechase—Patrick Traynor, Villanova (8:48.6)
120-Yard High Hurdles—Jerry Tarr, Oregon (0:13.5)
440-Yard Hurdles—Jerry Tarr (0:50.3)
High Jump—Roger Olsen, California (6 ft. 10 in.)
Broad Jump—Tony Watson, Oklahoma (26 ft. ½ in.)
Pole Vault—(tie) John Belitza, Maryland; Fred Hansen, Rice; Dexter Elkins, SMU; and Don Meyers, Colorado (15 ft. 3 in.)
Hop, Step, and Jump—Kermit Alexander, UCLA (50 ft. 11½ in.)
Shot Put—Dallas Long, Southern Calif. (64 ft. 7 in.)
Discus—David Weill, Stanford (188 ft. 1 in.)
Javelin—Jan Sikorsky, Southern Calif. (249 ft. 4 in.)
Hammer—Ted Bailey, Harvard (193 ft. 11 in.)
Team—Oregon (85 pts.)

U.S.–USSR Track Meet
(Palo Alto, Calif., July 21–22)

Team Scores—*Men:* U.S. 128, USSR 107; *Women:* USSR 66, U.S. 41

Intercollegiate Team Champions

NCAA—Oregon
ICAAAA—*Indoor and Outdoor:* Villanova
NAIA—Texas Southern
Heptagonal—*Indoor:* Harvard; *Outdoor:* Yale

College Conference Champions—*Yankee:* Maine; *Atlantic:* Maryland (indoor and outdoor); *Middle Atlantic* (University Division): St. Joseph's; (College Division): West Chester; *Mason-Dixon:* Roanoke; *Southern:* Furman (indoor and outdoor); *Southeastern:* Mississippi State; *Southwest:* Baylor; *Border:* Arizona State; *Midwest:* Grinnell (indoor and outdoor); *Mid-American:* Western Michigan; *Big Ten: Wisconsin* (indoor) and Michigan (outdoor); *Big Eight:* Kansas (indoor) and Oklahoma (outdoor); *Mountain:* Brigham Young; *Big Five:* Southern California; *New England:* (tie) Boston College and Boston University; *Atlantic:* Maryland; *Central:* Western Michigan (indoor and outdoor); *Missouri Valley:* Tulsa

VOLLEYBALL

U.S. Volleyball Association Championships (Philadelphia, Pa., May 9–12)—*Open:* Hollywood (Calif.) YMCA Stars; *masters:* Beverly Hills (Calif.) YMCA; *intercollegiate:* Santa Monica (Calif.) City College; *women:* Ahern Shamrock, Long Beach, Calif. *armed forces:* Alameda (Calif.) NAS.

WATER POLO

AAU Indoor—Illinois A.C.
AAU Outdoor—City of Commerce (Calif.) S.C.
AAU Women—Ann Arbor (Mich.) S.C.

WATER SKIING

American Water Ski Association

National Championships
(Pine Mountain, Ga., August 23–26)

Men—*Overall:* Chuck Stearns, Bellflower, Calif. (2,751 pts.); *slalom:* Chuck Stearns (23½ buoys); *tricks:* Al Tyll, Litchfield, Conn. (3,311 pts.); *jumping:* Larry Penacho, San Diego, Calif. (153 ft.)
Women—*Overall:* Jenny Hodges, Birmingham, Ala. (3,000 pts.); *slalom:* Jenny Hodges (35½ buoys); *tricks:* Jenny Hodges (2,069 pts.); *jumping* Cecele Campbell, San Francisco (77 ft.)

WEIGHTLIFTING

World Championships
(Budapest, Hungary, September 16–22)

Bantamweight—Yoshinobu Miyake, Japan (777 lbs.)
Featherweight—Yevgeni Minayev, USSR (799)
Lightweight—Vladimir Kaplunov, USSR (914¾)
Middleweight—Aleksandr Kurynov, USSR (931¼)
Light Heavyweight—Gyozo Veres, Hungary (1,014)
Middle Heavyweight—Louis Martin, England (1,058)
Heavyweight—Yuri Vlasov, USSR (1,190¼)
Team—USSR (39 pts.)

National AAU Championships
(Highland Park, Mich., June 2–3)

123-Pound Class—Dick Krell, Torio H. C., Toledo (670 lbs.)
132-Pound Class—Walter Imahara, U.S. Army (720)
148-Pound Class—Anthony Garcy, York (Pa.) Barbell Club (800)
165-Pound Class—Joseph Puleo, York B.C. (875)
181-Pound Class—Tommy Kono, Hawaii York A.C. (945)
198-Pound Class—Bill March, York B.C. (975)
Heavyweight Class—Norbert Schemansky, Detroit (1,140)
"Mr. America" Contest—Joe Abbenda, Long Island City, N.Y. (89 pts.)

WRESTLING

World Championships
(Toledo, Ohio, June 21–27)

Freestyle

114.5 Pounds—Ali Aliev, USSR
125.5 Pounds—Huseyin Akbas, Turkey
138.5 Pounds—Osamu Watanabe, Japan
154 Pounds—Enkou Valtchev, Bulgaria
171.5 Pounds—Imam Ali Habibi, Iran
191.5 Pounds—Mansour Mendizadeh, Iran
213.5 Pounds—Aleksandr Medved, USSR
Heavyweight—Aleksandr Ivanitski, USSR
Team—USSR (29 pts.)

Greco-Roman

114.5 Pounds—Sergei Rybalki, USSR
125.5 Pounds—Masamitsu Ichiguchi, Japan
138.5 Pounds—Imre Polyak, Hungary
154 Pounds—Kazim Ayvaz, Turkey
171.5 Pounds—Anatoli Kolesov, USSR
191.5 Pounds—Tevtik Kisd, Turkey
213.5 Pounds—Rostom Adachidze, USSR
Heavyweight—Istvan Kozma, Hungary
Team—USSR (40 pts.)

National AAU Senior Championships
(New York, N.Y., June 6–10)

Freestyle

114.5 Pounds—Horyuka Harada, Japan
125.5 Pounds—Dave Auble, New York A.C.
138.5 Pounds—Osamu Watanabe, Chuo University, Tokyo
154 Pounds—Kazuo Abe, Japan
171.5 Pounds—Jim Ferguson, Olympic Club of San Francisco
191.5 Pounds—Shunichi Kawano, Japan
213.5 Pounds—Dan Brand, Olympic Club of San Francisco
Heavyweight—Jiro Seki, Japan
Outstanding Wrestler—Osamu Watanabe, Chuo University (Tokyo)
Team—Olympic Club of San Francisco (40 pts.)

Greco-Roman

114.5 Pounds—Sakurama Koji, Tokyo Club
125.5 Pounds—Masamitsu Ichiguchi, Tokyo Club
138.5 Pounds—Nobuyuki Motokawa, Simi (Calif.) H.S.
154 Pounds—Toshiyoki Sawauchi, Tokyo Club
171.5 Pounds—Rudy Williams, Taha Grapplers (Detroit)
191.5 Pounds—Ron Lewis, U.S. Navy
213.5 Pounds—Dan Brand, Olympic Club of San Francisco
Heavyweight—Hallow Wilson, U.S. Navy
Outstanding Wrestler—Dan Brand, Olympic Club of San Francisco
Team—Olympic Club of San Francisco (49 pts.)

National Collegiate (NCAA) Championships
(Stillwater, Okla., March 22–24)

115 Pounds—Gray Simons, Lock Haven (Pa.) State
123 Pounds—Masaaki Hatta, Oklahoma State
130 Pounds—Mickey Martin, Oklahoma
137 Pounds—Bill Carter, Oklahoma
147 Pounds—Mike Natvig, Army
157 Pounds—Jack Flasche, Colorado College
167 Pounds—Ronnie Clinton, Oklahoma State
177 Pounds—Bob Johnson, Oklahoma State
191 Pounds—Wayne Baughman, Oklahoma
Heavyweight—Sherwyn Thorson, Iowa
Team—Oklahoma State (82 pts.)

YACHTING

Australia, the tennis leader of the world and a power in track and swimming, tried unsuccessfully in 1962 to win the America's Cup, the most important international yachting trophy. Its first 12-meter sloop, *Gretel,* was the first craft since 1934 to win a race against an American vessel. But *Weatherly,* the defender for the United States, won four of five races off Newport, R.I., beginning September 15, to keep the Cup in the United States. Under her skipper, Alexander (Jock) Sturrock, *Gretel* mounted a stalwart challenge, winning the second race. But the American skipper, Emil (Bus) Mosbacher, Jr., had learned all he needed to know about his craft in the first two races, and he won the next three in a row. The margin of victory in the fourth race, however, was only 26 seconds—the closest finish in the 111-year-old series. The series marked the 18th time that the United States had successfully defended the cup, which the sloop *America* first won in a race around the Isle of Wight in 1851.

America's Cup Summaries

First Race
September 15

	Elapsed time	Winning margin
Weatherly	3:13:57	3:46
Gretel	3:17:43	...

Course—Windward-leeward, twice around, 24 miles. Wind—10 to 18 knots, 275 degrees.

Second Race
September 18

Gretel	2:46:58	0:47
Weatherly	2:47:45	...

Course—Triangular, 24 miles. Wind—18 to 25 knots, 285 degrees.

Third Race
September 20

Weatherly	4:21:16	8:40
Gretel	4:29:56	...

Course—Windward-leeward, twice around, 24 miles. Wind—4 to 10 knots, 015 and 330 degrees.

Fourth Race
September 22

Weatherly	3:22:28	0:26
Gretel	3:22:54	...

Course—Triangular, 24 miles. Wind—6 to 15 knots, 165 to 180 degrees.

Fifth Race
September 25

Weatherly	3:16:17	3:40
Gretel	3:19:57	...

Course—Windward-leeward, twice around, 24 miles. Wind—10 to 15 knots, 245 to 225 degrees magnetic.

International Match Events

Seawanhaka Cup (5.5-Meter)—Carlo Masterson's *Pride,* U.S.
International Catamaran Challenge Trophy—Ian Norris's *Hellcat,* England

North American Y.R.U. Champions

Men's (Mallory Cup)—Jim Payton, Mendota Y.C., Madison, Wis.
Women's (Adams Cup)—Mrs. Sue Sinclair, Noroton (Conn.) Y.C.
Junior's (Sears Cup)—Henry Sprague, 3d, Newport Harbor, Calif.

Single-Handed (O'Day Trophy)—Peter Barrett, Madison, Wis.

One Design Classes

Star (World)—Richard L. Stearns, Wilmette, Ill.
Star (North American)—Bill Buchan, Seattle
Lightning (North American)—Tom Allen, Buffalo, N.Y.
Comet (International)—Norman Freeman, Ithaca, N.Y.
Luders 16 (International)—Charles Eschleman, New Orleans
Raven (National)—Carter Sales, Grosse Pointe, Mich.
Firefly (North American)—Steven Reid, Montreal
Jet 14—Doub Kenyon, Wales, Mass.
Atlantic—Webb Ray, Southport, Conn.
Flying Scot (National)—Gordon K. Douglass, Oakland, Md.
Thistle (National)—Peter Bordes, Milford, Conn.
210 (National)—Fred Pothier, Marblehead, Mass.
Blue Jay (National)—Steve Moore, Manhasset, N.Y.
Rhodes 18 (National)—Bob Curtis, Greenwich, Conn.
Celebrity—Joseph Corbi, Indian River, Del.
Day Sailer—James Connolly, Marblehead, Mass.
Tallstar—Tom Bigelow, Niantic, Conn.
Rebel—David Mahan, Oakland, Md.
5–0–5—Henry Schefter, Mamaroneck, N.Y.
Y-Flyer—Louis Stender, Charleston, S.C.
Jollyboat (North American)—Roger Saunders, Hollis, N.H.
Moth—Charles Dagit, Merion, Pa.
5.5-Meter (World)—Britton Chance, Philadelphia
Flying Dutchman (World)—Hans Fogh, Denmark
Finn (North American)—Fred Miller, Newport Beach, Calif.

Intercollegiate

Morss Trophy—U.S. Coast Guard Academy
Ivy League—Harvard

Distance Races

Newport-Bermuda (635 miles)—De Coursey Fales' schooner *Niña*, New York
Southern Ocean Racing Conference (6 races)—Jack Powell's yawl *Paper Tiger*, St. Petersburg, Fla.
Chicago–Mackinac Island (333 miles)—James Doane's cutter *Flame*, Chicago
Port Huron–Mackinac Island (235 miles)—Clare Jacobs' sloop *Falcon II*, Detroit
Storm Trysail Club Block Island (200 miles)—Dick Carter's sloop *Rabbit*, Marblehead, Mass.
Stamford Y.C. Vineyard Trophy (233 miles)—S. A. Long's yawl *Ondine*, Larchmont, N.Y.

STANDARDS OF LIVING

Industrial and agricultural production and consumption expanded at a slower pace in 1961 and early 1962 than in the immediately preceding years in most countries. Widespread bad weather in the crop year 1961–62, a slackening in expenditures on plant and equipment in both the developed and centrally planned economies, the declining importance of exports as a factor of growth, downward pressures on prices of primary commodities, and the exhausting of manpower and plant capacity in many European countries were the major influences, according to data assembled by various United Nations agencies.

United States.—Per capita purchasing power and real consumption both increased nearly 3% in 1962, after very small rises in the previous year. Consumer prices increased by about 1% and the population increased by nearly 3 million, or 1.6%, while incomes after taxes and consumption both increased by well over 5%.

Consumption.—While consumer preferences for various goods and services have been shifting, total real consumption has grown since 1947 at a rather steady rate of a little less than 3.5% per year, approximately twice the rate of population growth (1.8%). Food and clothing acquisitions have increased by about 2% a year. Service spending, in real terms, has grown more than 4% annually, which represents a faster rate than it was in the mid-1950's. This is reflected in increased outlays for medical care, personal business, and education. Public transportation outlays, on the other hand, have risen more slowly than any other service items. Durable goods takings grew abut 4% a year over the period, but recently have fallen below 3%. The purchase of autos and parts, which increased more than 8% a year during the early post-World War II period, has shown little real rise in recent years.

In 1962, per capita real outlays for services increased by about 3%—a slower pace than in the late 1950's—and those for nondurable goods also increased by about 2%.

Real per capita purchases of durable goods, on the other hand, increased by about 6%, after three years of little change or slight decline, reflecting a strong (although not buoyant) demand for furniture, household equipment, and radios and television sets, together with a very strong rise in purchases of new automobiles in the spring and again after the 1963 models were introduced. More than 7 million new passenger cars were sold in 1962, less than half a million below the previous high established in 1955. Private automobile registrations totaled 65.5 million at the end of 1962, a rise of 2.5 million over 1961.

In 1962, state and local government outlays, which are largely to provide education, highway, health and sanitation, and safety services for consumers, also increased about 3% per person after price adjustment.

Per capita outlays for health, both public and private, averaged $170 in the fiscal year 1962, as compared with $107 in 1955 and $81 in 1950. Similarly, outlays for social insurance and welfare averaged $209 per person in 1962, as against $112 in 1955 and $79 in 1950.

The American Family.—Income before taxes of families and unattached individuals averaged $7,020 in 1961, a gain in real terms of 1.3% over the year, compared with an annual average gain since 1947 of 1.8%. In 1961, 47% of all units had incomes before taxes of $6,000 or more; in dollars of the same purchasing power, the comparable ratios were 30% in 1947 and 15% in 1929.

Data for seven major cities surveyed by the Bureau of Labor Statistics as part of a two-year 66-area study, first available in late 1962, showed that families increased their real incomes in the decade of the 1950's by 15–20% in San Francisco, Chicago, New York City, Atlanta, and Washington, D.C.; 23% in Detroit; and more than 40% in Boston. Real expenditures for current living increased by smaller ratios, ranging from 9% to 23%, resulting in substantial increases in assets over liabilities. The average income after taxes in 1960 ranged from $5,412 in Atlanta to $6,869 in Boston, and the average family spent from 86% to 95% of its income for current expenses. In all cities, the long-term downtrend in the proportion spent for food and clothing continued, accompanied by increases in the shares for shelter, automobile purchase and operation, personal insurance, and gifts and contributions.

The birth rate continued to decline during 1961–62 from the postwar peaks of 1957, reaching the lowest levels since 1945. The death rate of infants under 1 year dropped to new lows in 1961 and 1962, approximately half the 1940 rate; and maternal deaths in 1961 averaged less than one tenth of the 1940 rate. Life expectancy at birth in 1960 was nearly 67 years for males and 73 years for females, an increase over the decade of more

than 1½ years for males and 2 years for females. (See also CENSUS DATA, U.S.; DEATH, CAUSES OF.)

The average person made 4.7 physician visits and 1.4 dental visits in the fiscal year 1959.

Income and Savings.—Personal income after taxes increased steadily throughout the year, and the year's average of more than $382 billion was 5.7% above the record set in 1961. About two thirds of the year's rise was in wages and salaries, with the sharpest increase in government and the service industries where employment gains have been largest. The rate of savings averaged 6.8%, about the same as in 1959 and 1961 but less than in most years of the 1950's. (See also INCOME; SAVINGS.)

Individuals' net equity in financial assets increased by $115 billion in 1961 to a year-end total of $890 billion; most of the gain reflected higher market values of stock issues. Debt increased by $15 billion during the year, primarily because of increased mortgages, while currency, deposits, and savings shares increased by nearly $20 billion. The number of persons owning shares in publicly held American corporations increased to 17 million in 1962, from 8.6 million in 1956; nearly 1 out of 6 adults was a shareowner in 1962, twice the ratio of 1956.

Canada.—Real personal consumption increased nearly 3% between 1960 and 1961, despite a rise of less than 2% in the gross national product. The year's increase was sharpest in durable goods outlays, but such services as shelter, medical care and household operation continued to take a growing share of the consumer's dollar.

Housing starts, which had fallen sharply in 1960, were stimulated during 1961 by government action to liberalize lending terms and by eased mortgage credit; by mid-1962 the annual rate was about 140,000 units, about equal to the peak reached in 1959.

The death rate reached a record low in 1961 of 7.7 per thousand population. The birth rate dropped for the fourth year, to 26.1; and the marriage rate also fell, to 7.0—the lowest since the mid-1930's.

Consumer prices rose less than 1% in 1961 and held practically steady in the first half of 1962. Hourly earnings of factory workers increased from $1.78 in 1960 to $1.83 in 1961 and $1.89 by mid-1962.

Latin America.—Living standards have improved at a more modest pace in Latin America in recent years than in the 1950's. Production increased about 4% in 1961—the same rate as in the three previous years—but since population growth was about 2.5%, per capita income increased about 1.6% instead of the 2.5% established as the minimum for the objectives of the Alliance for Progress. Between 1957 and 1961, total apparent consumption increased at an annual rate of about 4%, compared with approximately 5% between 1950 and 1957.

Real consumption per capita advanced strongly between 1960 and 1961 in Venezuela, Puerto Rico, Colombia, Chile, Argentina, and Brazil, and moderately in Guatemala, Peru, and Mexico. The cost of living continued to rise very sharply in Brazil and Argentina, in both 1961 and early 1962, and also increased significantly in Chile and Colombia.

Western Europe.—In most of the industrial countries, total private consumption increased in 1961 at annual rates of 5% to 7%—about the same as the previous year—reflecting rising disposable incomes. The rate of increase fell only in the United Kingdom, from 3.7% to 2%, as a result of restraints, higher indirect taxes, and tighter hire-purchase terms.

Retail sales of consumers durable goods (especially electrical appliances) generally increased more strongly than did textiles or total sales. However, a tendency for consumers to switch from durable goods to clothing, food, and services appeared in some of the wealthier countries. There were fewer refrigerators sold in West Germany in 1961 than in 1960, and the same number of television receiver licenses was issued in both years; similar developments appeared in Sweden and the United Kingdom.

Earlier, the share of consumer expenditures allocated to durables had risen sharply. In Austria, Denmark, Netherlands, Norway, Belgium, and Sweden, the ratio was 7.5–10% in 1950 and 9.5–16% in 1960. Ratios were lower, but rates of growth quite high, in France and the United Kingdom.

In France, at the beginning of 1962, 85% of all households had a radio, 23% had a television set, 35% a refrigerator, 30% a washing machine, and 34% a vacuum cleaner or electric floor waxer; 35% of single adult Frenchmen or families owned automobiles, up from 28% two years earlier.

New registrations of automobiles continued to increase rather rapidly in West Germany, Italy, and Switzerland, but in most other countries the rate of increase was slower than in preceding years. Ownership of autos was 111 per thousand inhabitants in France, 92 in the United Kingdom, and 70 in West Germany, compared with 335 in the United States.

Among the less industrialized countries, there were marked rises in 1961 in both supplies and real consumption in Spain, Greece, Portugal, and Ireland.

Construction of dwellings continued at a high level in 1961, but the rate of gain was slower than in earlier years in many countries because of the strains arising from three years of extremely high production.

Retail prices generally increased more in 1961 than in 1960; increases were especially notable in Austria, Denmark, Norway, and the United Kingdom. Food prices rose sharply in many countries, partly because of poor harvests, but also because of government measures—notably in France, West Germany, and the Scandinavian countries—to raise farm income.

Eastern Europe and USSR.—Increases in real incomes of wage and salary earners varied between 2% and 5% in 1961, as a rise in the output of consumers' manufactures and services more than offset a drop in farm output which occurred in all countries except Poland. Sales of textiles and clothing increased in most countries but, as in previous years, some specific items were scarce and others overabundant. Hungary introduced a consumers' credit scheme for a number of items, and credit facilities were further extended in the Soviet Union, but were curtailed in Czechoslovakia and East Germany.

Dwelling construction increased markedly in 1961 in Czechoslovakia, East Germany, Hungary, and Rumania, and moderately in Poland, but declined, in terms of living area, in the Soviet Union and especially in Bulgaria. Working hours were reduced in the Soviet Union and Czechoslovakia.

In the Soviet Union, the academic year 1961–62 was the first in which 8 years of education was compulsory; entitlement to free higher education also increased, and the number of university and technical students rose. In Rumania also, 8-year schooling is compulsory; and in Czechoslovakia, 9-year schooling was introduced in 1960.

Per capita income rose throughout the 1950's in all countries of the region. The annual rate of growth was between 5% and 6% in Hungary, Poland, and Yugoslavia, somewhat higher in Czechoslovakia, and about 9% in Rumania, Bulgaria, the Soviet Union, and East Germany. The rise reflected largely the shift from agriculture to industry and the increase in the amount of capital per worker.

Wage reform plans in the Soviet Union, intended to narrow income differentials, continued in 1961, with liberalization of income tax, an increase in social security benefits and state outlays for health and education, and an

increase in wages at the lower end of the scale, especially on state farms.

Africa.—Per capita real consumption increased markedly in 1961 in the Rhodesias, moderately in Ethiopia and Ghana, and was relatively steady in the Sudan and South Africa.

There were 5 million organized workers on the African continent in 1962, 2 million more than in 1958. Nearly 60% of the union membership was in the United Arab Republic (UAR), Morocco, Ghana, and South Africa.

Middle East.—Apparent per capita consumption—in terms of food, major textile items, and major consumer durables—increased in 1961 about 2–5% in Jordan, Iraq and Syria, and by more than 6% in Israel, but remained stationary in the UAR and Turkey. In the region as a whole, gross per capita real income increased from $183 in 1957 to $193 (at 1957 prices) in 1960; considerable declines in Cyprus and Syria and a minor decline in Jordan were offset by rises in Iran, Iraq, Israel, Lebanon, Turkey, and the UAR.

Far East.—A recent United Nations survey of economic growth showed that real per capita private consumption increased during the 1950's in all the private enterprise economies of the region except Pakistan. The annual growth rate averaged 7% in Japan, 5% in Taiwan, between 2% and 3% in the Philippines, Burma, Thailand, and South Korea, and 1.2% or less in Ceylon, India, and Indonesia. Housing standards apparently improved only slightly, if at all, during the decade, with the rate of new construction at the end of the period still below replacement and population growth needs; rates were high only in Ceylon, Japan, and Thailand. Per capita supplies of food and clothing also increased slowly or negligibly. Income levels, except in the Federation of Malaya, Japan, and the Philippines, continued to be among the lowest in the world.

Mortality rates have been lowered in all countries of the region, however, reflecting eradication of malaria, prevention of tuberculosis, and improved prenatal and maternity care.

Between 1960 and 1961, per capita real consumption increased 2–5% in most countries, with sharper rates of growth in India, Pakistan, and Taiwan, little change in Indonesia, and some decline in South Korea.

The percentage of school-age population enrolled in school (excluding mainland China, Nepal, and South Vietnam) increased from 9.2 in 1951 to 11.2 in 1958; in mainland China the reported ratios increased from 8.2 to 14.5.

Oceania.—Per capita supplies declined in Australia between 1960 and 1961, and consumption was unchanged, reflecting disinflationary measures introduced in late 1960 which depressed demand and increased unemployment. Policies were changed during 1961, so that the economy was again rising in 1962. Consumer prices increased about 2% in 1961 after a 4% rise the year earlier, and held steady during the first half of 1962. Factory wages have been rising somewhat more rapidly. In early 1962 it was announced that there would be no change in the federal basic wage in 1962, following an increase of U.S.$1.30 in July 1961.

In New Zealand, output and consumption both increased between 1% and 3% per capita in 1961, and unemployment fell to very low levels. Consumer prices increased about 1% in both 1960 and 1961, but advanced 4% between June 1961 and June 1962. Factory wages increased 7% in 1960 and 3% in 1961, but held virtually steady in early 1962.

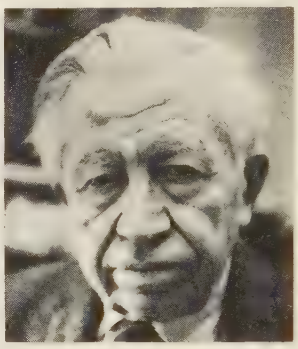
STEFANSSON, Vilhjalmur

U.S. Arctic explorer and writer: b. Arnes, Manitoba, Canada, Nov. 3, 1879; d. Hanover, N.H., Aug. 26, 1962.

Born to Icelandic immigrants who shortly moved to North Dakota, Stefansson was educated at the state universities of North Dakota and Iowa (A.B., 1903), then studied theology and anthropology at Harvard University, where he became an assistant instructor in anthropology. Trips to Iceland in 1904 and 1905 aroused a permanent interest in the Arctic, and over a period of 14 years he spent 10 winters and 13 summers in northern areas on a series of expeditions on which he explored much new territory, survived many dangers, and acquired a mass of information about Arctic regions and their peoples, though he never reached the North Pole.

During 1906 and 1907, Stefansson did ethnological work in the Mackenzie River delta and northern Alaska under a Harvard-Toronto University expedition. From 1908 to 1912 he surveyed the central Arctic coast for the American Museum of Natural History and the Geological Survey of Canada. Under the auspices of the Canadian government, he continued his explorations from 1913 to 1918 as commander of the Canadian Arctic Expedition. Using dog sleds after the ship *Karluk* was lost in 1914, he mapped large areas of the Arctic coast and Canadian Arctic Archipelago, studied the Eskimos, and demonstrated the feasibility of living off the country, even on ice floes, without outside supplies.

Stefansson became convinced that Arctic exploration could best be carried out by aircraft,



Vilhjalmur Stefansson (1879–1962)

WIDE WORLD

and made no long Arctic trips after his return in 1918. He wrote and lectured in support of Arctic economic development, contributing 24 authoritative books and at least 400 technical and popular articles covering many facets of northern regions, including anthropology, geography, geology, economics, linguistics, ethnology, and religion.

As early as 1922, Stefansson had predicted the regular use of polar routes for air travel between North America and Europe (initiated in 1952); and from 1932 to 1945 he was adviser on northern operations to Pan American World Airways. He also forecast travel under Arctic ice by submarines. His *Arctic Manual*, prepared for the U.S. Air Corps in 1935, proved valuable during World War II in teaching troops how to survive under Arctic conditions. In 1947 he became the Arctic consultant to the Northern Studies Program at Dartmouth College. He built up the Stefansson Collection of thousands of books and manuscripts on the Arctic, which was transferred to Dartmouth in 1951 and purchased by the college in 1953.

His writings include: *My Life With the Eskimo* (1913), *The Friendly Arctic* (1921), *The Northward Course of Empire* (1922), *Hunters of the Great North* (1922), *The Adventure of Wrangel Island* (1925), *Greenland* (1942), *The Arctic in Fact and Fable* (1945), *Not by Bread Alone* (1946), *Northwest to Fortune* (1958), and *Cancer: Disease of Civilization?* (1960).

STEVENSON, Adlai Ewing

U.S. ambassador to the United Nations: b. Los Angeles, Calif., Feb. 5, 1900.

An article in the Dec. 8, 1962, issue of *The Saturday Evening Post* raised a storm of contro-

versy about Adlai Stevenson that tended to overshadow his many accomplishments during the year.

Educated at Princeton University (B.A. 1922), Harvard Law School, and Northwestern University Law School (J.D., 1926), Stevenson was associated with several Chicago law firms in the practice of corporate law (1927–33, 1935–41, 1953–60). He served with the Agricultural Adjustment Administration (1933–34) and as special assistant to the secretary of the navy (1941–44). Named a special assistant to the secretary of state, he served as adviser to the U.S. delegation to the United Nations Conference on International Organization (San Francisco, 1945) and the Preparatory Commission of the United Nations (London, 1945). In 1946–47 he was senior adviser and later alternate delegate with the United States delegation to the UN General Assembly.

In his first candidacy for public office, he was elected Democratic governor of Illinois for the 1949–53 term. Drafted as the Democratic candidate in the 1952 presidential elections, he was decisively defeated by Dwight D. Eisenhower. In 1956 he sought and obtained the nomination but lost to Eisenhower again. An attempt to gain the nomination for him for the third time failed in 1960. He assumed his duties as ambassador to the United Nations on Jan. 23, 1961.

Distinguishing himself by the skillful conduct of his difficult role as head of the United States delegation to the United Nations, Adlai Stevenson remained throughout 1962 a consistent supporter of the United Nations and of settlement of international disputes through negotiation. Testifying on February 7 before the Senate Foreign Relations Committee in favor of United States purchases of United Nations bonds, he declared that the survival of the United Nations would be worth a gift, not simply a loan, of $100 million. In a speech at the dedication of the United Nations Pavilion at the Seattle World's Fair on June 19, he defended the equality of voting rights and representation in the United Nations against sharp criticism directed chiefly against the imbalance between voting strength in the United Nations and effective national power.

Stevenson's able handling of the Cuban issue before the United Nations on October 23 and the critical days that followed strengthened support for the United States position among other nations. Nevertheless, the Cuban issue was also responsible for the political storm in which he found himself as a result of the *Saturday Evening Post* article (written by two journalists close to the president), about which press reports began to appear on December 1.

The article, purporting to present the inside story of the secret National Security Council deliberations leading to the decision to impose a naval quarantine on Cuba, described Stevenson's position as "soft." One "nonadmiring official" was quoted as having declared later: "Adlai wanted a Munich. He wanted to trade the Turkish, Italian, and British missile bases for the Cuban bases." Stevenson flatly denied the charges, although he refused to divulge details of the secret proceedings. On December 4, in a "Dear Adlai" letter, President Kennedy expressed his continued confidence in the ambassador's work at the United Nations and appreciation for his role in the Cuban crisis. Nevertheless, rumors persisted that Kennedy was at least indirectly responsible for the access to reports of the secret proceedings given the authors of the article, and many observers voiced doubts as to Stevenson's future in the United Nations.

STIKKER, Dirk Uipko

Dutch diplomat and statesman: b. Winschoten, the Netherlands, Feb. 5, 1897.

A financial expert and former foreign minister of the Netherlands, Dirk U. Stikker succeeded Paul-Henri Spaak of Belgium as secretary general of the North Atlantic Treaty Organization on April 21, 1961. He has advocated an independent nuclear striking force for NATO. (See also North Atlantic Treaty Organization.)

After graduating from the University of Groningen (LL.D., 1922), Stikker entered banking and rapidly rose to the position of western area manager of the Twentsche Bank, one of the largest in the Netherlands. From 1935 to 1948 he directed the huge Heineken's Brewery interests in Holland and abroad. During World War II he helped to finance the Dutch resistance movement. President of an employers' association before the war, in 1945 he was instrumental in organizing cooperation between employers and trade unions in the Foundation of Labor, which speeded the Netherlands' postwar economic recovery.

Stikker entered politics in 1946 as leader of the Party of Freedom and a member of the upper chamber of the Dutch Parliament. When his party merged with other Liberal groups, he became president of the newly formed Party for Freedom and Democracy (1948).

While minister of foreign affairs (1948–52) in the coalition governments of Labor Party leader Willem Drees, Stikker guided his nation through the difficult period of negotiating Indonesian independence and the first steps toward western European unity. He was Council chairman (1950–52) of the Organization for European Economic Cooperation (OEEC), coordinating body for the distribution of Marshall Plan aid and forerunner of the Atlantic Community; he participated in the creation of the European Coal and Steel Community (1952), predecessor of the Common Market; and he signed the NATO Treaty (1949) for the Netherlands. From 1952 to 1958 he was ambassador to Great Britain, and from 1958 to 1961 was the permanent Dutch representative on the NATO Council and ambassador to the OEEC.

STOCKS AND BONDS

The sharpest decline in a quarter of a century reduced the net worth of common stockholders in the United States by an estimated $150 billion in 1962. From its historic top in December 1961 to its low in June 1962, the stock market lost almost 30%. At their bottom, average listed stock prices were back to mid-1956 levels. Over-the-counter stocks lost even more. Investment-grade issues were less heavily sold than the "growth" stocks that had been heavily traded in the closing stages of the preceding bull market, but no groups escaped the pressure of liquidation.

Several reasons have been advanced for the decline. The first is that stocks had reached levels that could be supported only by continuing and rapid expansion of earnings and dividends. At their peak late in 1961, industrial issues, as measured by the Standard & Poor's index, were selling at an average of almost 23 times earnings, to yield only about 2.7%.

Ticker tape and papers litter floor of the New York Stock Exchange on May 29 after hectic trading session halted the previous day's sharp drop in prices of stocks and bonds.

UPI

The second is that profits slid off slightly in the first quarter of 1962, and President Kennedy dramatized the end of the wage-price spiral when he forced the steel industry to cancel a price increase in April. Later forecasts that the rate of business expansion would slow down also contributed to speculative caution. Finally, the American bear market was partly in sympathy with a world movement; many foreign stock exchanges had been dropping long before the decline got under way in the United States.

After a technical recovery from the June 1962 lows, aided by a cut in margin requirements from 70% to 50% on July 10, stocks began drifting downward again in August, reaching an October selling climax at the time of the Cuban crisis. As shown in the following tabulation of important fluctuations by the Standard & Poor's stock price indexes (1941–43 = 10), October's lows almost duplicated the June bottoms, which were pierced by many individual stocks. A sharp recovery followed.

	Date[1]	Industrials	Rails	Utilities	500 Stocks
1961 low	Jan. 3	60.47	29.28	50.98	57.17
1961 high	Dec. 13	77.22	35.42	68.43	73.13
1961 close	Dec. 29	75.72	33.25	65.83	71.55
1962 high	Jan. 1	76.13	34.69	65.39	71.96
Declined to	June 25	53.77	26.41	48.39	51.35
Rose to	Aug. 23	63.28	28.74	58.16	60.33
Declined to	Oct. 24	54.79	26.70	52.22	52.55
1962 Close	Dec. 31	66.00	32.73	61.09	63.10

[1] Dates are for industrials. Rail and utility highs and lows in some instances occurred on other dates.

Although volume of trading was extremely heavy on panic days, reaching 14.8 million shares on "black Tuesday" (May 28, when prices dropped 6.5% in a single session), total turnover for the year dropped to 962 million shares from the near-record of 1,021 million reported in 1961.

A feature of the 1962 market was a wide increase in short selling. The short interest reached 6,080 million shares in mid-October, the greatest number since 1958. Another feature was a sharp drop in sale of shares by mutual funds, which reached $134 million in September 1962 (compared with $236 million in September 1961), the smallest total for any month since 1958. This decline reflected not only the general market atmosphere but also criticism of certain fund practices by the Wharton School of Economics report to the Securities and Exchange Commission. At no time, however, did sale of mutual fund shares to the public drop near the volume of redemptions by fund shareholders.

Volume of trading in bonds in 1962 was about the same as that of 1961. On the New York Stock Exchange alone, it amounted to $1,455 million, as compared with $1,636 million the year before, which was the largest since 1945.

Bond prices were generally firm as investors sought refuge from gyrations of the stock market. Conversely, yields declined. At the beginning of the year, AAA (highest grade) corporate issues yielded an average of 4.426%; at its close, that yield had dropped to 4.374%.

Money market factors were for the most part little changed during the year. Demand for bank credit rose only moderately. Both the discount rate and the prime New York commercial loan rate were unaltered at 3% and 4½%, respectively. Open market operations of the Federal Reserve Board resulted in only gradual contraction of free bank reserves, and the Federal Reserve Board ensured that banks had ample funds to meet heavy year-end credit needs by reducing reserve requirements against commercial bank time deposits from 5% to 4%.

New offerings of corporate bonds remained fairly heavy; in the first ten months of 1962 they totaled $7,332 million, against $7,779 million a year earlier. Common stock offerings, on the other hand, declined sharply. In the first ten months they amounted to only $1,222 million, as compared with $2,805 million in the corresponding 1961 period. State and municipal flotations reached a record volume of $7.4 billion in the first ten months, compared with $6.7 billion in the same period of 1961.

SUDAN

Formerly the Anglo-Egyptian Sudan, the Republic of the Sudan is strategically situated in northeast Africa, bordering on the Red Sea. It has an area of 967,000 square miles, and is the largest country in Africa. The Sudan's population (1961 est.) is 12,109,000, largely concentrated along the Blue Nile and White Nile. About two thirds of the population lives in the north and is largely Arab; the population in the south is mainly Negroid. Principal cities and populations (1961 est.) are: Khartoum, the capital (312,465, including the adjoining cities of Omdurman and Khartoum North); El Obeid, 56,970; Wad Madani, 53,677; Port Sudan, 47,561 (1956); Kassala, 44,182; and Atbara, 36,298 (1956). Arabic is the official language; many central African languages are spoken in the south.

Government.—From Jan. 1, 1956, when the country became independent, until November 1958, the Sudan was governed under a transitional constitution providing for a parliamentary system of government. A coalition Council of Ministers (cabinet), composed of members of the Umma Party and the People's Democratic Party, under Prime Minister Abdullah Khalil (Umma), took office following the elections early in 1958 and served until the seizure of power by the army on Nov. 17, 1958. The Sudan has since been governed by the Supreme Council of the Armed Forces and the Council of Ministers, both headed by Gen. Ibrahim Abboud. Parliament is suspended, and political parties are proscribed.

Religion and Education.—The people in the north are mainly Muslims, belonging to the unorthodox Ansari sect or the orthodox Khatmia sect. The people in the south are animists or Christians.

An estimated 6% of the people are literate; only 8% of the school-age population attends school. In 1960–61 there were 2,551 government schools (337,025 pupils); 74 other schools (43,399); 21 technical schools (3,122); 9 teacher-training schools (1,234); and the University of Khartoum, with over 1,200 students.

Finance.—Budget for the fiscal year ending July 1963: revenue, £Sd61.0 million; expenditure, £Sd52.1 million. (The Sudanese pound, £Sd, equals U.S.$2.872.) The 1961–62 fiscal year closed with a surplus of £Sd10.5 million, compared with a budgeted surplus of £Sd6.7 million. From July 1959 to July 1960 the foreign exchange reserves doubled from £Sd27.0 million to nearly £Sd55.0 million; by July 1961 the reserves increased to £Sd60.8 million, but decreased to £Sd54.0 million as of July 1, 1962.

Transportation and Communications.—Few if any countries of the world are more dependent on railways than the Sudan, which has few modern roads. A 2,800-mile railway network connects Wadi Halfa in the north with Atbara, Port Sudan, Khartoum, Kassala, and Sennar. From Sennar one line extends along the Blue Nile to Roseires near the Ethiopian border; a second line extends west to Kosti, El Obeid, and Nyala. Construction of a new 280-mile line south from Babanusa, in Kordofan Province, to Wau, in Bahr el Ghazel Province, was completed in March 1962.

Government-operated steamers ply the Nile from Juba in the south to Khartoum. The government-owned Sudan Airlines operates scheduled internal and foreign service, with 14 foreign airlines providing additional scheduled flights to the Sudan. In 1962, Sudan inaugurated its merchant fleet (see below *Events, 1962*).

As of Jan. 1, 1961, there were 12,716 passenger cars, 11,744 trucks, and 2,483 taxis. In 1960 there were 24,500 telephones; radios numbered about 10,000 in 1959.

Production.—About 90% of the population is engaged in agriculture or stock raising, which accounted in 1960–61 for 57% of the gross national product of £Sd357.2 million. Cotton, the most important crop, provides for about 50% of the total value of exports. The 1961–62 crop of 1,137,221 bales (1 bale equals 420 pounds) was the largest Sudanese cotton crop on record (616,502 bales in

1960–61). Gum arabic is the second most important export crop, and the Sudan provides 80 to 90% of the world's supply. Up to Aug. 23, 1962, 44,049 tons of gum arabic had been collected, compared with 44,623 tons for the same period in 1961. Other important crops include durra (or sorghum, the major subsistence crop), wheat, peanuts, corn, barley, beans, melons, dates, coffee, rice, and tobacco.

Foreign Trade.—In 1961 there was an unfavorable balance of trade of £Sd19.3 million, compared with a slight favorable balance of £Sd0.38 million in 1960. Exports in 1961 amounted to £Sd62.22 million (£Sd63.35 million in 1960); imports were £Sd81.52 million (£Sd62.97 million in 1960). Principal exports in 1961 (in million £Sd): cotton, 31.2 (33.15 in 1960); and gum arabic, 6.13 (6.97). Other important export crops included peanuts, sesame, durra, and livestock.

Events, 1962.—On January 28, Abdullah Khalil and Ismail al-Azhari, former prime ministers, and 10 other ministers were released from jail. They had been detained since July 1961 for having signed a telegram which criticized the government of President Abboud.

The visit on February 15–18 of Yugoslav President Tito helped to strengthen relations between Sudan and Yugoslavia. On February 20 a frontier demarcation agreement between the Sudan and Chad was concluded. President Abboud paid an official visit in April to West Germany, where he was said to have laid the ground for increased German economic aid to Sudan.

The new Industrial Bank of the Sudan began banking operations on August 15. The bank was created to assist and promote the establishment and expansion of privately owned and operated industrial enterprises. The bank's paid-up share of capital was equivalent to $1.4 million, and it also obtained a government loan for the same amount.

The 4,750-ton *Sennar*, first of two ships for Sudan's new merchant fleet, was delivered at Port Sudan in early spring. An additional four ships are to be chartered by the Sudan Maritime Lines, a joint Sudanese–Yugoslav enterprise.

On May 10 a sugar mill located at Guneid, 40 miles south of Khartoum, started production with an initial yearly capacity of 60,000 tons. The Sudanese American Textile Company began operations with an annual capacity of 15 to 20 million square yards; eventual output is scheduled to be increased to 80 million.

In September the government announced a new 10-year development plan (1962–71), which includes 260 projects and is estimated to cost £Sd512 million. Main projects are the Roseires Dam (£Sd35.7 million), Khasm el Gerba Dam (£Sd14.5 million), development of education facilities (£Sd34.2 million), completion of the Mangil Extension of the Gezira Scheme (£Sd14.5 million), railway extension (£Sd35.0 million), and the resettlement of the Wadi Halfa population (£Sd20.0 million), due to flooding caused by the construction of the Aswân High Dam in the United Arab Republic. The government estimates that as a result of these projects the gross national product will be increased by 63%, and per capita income by 23%.

The Mangil Extension, started in 1956 and completed in 1962, added 830,000 acres of new land to the 1 million already under irrigation in the Gezira area southeast of Khartoum on the Blue Nile. An additional 1 million acres will be irrigated by water from the Roseires Dam under construction.

The Merille tribesmen who have been raiding Ethiopia from Kenya also raided villages in the Sudan during the year. On September 1, 32 raiders were killed near the village of Kamathia.

Sudan broke its informal links with the sterling area on February 3 and declared itself "an independent monetary area." The first effect of the new monetary status was the announcement on February 7 that the Bank of Sudan will handle all foreign currency balances and foreign investments formerly handled by the Bank of England.

SUGAR

Production of sugar beets for sugar in the United States in 1962 was estimated in December at a record 18,169,000 tons by the Statistical Reporting Service of the U.S. Department of Agriculture. This compared favorably with an output in 1961 of 17,704,000 tons and the 10-year average of 13,613,000 tons. The 1962 yield per acre was estimated at 16.4 tons, the same as in 1961 and slightly lower than the 1951–60 average of 16.7 tons.

Production of sugarcane for sugar and seed (including that of Hawaii) was estimated at 21,462,000 tons, 7% above the 1961 output of 19,737,000 tons.

About 1,104,700 acres of sugar beets were harvested in 1962, compared with 1,077,000 acres in 1961 and the 1951–60 average of 813,000 acres. Acreage of sugarcane (including that of Hawaii) was 540,000 in 1962, as against 474,800 the year before.

U.S. PRODUCTION OF SUGAR BEETS AND SUGARCANE
(In thousand short tons)

State	Average 1951–60	1961	Est. 1962
Sugar beets:			
Ohio	244	307	415
Michigan	832	1,178	1,077
Wisconsin	81	65	...
Minnesota	779	1,258	1,038
North Dakota	404	592	565
South Dakota	62	94	120
Nebraska	880	1,155	945
Kansas	94	162	248
Montana	720	893	843
Idaho	1,559	2,272	2,453
Wyoming	518	706	614
Colorado	2,094	2,449	2,739
Utah	454	323	412
Washington	685	1,290	1,330
Oregon	417	478	501
California	3,710	4,388	4,766
Other states	78	94	103
United States	13,613	17,664	18,169
Sugarcane:			
Louisiana	5,671	7,683	5,944
Florida	1,417	2,308	5,244
Hawaii	9,142[1]	9,746	10,274
United States	...	19,737	21,462

[1] 1959–60 average.

United States sugar requirements for the calendar year 1962 were first set at 9,500,000 tons. This was 200,000 tons below anticipated sugar needs. The action was designed to achieve prices which would fairly and equitably maintain and protect the welfare of the domestic sugar industry. Requirements were later raised to 10,000,000 tons.

Despite a decline in Cuban output of 800,000 tons, world production of centrifugal sugar in the May 1962–April 1963 season was expected to be approximately 56,220,000 short tons, raw value, compared with 56,020,000 in the previous year and the record of 60,077,000 tons in 1960–61.

Production from sugarcane—at about 32.8 million tons—was expected to be about 835,000 tons higher than in 1961–62. Production of sugar beets, however, was forecast at only 23.4 million tons, which would be about 635,000 tons less than in 1961–62.

Higher production in the United States, Mexico, South America, Africa, Asia, and Oceania more than offset decreases in Cuba, western Europe, and eastern Europe (including the USSR).

WIDE WORLD

Members of the Supreme Court pose on November 19 for first new photograph in several years. In front, left to right, are Associate Justices Clark and Black, Chief Justice Warren, and Associate Justices Douglas and Harlan; in back are Associate Justices White, Brennan, Stewart, and Goldberg.

CENTRIFUGAL SUGAR PRODUCTION, BY MAJOR COUNTRIES[1]

(In thousand short tons, raw value)

Country	Average 1955–56 through 1959–60	1961–62	Prelim. 1962–63
Argentina	906	754	841
Australia	1,428	1,512	1,966
Brazil	3,110	3,928	3,950
Cuba	5,883	5,400	4,600
Dominican Republic	833	960	900
France[2]	1,571	1,878	1,648
Germany, West[2]	1,590	1,585	1,779
Hawaii	1,013	1,100	1,100
India	2,737	3,775	4,128
Indonesia	903	707	783
Italy[2]	1,271	1,033	1,047
Mexico	1,380	1,649	1,791
Peru	800	904	937
Philippines	1,356	1,668	1,739
Poland[2]	1,152	1,662	1,433
Puerto Rico	1,036	1,050	1,100
South Africa	989	1,174	1,300
Taiwan	963	800	800
USSR[2]	5,552	7,300	7,200
United Kingdom[2]	818	926	851
United States (continental):			
Beet	2,088	2,440	2,650
Cane	572	858	960
World:			
Cane	29,197	31,975	32,811
Beet	20,214	24,045	23,409
Total	49,411	56,020	56,220

[1] Centrifugal sugar includes cane and beet sugar produced by the centrifugal process, and is the principal kind used in international trade. The production of each country is credited to the May–April year in which harvesting and sugar production began. [2] Beet sugar.

SULFUR

In 1961 world output of sulfur in all forms was 7% higher than in 1960, and set a new record. United States contribution to the total world output of elemental sulfur was 15%, the same as in 1960.

United States sulfur output in 1961 included increases of 9% in Frasch sulfur and 12% in recovered sulfur. Total imports included 649,000 long tons of Frasch sulfur from Mexico (which went principally to east coast markets) and 182,000 tons of sulfur from Canada (the recoverable sulfur went to Northwest markets). Exports declined because of a slower rate of industrial growth in the overseas market. In the first 10 months of 1962, output of native sulfur was 3,709,150 long tons and that of byproduct sulfur was 650,752 tons.

(See Mineral Production for table showing output by major sulfur-producing countries.)

SULFUR IN THE UNITED STATES

(Thousands of long tons)

	1958	1959	1960	1961
Total output	6,141.2	6,167.7	6,660.5	7,170.3

SUPREME COURT, U.S.

On Jan. 1, 1963, the personnel of the Supreme Court of the United States was as follows: chief justice, Earl Warren; associate justices, Hugo L. Black, William O. Douglas, Tom C. Clark, John M. Harlan, William J. Brennan, Jr., Potter Stewart, Byron R. White (q.v.), and Arthur J. Goldberg (q.v.). Justice White replaced Charles E. Whittaker, who retired March 29, 1962, and Justice Goldberg succeeded Felix Frankfurter, whose retirement was announced Aug. 29, 1962. The two Kennedy appointees, both Democrats, change the court's political alignment to six Democrats and three Republicans. The salary of the chief justice is $35,500, and that of the associate justices is $35,000.

During the term which began in October 1961 and ended in June 1962, the Supreme Court handed down 101 opinions, of which 16 were per curiam. Sixty-three per cent of these cases were decided by a divided court, with five cases being 5–4 decisions. There were three 5–3 opinions, seven 4–3 opinions, and one case decided by an evenly divided court. Because of illness and changes in the court, the figures are not readily comparable with those of other years. Seventy-seven cases (all but 24) involved either the government of the United States or of a state. Of the cases decided by opinion in which the federal government was a party, 14 involved criminal law, 8 dealt with federal taxation, 9 involved business regulation, and 5 concerned labor relations.

Justices Black and Stewart each wrote 12 opinions, the most written by any one justice. They were closely followed by Justices Douglas and Clark (11 each) and by Chief Justice Warren and Justices Harlan and Brennan (10 each). Justice Harlan was the chief dissenter, with 29 such votes. The court disposed of 2,157 cases during the 1961–62 term, leaving 428 cases on the docket at the end of the session.

(For a discussion of the Supreme Court's principal decisions in 1961–62, see Law; United States.)

Richard L. Hirshberg,
Attorney at Law.

SURGERY

Among the developments in surgery reported in 1962 were the treatment of ulcers through local cooling of the stomach, the use of dextran to im-

prove the flow of blood, and the use of heat with radiation to treat cancer.

Gastric Hypothermia.—Control of massive hemorrhage from the stomach by local cooling was reported in 1958 from the Department of Surgery of the University of Minnesota Medical School by Dr. Owen Wangensteen and his colleagues. Cooling was achieved by continuous perfusion of an admixture of absolute alcohol and ice water through an inlying stomach balloon. From the beginning, investigators believed that the suspension of gastric digestion observed during cooling could influence favorably the ulcer diathesis.

Wangensteen indicated that the critical temperature for freezing the stomach lining for an hour without injury was in the area of −25°C. Alcohol was used as a coolant, with the addition of a "booster" of frozen carbon dioxide.

These investigators reported on 24 duodenal ulcer patients, 10 of them in some detail. An 87% decrease in overnight secretion of gastric juice and a decrease in the amount of free acid within the stomach was shown by the 10, whose stomachs were frozen at −17° to −20°C. for an hour. Six had no free acid when studied later, and all had relief from stomach symptoms.

Patients with gastric ulcers appeared less able to tolerate the distension of the gastric balloon during the cooling procedure.

It was concluded that the secretion of gastric juice may be suppressed by prolonged gastric cooling, especially by an hour of actual freezing of the stomach during which the stomach lining is maintained at a temperature of −10° to −15°C. for more than half that time. Another effect was the disappearance of the hormonal response to food, a response which produces further secretion of acid and digestive enzymes by the stomach lining.

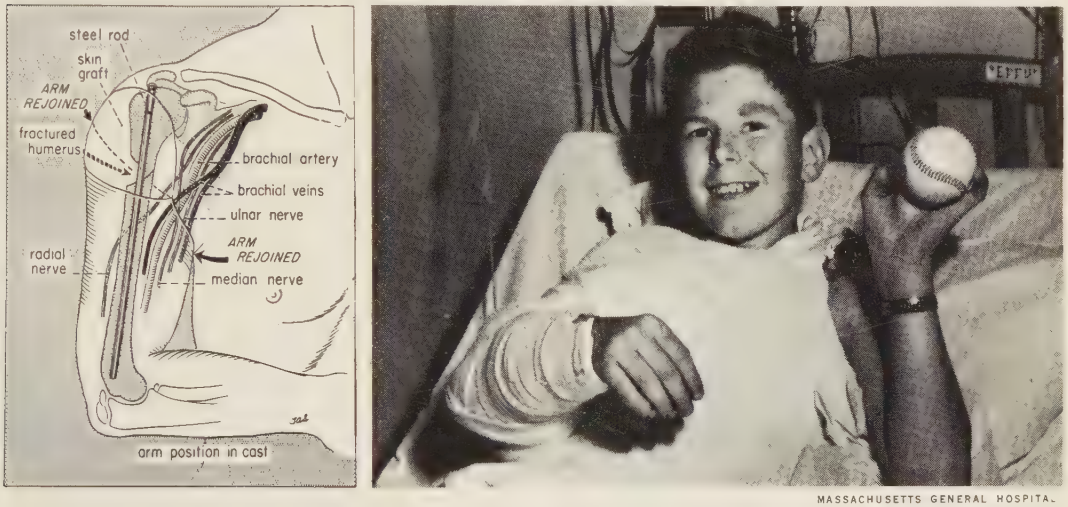
The authors indicated that freezing of the stomach lining had become useful in the control of many manifestations of peptic ulcer, that symptomatic relief of symptoms was the rule, and that the treatment was followed quite regularly by X-ray evidence of healing of duodenal ulcers. In animals the potential digestive activity of gastric juice had been suspended for an indefinite period, producing a "physiological gastrectomy." When well controlled, no harm was observed to attend the actual freezing of the stomach.

Dextran.—A substance used extensively as a substitute for whole blood and plasma, dextran is a water-soluble high-molecular carbohydrate which is formed in solutions of sugar (sucrose) infected with the bacterium *Leuconostoc mesenteroides*. The dextran molecule is built of glucose units linked in long, branched chains. The molecular weight of dextran may be very high, of the order of magnitude of many millions. By partial hydrolysis, dextran preparations of lower molecular weight can be made.

Native dextran of very high molecular weight produces severe aggregation of blood cells in blood vessels. Dextran fractions of molecular weights below 80,000, however, not only have no aggregating effect, but also reverse aggregations. Various sized aggregates were studied. Molecular weight distribution had to be regulated within narrow limits, since low-molecular-weight dextran is rapidly excreted through the kidney. Two varieties are now used clinically: a low-molecular-weight material, used as a "flow-improver" when capillary flow is impaired by aggregation of blood cells; and a larger-molecular compound, used when a pure plasma-expanding effect and some delay in the excretion of the dextran are desired.

At the annual Clinical Congress of the American College of Surgeons in Chicago in October 1961, Dr. D. Lepley, Jr., Dr. C. J. Mani, and Dr. Edwin H. Ellison, from the Division of Surgery of the Marquette University School of Medicine, reported on studies of the acute occlusion of the superior mesenteric vein, which drains the uppermost portion of the intestinal tract. Within one-half hour after occlusion, the intestines of all experimental animals became purple and swollen and lost all motility, and each animal succumbed. In all studies, the animals were given a specified amount of fluid, regulated by the weight of the animal, during a one-hour period. One hour after this infusion of fluid, the ligature was removed from the vein. Appropriate antibiotics were also given.

An infusion of normal salt solution was also given in the manner described, and again there were no survivors. Medium-molecular-weight dextran, the volume-expanding variety, was then given in the same dosage. Of the animals so treated, 40% survived and some weeks later were found to have grossly normal intestinal tracts.



MASSACHUSETTS GENERAL HOSPITAL

Everett Knowles, 3d, age 12, whose right arm was severed at the shoulder in a train accident on May 23, is shown in Massachusetts General Hospital, Boston, after the arm was sewn back. Diagram (left) illustrates the intricate surgery involved.

When low-molecular-weight dextran was used, a 20% mortality occurred. In further studies, the middle cerebral artery in the brains of dogs were occluded, whereupon all of the animals developed areas of death of brain tissue. An infusion of low-molecular weight dextran immediately prior to the occlusion of the artery resulted in much smaller areas of permanent damage.

Dextran has also been used to treat vascular disease patients. Operations of the smaller arteries had not been as successful as those on larger ones, and operations on arteries of 3 millimeters or less in external diameter had been almost universally unsuccessful owing to postoperative thrombus formation. At the Forum on Progress in Surgery at the Southeastern Surgical Congress in Louisville, Ky., a gold-medal paper by Dr. Milton F. Bryant, Dr. S. S. Brewer, and Dr. W. L. Blood, of Atlanta, Ga., reported investigations of thrombosis in small arteries of experimental animals treated by the infusion of dextran solutions. In these studies, the artery was opened and its lining removed for a small distance. The artery then was closed and observed. Approximately 90% of the arteries so treated were occluded by blood clots within two hours. The patency rate following the administration of dextran, however, was 90%. Several patients who required removal of arteriosclerotic obstructions from arteries measuring 3 millimeters or less in external diameter were given a dextran solution, and patency of the vessel was maintained in each case.

At the University Hospital in Baltimore, Dr. C. Thomas Flotte and Dr. E. F. Cox demonstrated the effectiveness of these solutions in treating acute occlusions of leg veins occurring after injury and pregnancy and in certain disease states. Among patients admitted to a large charity hospital in the South, it was estimated that 0.19% developed a blood clot in the leg vein, which in some cases broke off, became entrapped in a large vessel in the lung, and resulted in death. In this hospital in 12 years 1,223 patients suffered from this entity. Dextran was expected to have outstanding value in such cases. It has none of the drawbacks of other drugs used to prevent blood coagulation.

Heat Therapy for Cancer.—Many cancers are more susceptible to destruction by heat than are the tissues they grow in. Heat treatment was explored and used on humans by Dr. George Crile, Jr., at the Cleveland Clinic, Cleveland, Ohio, who also observed that heat acts synergistically, or perhaps additively, with roentgen irradiation in the treatment of certain cancers.

In June 1960 it was noted that a mouse tumor regressed after exposure to a temperature of 42°C. for two hours. This effect was reproducible. Pigmented tumors (melanomas) implanted on the feet of mice were sometimes destroyed by immersion for 30 minutes in water at 44°C., the temperature of a comfortably hot bath. In most instances, there was no damage to the normal tissues of the foot. Animals cured at the end of 21 days had no recurrence during three months of later observation.

The tumor had been moderately resistant to X-ray irradiation in doses up to 1,000 roentgens. But when it was heated to 44°C. for 30 minutes and immediately treated with 1,000 roentgens of irradiation, there was complete regression of tumor in 20 of 25 animals treated.

The studies were repeated on another type of tumor, a sarcoma, in female Swiss mice, 3–4 weeks old. Mice with tumors on their feet were exposed to temperatures ranging from 41° to 47°C. At 41°, destruction of the tumor required many hours of exposure. At 42°, 120 minutes was required to destroy tumor in more than 50% of the mice; at 43°, 60 minutes were required; at 44°, 30 minutes; at 45°, 15 minutes; and at 46°, 7½ minutes. Thus, the required exposure time was halved with each degree the temperature was raised.

The effects of heat were visible immediately. The tumor turned black within 24 hours and fell off at about the seventh day. If recurrence took place, it usually did so within two weeks.

Heat which was insufficient to destroy the tumor made it temporarily resistant to more heat. Conventional anticancer drugs did not seem to enhance the effect of heat on tumors.

Six patients were studied for the effects of heat and radiation therapy. Five patients had advanced incurable disease for which no further surgical or roentgen therapy seemed feasible. Three patients with widespread breast cancer were treated with hot packs at exposures ranging from 24 hours at 42°C. to one-half hour at 48°C. In each instance there was striking regression of cancer in the heated area. Skin metastases from cancer of the stomach showed no regression in one patient treated as above.

One patient had recurrent cancer of the lower colon, which had invaded adjacent structures extensively; the area was irrigated for 20 minutes with water at 50°C. and irradiated with 1,000 roentgens by cobalt-60 teletherapy immediately thereafter. Two weeks later there was no visible tumor, but tumor was found by biopsy to be present in the deeper tissues of the pelvis. One month later, tumor was again visible.

A further study was made on one patient with a cancer of the rectum, which was to be removed surgically. The tumor was heated to 50–51°C. for 15 minutes, and given 1,000 roentgens of cobalt-60 teletherapy. Resection of the tumor was accomplished seven days later. Examination of the tumor showed only an occasional deep-seated tumor cell distinguishable in the heat-treated area.

These studies were found to be reiterations of work reported a third of a century earlier, and almost forgotten. The conclusions of Crile "suggest that some cancers in man have a spectrum of heat sensitivity similar to cancers in mice and rats. It is therefore likely that heat could be used as a valuable adjunct to the treatment of cancer, especially when it is employed in conjunction with radiation."

ROBERT W. BUXTON,
Professor of Surgery,
University of Maryland School of Surgery.

SURINAM

Situated on the north coast of South America, Surinam is an autonomous part of the Kingdom of the Netherlands. It has an estimated area of 55,144 square miles, and a population (1961 est.) of 318,000. The population is concentrated along the coast and consists chiefly of Creoles (comprising 39% of the population), Hindus (30%), and Indonesians (16%). The chief languages are Dutch and a popular tongue called Sranan-tongo. Paramaribo (pop. est., 113,000) is the capital and chief city.

Government.—Surinam has full autonomy in internal affairs, with matters of common interest to members of the Netherlands Realm decided jointly. The government is headed by a Dutch-appointed governor (Archibald A. Currie was appointed acting governor in 1962). He is assisted by a 35-member Legislative Council elected for a five-year term, and a cabinet headed by a premier (Severinus D. Emanuels took office on July 5, 1958).

Education and Religion.—Number of schools (with enrollments, 1958): 165 primary and secondary (54,136);

36 mission (1,248). There is also a medical school, a law college, a technical school, and two teacher-training schools. Main religious groups: Muslims, Hindus, Roman Catholics, and Moravian Brethren.

Finance.—Estimated government revenue, 1961: 88.4 million Surinam guilders; expenditure, 81.1 million (the Surinam guilder equals about U.S.$0.53). Expenditure under the 10-year development plan (1956–65) totaled 21.3 million guilders in 1961.

Transportation and Communications.—Public railways total 83 miles; main roads, 620 miles. The last link of the East-West Road, traversing the entire width of the country, was completed in December 1962. International airlines serve Zanderij Airport, and internal air service is provided by Surinam Airways. Motor vehicles in 1961 totaled 15,932, and there were 5,450 telephones.

Economy.—Agriculture is the main occupation. Chief crops include rice (est. 1960–61 output, 177.9 million pounds), sugar, corn, coffee, and citrus fruits. Forests yield balata (168 metric tons in 1960) and timber. Manufactures include refined sugar (11,138 metric tons in 1960), alcohol (1.69 million liters), and molasses (6.59 million kilograms). Total exports, 1961: 76.6 million Surinam guilders; imports, 101.1 million. Surinam is one of the world's principal exporters of bauxite (3,405,000 metric tons in 1961).

SVALBARD. See NORWAY.

SWAZILAND. See BRITISH SOUTH AFRICAN TERRITORIES.

SWEDEN

Occupying the southern and eastern part of the Scandinavian peninsula, the European kingdom of Sweden borders on Norway on the north and west, and on Finland on the northeast. With an area of 173,622 square miles, it is slightly larger than California. More than one half of the land area is covered by forests, and only a total of 8,800,000 acres is tillable land.

Population.—As of Jan. 1, 1962, the population was estimated at 7,542,000. The major cities are Stockholm, the capital, with a population of 806,903 (Greater Stockholm, 1,167,211); Göteborg, 404,436; and Malmö, 233,370. Ten other cities have populations of over 50,000.

Government.—Sweden is a constitutional monarchy, with Gustaf VI Adolf (b. 1882, acceded 1950) as king. He exercises his powers through responsible ministers in the Council of State and presides at cabinet meetings. Dr. Tage Erlander, premier since 1946, heads a minority government of Social Democrats that took office on June 18, 1958. The Riksdag (Parliament) is bicameral, with both houses having equal power; elections to both are based on universal suffrage. The 151-member upper house (Första Kammaren) is elected indirectly for 8 years by county and city councils, and in 1962 contained 77 Social Democrats, 33 Liberals, 20 Center Party members (formerly Agrarians), 19 Conservatives, and 2 Communists. Elections to the 232-member lower house (Andra Kammaren) normally are held every 4 years. In the elections of Sept. 18, 1960, the Social Democrats won 114 seats; the Center Party, 34; the Liberals, 40; the Conservatives, 39; and the Communists, 5.

Education and Religion.—Education has been compulsory since 1842. School enrollments, 1960–61: elementary schools, 843,110; middle schools, 142,496; secondary schools, 55,366; adult folk high schools, 12,258. Enrollment at the four universities: Uppsala, 8,319; Göteborg, 3,212; Lund, 6,437; and Stockholm, 7,567.

The Evangelical Lutheran Church is the established church of Sweden. Uppsala is the metropolitan see, and its archbishop is titular head of the state church. Freedom of worship for other groups is permitted, and in 1961 there were 354,280 nonconformists.

Finance.—Government revenue, 1962 est.: 18,800 million kronor; expenditure, 17,200 million (1 krona equals U.S.$0.193). Revenues: sales tax, 2,700 million kronor; excise and customs taxes, 4,000 million; income and property taxes, 8,100 million. Expenditures: social welfare, 5,300 million kronor; defense, 3,200 million; education, 2,300 million. Capital investment fund: 1,700 million kronor. Total public debt: 21,625 million kronor on Jan. 1, 1962. Gold and foreign exchange reserves: 3,319 million kronor.

Transportation and Communications.—Merchant marine tonnage (1962), 3,980,000 (3,745,000 in 1961); roads and highways, 59,500 miles; railways, 9,625 miles. Air service by the Scandinavian Airlines System: 1,536,300 passengers in 1961. Other data (as of Jan. 1, 1962): motor vehicles, 1,450,000; motorcycles, 144,700; radio sets, 2,742,000; television sets, 1,030,000; telephones, 2,775,000.

Economic Indicators.—Gross national product: 7,489 billion kronor (up 9.2% from 1960). Index of industrial production (1935 = 100): 274 in 1961 and 284 in 1962. Cost-of-living index (1949 = 100): 167 in 1962 (163 in 1961). Number of unemployed workers: 8,500 in July 1962 (0.5% of labor force).

Manufactures and Minerals.—Chief industrial products (metric tons, 1961): wood pulp, 5,050,000 (1,375,000 tons exported); iron ore, 23,140,000 (19,800,000 tons exported); pig iron, 1,760,000; commercial iron and steel, 3,560,000; electric power, 38,380 million kw.-hr. (34,800 mi. kw.-hr. in 1960); shipbuilding, 757,000 gross tons; cement, 251,000 tons.

Agriculture.—Agriculture accounts for 8% of the gross national product with 13.3% of the population dependent on it. Chief crops (metric tons, 1961): wheat, 1,619,000 (820,000 in 1960); barley, 1,927,000 (850,000); rye and oats, 6,001,000 (1,425,000); potatoes, 1,570,000 (1,725,000); sugar beets, 1,870,000 (2,065,000). Dairy production (metric tons, 1961): milk, 3,997,000 (3,950,000 in 1960); butter, 71,000 (85,000); cheese, 62,700 (55,000); meat and pork, 356,000 (375,000).

Foreign Trade.—Total exports, 1961: 14.17 billion kronor (13.28 billion in 1960); imports, 15.11 billion kronor (14.89 billion in 1960). Principal exports (in million kronor in 1961): forest products, 4,200; iron ore, 1,050; machinery, 2,875; transport, 1,625; base metals and products, 1,775. Principal imports (in million kronor in 1961): base metals, 1,875; machinery, 3,025; fuel, 1,975; agricultural products, 2,000; textiles and clothing, 1,575. Exports, first half of 1962: 9,780 million kronor; imports, 10,259 million. Chief customers (with percentage of trade, 1961): European Economic Community countries, 40% of imports and 33% of exports; European Free Trade Association, 26% of imports and 36% of exports; United States, 11% of imports and 5% of exports.

Events, 1962.—Economic growth continued in both industrial production and exports. The level of steel production reached a higher figure than in 1960, and more ore was consumed as exports to Great Britain and West Germany declined. Although the export of forest products increased in 1962, the previous year showed a decline in timber cutting and in pulp, paper, and other products.

Part of the bright picture for 1962 was due to the successful negotiation of a new labor agreement (March 1962), which provided for an average increase of 2.75% in wages and longer vacations for workers. Membership in the Federation of Trades Unions and the Central Organization of Salaried Employees expanded to 1,879,261 persons. Cooperative societies increased their retail sales, while their control of agricultural production and farm product marketing continued. About 1,130,000 persons are members of the retail sales cooperatives, which have 663 societies. The first budget surplus in nine years reflected higher production, greater exports, and more prosperity. These trends were accompanied by improved agricultural harvests in both 1961 and 1962, with greater exports to Great Britain and West Germany.

The victory won by the Social Democrats in local elections in 1962 came as a surprise to everyone, including the Social Democrats. Prosperity and reduced taxes probably affected the electoral vote. Trends toward the use of indirect taxes and the lowering of income, corporation, and personal levies were reflected in the budget for 1962–63. The absence of great political issues caused some to question the need for four political parties, but cooperation between the three bourgeois parties was difficult to arrange.

A major event of the year was the retirement of Östen Undén, foreign minister since 1945, and his replacement by Torsten Nilsson. The major foreign policy question of 1962 was Sweden's membership in the European Economic Community, in which her neutral position would be at stake. In this connection, Sweden was concerned with the Soviet Union's demand for more specific terms as to defense cooperation with Finland and prior approval of Finland's entry into the EEC. The Swedish government strongly protested Soviet

and American nuclear testing. During the year, Sweden completed repayments on her Marshall Plan loans, thus clearing all obligations resulting from World War II and the postwar economic crisis. Sweden's participation in United Nations affairs continued as supplementary troops were sent to the Congo. The memory of Dag Hammarskjöld persisted after his national funeral at Uppsala in September 1961, and generous contributions were made to a commemorative fund.

The Royal Dramatic Theater visited the United States during the winter of 1961–62, and plans were made for subsequent visits by other tour groups. The Swedish film industry received many honors, including prizes for Ingmar Bergman's *Through a Glass Darkly* in both the United States and Europe. Bo Bergman, now 93, published a new book of poetry. The visit of ex-President Dwight D. Eisenhower in July 1962 was the occasion of a major celebration.

SWITZERLAND

Switzerland is a mountainous country of central Europe, forming a republican confederation of 19 cantons and six half-cantons. Area: 15,941 square miles; population (mid-1962 est.), 5,610,000. Principal cities and populations (1960 census): Zurich, 440,170; Basel, 206,746; Geneva, 176,183; Bern (the capital), 163,172; and Lausanne, 126,328. The four national languages are German (spoken by about 74% of the population), French (21%), Italian (4%), and Romansh (1%); the first three are the official languages.

Government.—The bicameral Federal Assembly in 1962 comprised the Council of States (Ständerat) of 44 members (2 from each canton), and the National Council (Nationalrat) of 196 members elected every four years. Party seating in the National Council (following the elections of Oct. 25, 1959): Socialists, 51; Radical Democrats, 51; Catholic Conservatives, 47; and Peasants, Artisans, and Middle Class (Farmers), 23. The federal franchise is limited to male citizens over 21 years of age, but women have the right to vote in local elections in the cantons of Vaud, Neuchâtel, and Geneva. Executive power is exercised by a Federal Council of 7 members who are elected by the Federal Assembly for four-year terms. The head of the Federal Council is chosen annually by the Assembly, and acts as president of the confederation. Willy Spuehler succeeded Paul Chaudet as president on Jan. 1, 1963.

Education and Religion.—Illiteracy is virtually nonexistent, and more than 60% of school-age children attend school. School enrollments, 1959–60 school year: primary, 571,548; secondary, 121,693; and university, 21,251 (1960–61). There are also many commercial, trade, art, technical, and other specialized schools on the secondary level. Principal religions: Protestant (approximately 58% of the population); Roman Catholic (41%); and Hebrew (0.6%).

Finance.—Government revenue, 1961: 2,959.7 million francs (3,316.1 million in 1960); expenditure, 3,058.4 million (2,601.1 million). The Swiss franc equals U.S.$0.233. About 35% of the estimated 1962 expenditure (totaling 3,426 million francs) was for defense. Swiss gold and foreign exchange holdings: $2,760 million at the end of 1961 ($2,324 million a year earlier).

Transportation and Communications.—Transport networks (miles, 1959): railways, 3,180; main roads, 10,846. Switzerland has a navigable outlet to the North Sea via the Rhine waterway; the Swiss merchant marine aggregated 26 vessels and 139,693 gross registered tons at the end of 1960. Swissair, the national airline, carried 1,139,918 passengers in 1961; 36 foreign airlines also operated scheduled flights. Other data for 1960: passenger cars, 509,300; commercial vehicles, 60,600; radio receiver licenses, 1,445,000; television receiver licenses, 129,000; telephones, 1,658,715.

Economic Indicators.—Gross national product, 1961 est.: 40 billion francs (up 8% from 1960). Agricultural production index (1952-53–1956-57 = 100): 112 in 1960–61 (106 in 1959–60). Cost-of-living index (1953 = 100): 110 in 1961 (108 in 1960). Number of foreign workers: 548,312 in August 1961 (about 20% of the labor force), compared with 435,476 in August 1960.

Industry.—Chief manufactures and 1961 export values: chemicals, 1,669 million francs; watches and clocks, 1,313 million; and electrical equipment, 515 million. Other manufactures are aluminum and metal products, pharmaceuticals, plastics, textiles, cement (3.6 million metric tons produced in 1961), and paper (510,000 metric tons). Major industries include construction (23,988 dwelling units completed in 1961) and tourism (28 million overnight hotel occupancies in 1961, or 9% more than in 1960). Electric power production (1961): 22.2 billion kw.-hr. (up 17% from 1960).

Agriculture.—Agriculture is based on dairying and livestock, chiefly cattle (1,759,000 head in 1961). Estimated dairy output (metric tons, 1961): milk, 2,244,000; butter, 31,500; and cheese, 66,200. Chief crops and yields in the 1961–62 crop year (in thousands of metric tons): wheat, 311; barley, 80; rye, 44; oats, 44; beet sugar, 36; potatoes, 1,270; and grapes for wine, 80.

Foreign Trade.—Total exports, 1961: 8,822 million francs (up 9% from 1960); imports, 11,644 million (up 21%). Machinery accounted for 33% of the 1961 export value; chemicals, 20%; and watches, 15%. Principal imports include raw materials, fuels, machines, automobiles, and foods. Switzerland's chief trading partners are other European countries (particularly West Germany), which in 1961 supplied 79% of total Swiss imports and took 66% of Swiss exports; and the United States, which provided 10% of total imports and received 9% of the exports.

Events, 1962.—Swiss voters rejected a proposed constitutional amendment to ban nuclear weapons from Swiss territory. In a national referendum (limited to male suffrage) held on March 31 and April 1, the proposal was defeated by a vote of 537,387 to 286,858. The government had opposed the amendment on the grounds that there was no immediate question of equipping the Swiss Army with nuclear arms, and that it would be unwise to prohibit now a course of action which might have to be taken in the future. The ban was actively supported by pacifists, some Protestant clergymen, a few Social Democrats, a number of labor unions, and the Communist Party.

In another referendum, held on November 4, the electorate approved a constitutional amendment fixing the number of seats in the National Council at 200 (compared with the present 196 seats). The number of Council seats previously had varied according to the latest census populations.

The Swiss government, which had applied for association with the European Economic Community (Common Market) on Dec. 15, 1961, presented its case for tariff-free association to the Community's Council of Ministers in Brussels on Sept. 24, 1962. Switzerland did not seek full membership but agreed to accept most of the Common Market's regulations, excepting certain rules which conflicted with traditional Swiss neutrality. For example, Switzerland insisted on retaining her right to conclude independent trade arrangements with countries not belonging to the Common Market, including Communist nations.

The economy in 1962 again attained record levels in both production and domestic consumption. Sparked by unprecedented heavy consumer demand, retail sales at midyear were up 7 to 8% from a year earlier, and Swiss imports, particularly of luxury goods, also increased considerably. Exports by the important watch industry in the third quarter of 1962 were up 4% from the high level recorded in the comparable period of 1961. Impressive gains were also registered in machine production, other manufactures, construction, and tourism, which from January through August 1962 recorded 23.7 million overnight hotel occupancies, or 800,000 more than in the same period of the previous year. The principal economic problem was again a shortage of labor; there were only 199 unemployed persons in the country and 6,085 job vacancies at the end of September, while the number of foreign workers at the end of August had increased by 17% to 644,700.

SYNTHETICS. See Chemistry; Plastics; Rubber; Textile Industry.

SYRIA

Located in western Asia on the Mediterranean Sea, the Syrian Arab Republic has an area of about 72,000 square miles and a population (1961 est.) of 4,930,000, excluding 125,000 Palestinian refugees. Principal cities and population (1960 est.) are: Damascus, the capital, 491,398; Aleppo, 483,083; Homs, 157,754, and Latakia, the principal port, 66,335. Arabic is the official language.

Government.—During Syria's first 12 years of independence (1946–58), a parliamentary, cabinet-form of government existed. From February 1958 to September 1961, Syria was merged with Egypt in the United Arab Republic (UAR), and was governed by an Executive Council made up mostly of UAR President Gamal Abdel Nasser's followers. Since Syria's withdrawal from the UAR on Sept. 28, 1961, serious efforts have been made to re-establish representative government. The government is headed by a president (Nazim el-Kudsi, elected Dec. 14, 1961) and a premier (Khaled el-Azm, installed Sept. 17, 1962, succeeding Ahmed Bashir el Azmeh). Pending the adoption of a new constitution, legislative functions are exercised by the 172-member Constituent Assembly, elected Dec. 1–2, 1961. See also below *Events, 1962*.

Religion and Education.—More than 75% of the population are Muslims of the Sunni sect; 12% are Muslims of other sects (Alaouites, Ismailis, Shi'ites, Druses, and others); and 12% are Christians, mainly Greek Orthodox, Armenian Orthodox, Greek Catholics, and Syriac Orthodox.

Education is free and compulsory for the first six years. In 1959–60 there were 3,261 primary schools with 423,958 pupils; 341 secondary and vocational schools with 75,816 pupils; 10 teacher-training schools with 1,599 students; and the Syrian University in Damascus with some 15,000 students. In addition there were some 500 private schools with about 125,000 pupils.

Finance.—The ordinary budget expenditure for July 1962–December 1963 totaled £S943.4 million (£S831.6 in the previous 18-month period); revenue was estimated at £S832.5 million. The development budget for the same period called for an expenditure of £S622 million (£S657 in previous 18-month period). The budget expenditure for the 11 autonomous government agencies was estimated at £S306.7 million (£S243.6 million); revenue, £S417.6 million.

On July 11, 1962, a liberalization of the exchange controls of February 1961 restored to Syrian currency a large measure of convertibility. On July 24 the Syrian pound was devalued from 3.57 to 3.82 to the U.S. dollar. In May 1962, Syria was granted a $41.6 million stabilization fund, contributed by the United States, West Germany, Italy, and the International Monetary Fund.

Transportation and Communications.—The planned extension of railroad lines from Latakia to Hasaka on the Iraq border did not materialize in 1962, and Syria's total railroad mileage remained under 600. There are 2,300 miles of first-class roads, about 1,500 miles of second-class macadamized roads, and 3,800 miles of dirt roads. In 1960, private cars numbered 14,100; trucks, 10,000; buses, 1,200; and taxis, 1,300. In 1959 there were 43,800 telephones. Civil aviation is well developed, with the principal airports at Damascus and Aleppo served by Syrian Airways and 21 foreign airlines. There is a government broadcasting system and a television station in Damascus.

Production.—Despite the accelerated rate of industrialization, Syria is still predominantly an agricultural country. Major crops are wheat (755,000 tons in 1961; 533,000 tons in 1960) and barley (330,000 tons in 1961; 150,000 tons in 1960). The principal export crop is cotton, which totaled 124,456 tons in 1961–62 (110,000 in 1960–61). Other crops include millet, corn, rice, lentils, sesame, tobacco, sugarcane, and sugar beets. After four years of drought and poor yields, agricultural yield of many crops in 1962 exceeded that of 1957—hitherto considered the best in 25 years. However, the expected increase in agricultural production due to the completion of the Rastan Dam on the Orontes River in 1961 has been only partially realized.

Foreign Trade.—Syria still suffers under a severe adverse balance of trade, although the situation in 1962 was somewhat better than in 1961. Total exports, 1961: £S352.5 million (£S367.3 million in 1960); imports, £S611.0 million (£S766.0). Chief exports, 1961: cotton, £S205.7 (£S174.7 in 1960); wool, £S17.5 (£S17.9). Major imports are machinery, petroleum products, and manufactured goods. The United States was the chief supplier in 1961 ($27 million), followed by West Germany, Great Britain, Italy, France, and the Netherlands.

Events, 1962.—The year 1962 was one of turmoil and trial, marked by the instability of the government. With remarkable astuteness, however, Syria's civilian and military leaders succeeded in setting up a series of provisional governments which functioned as parliamentary regimes. As the year drew to a close, the succession of more than a half-dozen coalition cabinets proved that neither the civil nor the military authorities intended or were able to impose an unpopular regime on their countrymen.

In his first public statement after taking office on Dec. 22, 1961, Premier Maarouf Dawalibi pledged on January 4 a domestic economy of "constructive socialism" and a foreign policy of nonalignment with either East or West. In February, Rashad Barmada, defense minister, led a mission to Czechoslovakia and the USSR "to seek economic assistance and supplies for Syria's armed forces." On February 15, Adnan Kuwatly, minister of economy, declared that in seeking loans to cover its budgetary deficit, Syria would not confine itself to any one country. On March 4, Premier Dawalibi disclosed the obtaining of a $16 million short-term loan from West Germany (see also above *Finance*).

On February 14 the Constituent Assembly passed a law canceling the nationalization laws of 1961, enacted when Syria was part of the United Arab Republic. However, it also approved a law imposing some government control over big business. On February 17 the law which had sequestered British, French, and Belgian property was voided.

Agreement was reached on March 9 with the Trans-Arabian Pipeline Company for the payment to Syria of $10 million for retroactive petroleum transit fees and for the increasing of the annual payment for the piping of oil to Banias from $1,250,000 to $3,000,000.

While these moves were taking place on the economic front, internal political unrest was assuming dangerous proportions. On March 28 the government was overthrown by a coup led by the heads of the army and air force. On April 1 a second revolt broke out in Aleppo, led by a group of the self-styled "free officers" who appealed to the UAR for military support. President Gamal Abdel Nasser declared, however, that the UAR would give aid to neither side, but offered to mediate. During the next few days an agreement was worked out in Homs by the military and civilian leaders which called for the departure from Syria of the leaders of the military coup, the return of President Kudsi to office, and the formation of a transitional government of experts to hold new elections and a referendum on the question of rejoining the UAR.

On April 13, President Kudsi assumed his office at the request of Gen. Abdel Karim Zahreddin, commander in chief of the armed forces, and on April 16 a new government was formed, with Ahmed Bashir el Azmeh as premier. One of the first moves of the new government was the renationalization of Khumassia, the powerful business concern which controlled a large section of Syria's economy, including textiles, cement, and detergents. On May 22 all foreign banks were nationalized, with the government obtaining 25–40% of the shares.

Relations with the UAR continued to remain unsettled. On May 6, Col. Abdel Hamid Serraj, former vice president of the UAR and a strong supporter of President Nasser, escaped from the Mezza prison hospital and fled to Egypt. On June 6, Premier Azmeh called for an Arab federal union in which Syria would retain its sovereignty; and on August 27, Syria appealed to the Council of the Arab League to condemn the UAR's interference in Syria's internal affairs.

Political instability continued. On September 14, Khaled el-Azm was named premier; on September 20 the Constituent Assembly was dissolved, and the Azm government began to rule by decree.

During 1962, Syria's relations with Iraq improved. On March 14, President Kudsi met Premier Kassem of Iraq for talks on "closer military and political cooperation." Syria's relations with Israel remained strained, with several border incidents occurring during the year (see also UNITED NATIONS). On September 9, Syria announced the resumption of full diplomatic relations with France, thus restoring the normal relations which were broken during the Suez invasion of 1956.

TAIWAN

The island of Taiwan (or Formosa) is a province of China and the present seat of the Republic of China (Nationalist). It lies about 110 miles off the southeast coast of mainland China, and has an area of 13,885 square miles, which includes the Penghu (Pescadores) group (64 islands situated about 30 miles off the west coast) and other islands. The civilian population, as of May 31, 1962, was estimated at 11,302,000 (including the Penghu, Quemoy, and Matsu islands). Principal cities (with 1961 estimated populations): Taipei, the capital (927,432); Kaohsiung, a major port (275,600); Tainan (229,500); and Taichung (207,000).

Government.—The Republic of China is governed by a president, the National Assembly, and five councils or yuans which separately exercise executive, legislative, judicial, control, and examination functions. The Assembly re-elected Chiang Kai-shek to a third 6-year term as president of the republic on March 21, 1960. The president of the Executive Yuan (Chen Cheng, appointed in 1958) acts as premier. The Kuomintang exercises virtual one-party rule under the leadership of Chiang Kai-shek.

Taiwan's provincial government is headed by a governor (Gen. Huang Chieh, since November 1962), who is assisted by a 21-member Provincial Council appointed by the central government. A 66-member Provisional Provincial Assembly is elected for a 3-year term.

The Nationalist Chinese armed forces (about 600,000 men) are equipped and trained with the help of the United States, and the U.S. Seventh Fleet has protected Taiwan since 1950. A mutual defense assistance pact between the Republic of China and the United States has been in effect since 1955.

Education.—About 55% of all school-age children attended school in 1959. Primary education is free and compulsory. Number of schools (with enrollments, 1961): 1,795 primary (1,772,135); 361 secondary, vocational, and technical (316,984); 27 colleges and universities (chief of which is National Taiwan University), 30,000.

Finance.—Government revenue, fiscal year 1962: NT$7,952 million; expenditure, NT$8,068 million (NT$40.03 equal U.S.$1). About 81% of expenditure was for national defense and administration. Central Bank gold and foreign exchange holdings: U.S.$147 million at the end of 1961 (U.S.$136 million a year earlier). United States economic and military aid to Taiwan since 1951 has totaled more than U.S.$1.1 billion.

Transportation and Communications.—Transport networks and mileage: public railways, 590; private railways, 1,718; roads, 9,743 (1955). The 191-mile Cross-Island Highway linking Taichung in the west with Lotung and Hualien in the east was opened in 1960. Merchant marine (estimated gross registered tons, 1961): 373,000. Two domestic air services and four international airlines serve Taiwan. Other data for 1960: passenger cars, 8,100; commercial vehicles, 10,900; telephones, 98,030; and radio receiver licenses, 445,000 (1959).

Economic Indicators.—National income, 1961: NT$53,700 million (NT$48,008 million in 1960). General index of industrial production (1958 = 100): 143 in 1961 (129 in 1960). Index of agricultural production (1952-53–1956-57 = 100): 120 in 1960–61 (114 in 1959–60). Cost-of-living index (1958 = 100): 141 in 1961 (131 in 1960).

Manufactures and Minerals.—Industry accounted for 28% of the net national product in 1960, and was planned to contribute 33% by the end of the third four-year plan (1961–64). Chief industrial products (in thousand metric tons, 1961): coal, 4,231 (up 6.8% from 1960); aluminum ingots, 9,017 (up 9.2%); plastics, 7,054 (up 106.4%); petroleum products, 1,175 (up 7.2%); cement, 1,504 (up 27.1%); cotton yarn, 49 (up 20%); cotton fabrics, 186 million meters (up 5%); and electric power, 4,084 million kw.-hr. (up 12.6%).

Agriculture and Fishing.—Agriculture's share of the net national product was scheduled to be reduced under the third four-year plan from 29% in 1961 to 27% by 1964. Taiwan's bumper harvest in 1961 was featured by a record rice crop of 2,009,200 metric tons (up 5.1% from 1960), and a high sugar output of 924,000 metric tons (up 19.3%). Other chief crops (metric tons, 1961): tea, 19,000 (up 9.6%); sweet potatoes, 3,223,000 (up 8.0%); pineapples, 180,000 (up 7.9%); bananas, 129,000 (up 13.0%); peanuts, 108,000 (up 5.7%); soybeans, 56,000 (up 7.1%); oranges, 54,000 (down 1.9%); and wheat, 45,000 (down 2.2%). Fish catch, 1961: 312,439 metric tons (up 20.4% from 1960).

Foreign Trade.—Total exports, 1961: U.S.$196.6 million (up 20% from 1960); imports (exclusive of foreign aid), U.S.$208.9 million (up 10%). Imports financed by the U.S. International Cooperation Administration totaled U.S.$113.4 million. Chief exports and 1961 values: sugar, U.S.$57.6 million; rice, U.S.$9.4 million; and tea, U.S.$8.9 million. Chief imports: machinery, metal products, vehicles, fuels, chemical fertilizers, and foodstuffs. Principal trading partners are Japan, which in 1961 took 30% of Taiwan's exports and supplied 32% of imports, and the United States, which received 24% of total exports, and supplied 38% of Taiwan's imports.

WIDE WORLD

(*Left*) United States and Nationalist Chinese paratroopers participate in joint exercises over southern Taiwan in November. (*Right*) President Chiang Kai-shek reviews cadets of the Nationalist Army Academy on September 19.

The Year 1962 in Taiwan

Nationalist China continued its steady economic growth in 1962. The first rice crop of the year was a record harvest which yielded 1,042,000 metric tons, or 60,000 metric tons more than that in 1961. Industrial production also registered an increase in the first half of 1962. Taiwan's total exports in 1962 were expected to reach U.S.$240 million. Major industrial exports were estimated at U.S.$135 million, or a rise of U.S.$37 million from that of the preceding year. Taiwan's annual growth of over 8% in gross national product was the second highest in Asia—next only to Japan.

Taiwan's relatively stable economy, however, depended heavily on United States aid, which amounted to U.S.$105 million in fiscal year 1962. The large expenditure for maintaining over half a million troops continued to be a strain on the national treasury. In an attempt to balance its budget, the Nationalist government promulgated, on May 1, the Regulations for Special Defense Assessments, which imposed a 30–50% increase on a number of existing taxes. A provisional measure, the law was to expire on June 30, 1963.

During the mass exodus of Chinese from Communist China to the British colony of Hong Kong (q.v.) in May, the Nationalist government urged that Hong Kong authorities desist from sending back these refugees to the Chinese mainland. It offered to cooperate with all governments and relief organizations in solving the problem, and brought the question to the attention of the UN high commissioner for refugees. Taiwan also sent 1,000 metric tons of rice to Hong Kong for relief purposes. In spite of its own problem of overpopulation and fear of Communist infiltration, the Nationalist government took immediate steps to screen those who wished to resettle in Taiwan. (See also Refugees and Displaced Persons.)

As Communist China's economy suffered repeated setbacks and its relations with the Soviet Union continued to deteriorate, the Nationalists were led to believe that the time for overthrowing the Communist regime was near. In a speech on the occasion of National Youth Day on March 29, President Chiang Kai-shek called on the people in Taiwan to prepare for the "supreme task" of recovering the Chinese mainland. He said that the tyrannical policies of the Communist government had alienated the people and that the time for "smashing its iron curtain" had come, and therefore "we should not vacillate or hesitate" to deliver the Chinese people from tyranny.

Military operation against the mainland, however, could conceivably involve the United States in a war with Communist China. Under the mutual defense treaty of 1954, the United States agreed to defend Taiwan and the Pescadores against Communist invasion. During Assistant Secretary of State W. Averell Harriman's visit to Taiwan in March, the Nationalist government reportedly sought in vain to obtain United States approval for its plans to recover the Chinese mainland. In June, on the pretext that the Nationalists were planning an invasion of the mainland "with United States encouragement," Communist China proceeded to mass large numbers of troops and several hundred jet planes along the Fukien coast facing Taiwan. This concentration of force placed the Chinese Communists in a position to invade the Nationalist islands of Quemoy and Matsu with reasonable prospect of success. To forestall further attempts by Communist China to create a military crisis along the Taiwan Strait, the United States, at an ambassadorial meeting in Warsaw, informed Peking on June 26 that it would not support any attempt by the Nationalists to land their troops on the Chinese mainland. The position taken by the United States dashed once and for all Nationalist hopes that Washington could be persuaded to accept their plan of action. In September, Premier Chen Cheng resolutely announced that Nationalist China was determined to carry out its duty to recover the mainland "no matter what people in foreign countries might think."

On September 9, the Communist Chinese shot down a Nationalist Chinese U-2 plane in a reconnaissance mission over eastern China. The plane had been purchased by the Nationalists directly from the Lockheed Aircraft Corporation and was flown by a Chinese pilot. When Peking charged that the flight of the American-made plane was part of a "United States espionage program against socialist countries," the Nationalists declared that they had every right to fly over the mainland "since it is our own territory."

On April 4, during the visit of President Philibert Tsiranana of the Malagasy Republic to Taiwan, a treaty of friendship between the two countries was signed. The conclusion of a trade and economic agreement between Nationalist China and Paraguay on May 11 signified Taiwan's vigorous efforts to promote relations in Latin America. Retired Rear Adm. Alan G. Kirk, the new United States ambassador to Nationalist China, arrived in Taiwan on July 2.

Diplomatic relations between Laos and Nationalist China were formally established in May when pro-Western Premier Boun Oum of Laos visited Taiwan. But when the new coalition government of Laos was formed in September, it an-

THE TIMES, LONDON

Julius Nyerere is sworn in as president of the Republic of Tanganyika by Chief Justice Sir Ralph Wyndham on December 9, the day the nation gained its independence from England.

nounced the establishment of formal ties with Communist China. As a result, the Nationalist government severed diplomatic relations with Laos on September 7 and ordered the immediate closing of the Chinese embassy in Vientiane.

TANGANYIKA

Situated on the Indian Ocean coast of east-central Africa, the former British-administered United Nations trusteeship of Tanganyika attained independence within the Commonwealth of Nations on Dec. 9, 1961, and became a republic on Dec. 9, 1962. The country's area of 361,800 square miles includes 20,650 square miles of lakes. The population at the 1957 census was 8,788,466 (mid-1962 est., 9,560,000), comprising chiefly Bantu and other African tribes, and including 90,500 Asians and 22,700 Europeans (mid-1961 est.). The predominant spoken language is Swahili. The capital and chief port is Dar es Salaam (1957 pop., 128,742).

Government.—With the proclamation of the Republic of Tanganyika on Dec. 9, 1962, the post of British crown representative and governor general (held by Sir Richard Turnbull) ceased to exist. On that date Julius K. Nyerere, formerly prime minister of the country from May 1, 1961, to Jan. 22, 1962, was installed as the first president of Tanganyika, following his election to the new office in the presidential election held in early November (see below, *Events, 1962*). He heads the Tanganyika African National Union (TANU), which had won 70 of the 71 elected seats in the National Assembly in legislative elections of Aug. 30–Sept. 1, 1960.

Education and Religion.—Although separate schools for Africans, Asians, and Europeans have been maintained by the government, a single system of education was introduced in 1961. School enrollment, 1962 est.: 500,000 (about one fifth of the school-age population). Enrollments by educational levels, 1960: primary, 404,681; secondary, 58,893; technical, 3,473; and teacher-training, 1,474. The University College in Dar es Salaam, a division of the University of East Africa, was opened in 1961. Most Tanganyikans are animists. Many Muslims live in coastal areas, and there are a number of Christian missions.

Finance.—Government revenue, 1963 fiscal year est.: £28,413,000 (£28,768,000 in fiscal year 1962); expenditure, £31,481,000 (£29,161,000). The development budget for fiscal year 1961 totaled £6,180,000. Exchequer loans from Great Britain amounted to £3.5 million in 1961.

Transportation and Communications.—Transport networks (miles, 1961): railways, 1,850; main roads, 9,725; district roads, 10,542; local roads, 8,500. The road system is to be improved through a £4 million roadbuilding program under the country's 3-year development plan (1961–64). Tanganyika has 51 airfields and landing strips maintained by the government; East African Airways Corporation provides internal and external services. Passenger cars, 24,800 (1960); commercial vehicles, 8,700 (1960); telephones, 16,238 (1961); radio receivers, 18,000 (1959).

Agriculture.—Agriculture and forestry account for nearly 60% of the gross domestic product (totaling £185.4 million in 1961). Chief crops and 1961 outputs, which decreased below 1960 levels because of severe floods and drought, were as follows (in metric tons): sisal, 198,000 (about two thirds of the world output); cotton, 33,000; coffee, 18,000; sugarcane, 28,700; tea, 4,300; and pyrethrum, 1,200. Exports of logs and sawn timber totaled 509,000 metric tons in 1961; wattle bark, 1,760 metric tons; and hides and skins, 156,300 cwts.

Manufactures and Minerals.—Manufacturing is on a small scale and is confined largely to consumer goods, chiefly food products, textiles, shoes, cigarettes, and meerschaum pipes. Mineral production provides about 5% of the gross domestic product, and was valued at £7.5 million in 1961 (up 7% from 1960). Three fourths of the total mineral value is supplied by diamonds (685,000 metric carats exported in 1961); the other chief mineral is gold (90,000 fine troy ounces exported). Electric power production, 1961: 164 million kw.-hr. (up 6% from 1960).

Foreign Trade.—Total exports, 1961: £50.6 million (£56.6 million in 1960); imports, £39.7 million (£37.8 million). Chief exports and 1961 values: sisal, £14.1 million; coffee, £6.5 million; cotton, £5.9 million; diamonds, £5.8 million. Principal imports are cement, cotton goods, machinery, heavy consumer goods, and foodstuffs. Trade is mainly with Great Britain, Japan, West Germany, the Netherlands, and the United States, which in 1961 supplied 26% of Tanganyika's imports and took 10% of total exports.

Events, 1962.—Tanganyika adopted a republican form of government on December 9, but remained a member of the Commonwealth of Nations despite the fact that it no longer recognized the queen as the sovereign of the country. The government declared that the change was made to secure a system of government more in keeping with Tanganyika's status as an independent African state. The new constitution provided for an executive president elected by universal suffrage and empowered to appoint the cabinet and dissolve the National Assembly. The term of the Assembly was extended from four to five years, and future legislative elections were to be held simultaneously with the presidential election.

Julius K. Nyerere was installed as the nation's first president in formal ceremonies at Dar es Salaam on December 9. He had been elected to the office in early November, receiving 1,123,553 votes to only 21,279 for his opponent, Zuberi Mtemvu, candidate of the opposition African National Congress party.

Previously, on January 22, Nyerere had shocked his countrymen by resigning as prime minister only six weeks after Tanganyika attained independence. He explained that he wished to devote his full energies to reorganizing the ruling Tanganyika African National Union in order that the party might act as a bridge between the government and the people. Although there were reports that radical leaders within TANU had opposed Nyerere's moderate policies, Nyerere himself declared that he had difficulty in persuading the members of the party's executive committee to accept his resignation.

The new cabinet, whose members were personally selected by Nyerere, was headed by Rashidi Kawawa, minister without portfolio in the outgoing cabinet and a former labor union leader. One of Prime Minister Kawawa's first official acts was to propose constitutional amendments enabling Tanganyika to become a republic within the Commonwealth; the proposal was approved by the National Assembly on June 28. Kawawa served as prime minister until December 9, when President Nyerere installed a 15-member cabinet that was virtually the same as its predecessor.

Tanganyika continued to experience economic difficulties as the result of crop failures caused by severe drought and flood conditions in 1961. To encourage economic development the government in early 1962 set up two development companies

with an aggregate initial capitalization of $5.6 million, to be made available for commercial investment.

TARIFFS

The marked trend during the past decade toward the adoption of tariff classifications based on the Brussels Tariff Nomenclature by countries revising their tariffs continued during 1962. Countries which instituted tariff revisions during the year included Haiti, Libya, New Zealand, and the United Arab Republic, all of which adopted nomenclatures based on the Brussels model. In the United States, the enactment of the Tariff Classification Act of 1962 and the Trade Expansion Act of 1962 made the year the most significant in the field of tariffs since the early 1930's.

Tariff Classification Act of 1962.—The Customs Simplification Act of 1954, as amended, directed the U.S. Tariff Commission to study, revise, and consolidate United States laws prescribing the status of imported articles with a view to establishing schedules of tariff classifications that were logical in arrangement, to eliminate anomalies and illogical results in the classification of articles, and to simplify the determination of tariff classifications. The commission's study was published in November 1960, and reports supplemental to it were subsequently released.

On May 24, 1962, the Tariff Classification Act of 1962 was signed by the president. This law authorized the president to place the revised tariff schedules into effect as soon as he had taken the action necessary to bring the United States trade agreement schedules into conformity with the new tariff schedules. It was expected that the new tariff schedules, which were the first major revision of the United States tariff nomenclature since 1930, would be placed in effect sometime in 1963.

Trade Expansion Act of 1962.—In 1934 the president was authorized, under the Trade Agreements Act, to enter into trade agreements with other countries for the primary purpose of promoting United States exports, and, within certain limits, reducing duties on imports. Subsequently, the president's authority was extended—for varying periods and to varying degrees—on 11 occasions, the last of which expired on June 30, 1962.

The Trade Expansion Act of 1962 became law on Oct. 11, 1962. Like the earlier Trade Agreements Act, the Trade Expansion Act authorized the president to enter into trade agreements and to lower existing rates of duty. For the first time, however, the president was granted special authority to eliminate low rates of duty, and to eliminate certain other rates pursuant to agreements negotiated with the European Economic Community (EEC), or Common Market. The authority to enter into trade agreements was granted for five years, beginning July 1, 1962.

In general, the president was authorized to reduce the rate of duty on any article by 50% of the rate existing on July 1, 1962; in addition, duties of 5% or less could be reduced or eliminated, and, in trade agreements with the Common Market, duties on articles (except specified agricultural commodities) in any category for which the United States and the Common Market accounted for 80% or more of the world export value could be eliminated. In trade agreements with the Common Market, duties on specified agricultural products may be reduced, under certain conditions, by more than 50%. Finally, the president was authorized to reduce duties on tropical agricultural or forestry commodities by more than 50%, or to eliminate them, if the articles were not produced in significant quantities in the United States. Prior to his making the reductions under this latter authority, however, the Common Market must have made a commitment that the commodities would be granted nondiscriminatory import treatment and that their access into the Common Market would be comparable to the access those commodities had to the United States market. (See also INTERNATIONAL TRADE.)

General Agreement on Tariffs and Trade.—The fifth major round of tariff negotiations conducted within the framework of the General Agreement on Tariffs and Trade (GATT) was concluded in July 1962. The negotiations, which began in September 1960, were of four distinct types: (1) Renegotiations by GATT members with the member states of the EEC relating to certain tariff concessions previously made by the EEC but which were expected to be altered in establishing a common external tariff for the Common Market; (2) renegotiations by GATT members of concessions previously made to one another; (3) negotiations by GATT members for new or additional concessions; and (4) negotiations by GATT members with countries that desired to accede to the General Agreement. The fifth round of negotiations was the longest and one of the most complex in the history of the General Agreement. Excluding the renegotiations enumerated under the first two points above, the participating countries granted a total of more than 4,000 tariff concessions; the value of the trade covered by the concessions was estimated at nearly $5 billion.

Regional Arrangements.—The principal regional arrangements in 1962 were the European Economic Community (EEC), the European Free Trade Association (EFTA), the Latin American Free Trade Association (LAFTA), and the Central American Common Market.

In 1962 the member states of the EEC (France, Germany, Italy, and the Benelux countries) reduced the rates of duty applicable to commodities traded between one another. By October, rates on industrial commodities traded between member states were 50% below those existing on Jan. 1, 1957. Rates of duty on certain agricultural products traded within the EEC were also reduced during 1962; by October the cumulative reduction on these commodities was about 35%. During 1962 the member states of the EEC also further adjusted the rates of duty in their individual tariffs applicable to imports from nonmember countries toward those of the common external tariff for the entire EEC. Agricultural commodities were the items principally affected by the adjustments.

Members of the EFTA were Austria, Denmark, Norway, Portugal, Sweden, Switzerland, and the United Kingdom. Finland was, in effect, an associate member. Member countries of the EFTA, unlike those of the EEC, were to retain their individual tariffs on imports from countries outside the association. Member states of the EFTA were required to reduce, and ultimately to eliminate, duties on industrial commodities traded within the area of the association, however. By October 1962, EFTA members (including Finland) had reduced their duties on industrial commodities by 40% of the rates that were applied in early 1960. Additional reductions planned for late 1962 were scheduled to reduce the levels of duty applied by most member countries on industrial commodities to 50% of the 1960 rates. (See also EUROPE.)

The Latin American Free Trade Association which became effective in 1961, was composed of the following countries: Argentina, Brazil, Chile, Colombia, Ecuador, Mexico, Paraguay, Peru, and Uruguay. The Montevideo Treaty, which established the LAFTA, provided, among other things, for the gradual abolition of restrictions on existing trade among the participating states. The first step in abolishing these restrictions took place early in 1962 when all but one member country (Ecuador) engaged in a first round of mutual reductions of tariffs and other import charges on hundreds of products. Negotiations for additional reductions were held in the latter part of 1962. Substantially all duties and charges on commodities traded between member countries were to be eliminated by June 1973. The member countries of LAFTA, like those of EFTA, were free to retain their individual tariffs on imports from nonmember countries.

The five members of the Central American Common Market (Costa Rica, El Salvador, Guatemala, Honduras,

and Nicaragua) were parties to various agreements and treaties designed to facilitate trade between their countries and to integrate their economies. Most commodities traded within the area were to be free of duty within five years, and a common external tariff for the five countries was to be established. Measures designed to accomplish these ends continued to be implemented during 1962. (See also INTER-AMERICAN AFFAIRS.)

Member countries of the Equatorial Customs Union—Central African Republic, Chad, the Republic of Congo (Brazzaville), Gabon, and the Federal Republic of Cameroun—also introduced a common external tariff, and other African countries made proposals to establish a common market.

BEN DORFMAN,
Chairman, U.S. Tariff Commission.

TAXATION

As record highs in tax collections were being recorded in 1962, the federal government made provisions to stimulate industry by granting tax credits for modernization and by liberalizing depreciation allowances, to defer taxes on retirement funds for the self-employed, and to end some transportation and communications taxes.

Federal Tax Laws.—On Oct. 16, 1962, President Kennedy signed into law the Revenue Act of 1962. Its chief feature was a new 7% credit against tax for purchase of machinery and equipment. This credit was intended as an incentive to modernization and economic growth, and was expected to produce annual tax savings of over $1 billion. Other provisions of the new law established tougher tests for expense account deductions, ended or limited the preferential treatment of certain types of foreign income of American citizens and corporations, and established much stricter rules for reporting the payment of interest, dividends, and patronage dividends (P.L. 87–834).

A tax bill enabling self-employed professional and business men to set aside tax-deductible amounts for future use as retirement funds became law on Oct. 10, 1962 (P.L. 87–792). A self-employed person would be able to set aside each year, beginning with 1963, up to 10% of his net earned income, but not more than $2,500, and deduct half that amount. The income earned by the funds would be tax-free until they were drawn on retirement, when the amounts previously deducted and the income earned tax-free by the fund would become taxable.

Ceilings on medical expense deductions were doubled for 1962 and afterward. A married person filing a joint return had been limited to a maximum deduction of $10,000, and a single person to $5,000. These limits were raised to $20,000 and $10,000, respectively (P.L. 87–863).

Tax Rates.—Corporate and excise tax rates scheduled to drop on July 1, 1962, were extended for another year, with the following exceptions:

(1) The 10% transportation tax ended for bus and rail travel, and dropped to 5% for air travel, for transportation which began after Nov. 15, 1962; the tax on the domestic leg of international flights not stopping more than six hours in the United States was eliminated.

(2) The 10% communications tax on private lines or leased wires between fixed points used by a trade or business was scheduled to end on Jan. 1, 1963 (P.L. 87–508).

Liberalized Depreciation.—Recognizing the vast changes in machinery and equipment since the publication of depreciation rates in *Internal Revenue Bulletin F* in 1942, the Treasury modernized and simplified the entire depreciation schedule in *Depreciation Guidelines and Rules* (Revenue Procedure 62–21, July 1962). The hundreds of separate items listed in old *Bulletin F* were replaced by some 75 broad classes of assets in the new *Guidelines*, thereby simplifying considerably the process of determining the correct "useful business life" over which to spread depreciation deductions.

Supreme Court Decisions.—While the cost of traveling to and from a resort area for a medically necessary stay is deductible, the cost of meals and lodging while at the resort does not qualify as a medical expense. The legal fees paid by a husband to his wife's attorney for tax advice to her on a divorce and property settlement are not deductible by the husband, but he can deduct the legal fees paid to his own attorney for tax advice. (See also LAW.)

Other Court Decisions.—A businessman was allowed to deduct the costs of meals he ate while away on one-day business trips, over the Treasury's objection that meals and lodging should be deductible only if the business traveler is away from home at least overnight.

The president of a business group, who was required to attend meetings in various parts of the country, had his wife accompany him to help him fulfill his social and business obligations. His deduction of her expenses was turned down because he never asked his organization to reimburse him for them and because his wife attended mostly meetings at resort locations.

While a teacher may not deduct the cost of courses required to qualify her for a higher position, she may deduct the cost of courses needed for a salary increment in her present job. The depreciation on an automobile used regularly to visit a doctor's office is not deductible as a medical expense, although the cost of oil and gasoline is.

The cost of an accident and health insurance policy qualifies as a deductible medical expense, even though part of the insurance coverage is for regular cash payments during periods of disability, regardless of actual medical expenses incurred.

Treasury Rulings.—A medical expense deduction will be allowed for the amount by which the cost of a medically necessary home improvement, such as a stairway elevator for a heart patient, exceeds any value it adds to the home; thus, if a $1,500 improvement adds $500 of value to a home, $1,000 will qualify as a medical expense. Although a parent's visit to a child who is away from home for medical reasons is only partly for therapeutic reasons and partly for morale purposes, the entire cost of the trip is deductible as a medical expense.

Individuals could for the first time get their income tax refunds in United States E Bonds by so indicating on their 1962 returns. An employee who does some of his work at home is entitled to deduct as a business expense an allocable portion of his home expenses, such as rent, electricity, and gas, but only if he is required as a condition of his employment to provide his own space and facilities for regularly performing part of his duties. Proposed Treasury regulations setting forth extremely detailed record-keeping requirements for expense accounts under the 1962 Revenue Act drew a storm of protest from businessmen. The Treasury acknowledged the validity of these complaints by easing the requirements in the final version of the regulations.

Government Revenue Collections.—Federal tax collections for the fiscal year 1962 surged to a new record peak of $99,423,453,000, compared with $94,401,086,000 for fiscal 1961. Corporate income tax collections fell for the second consecutive year, but the drop was more than offset by higher excise and individual income tax revenues.

State tax collections continued their unbroken rise, reaching a total of $20,562,000,000 for the fiscal year 1962, as against $19,057,000,000 for the fiscal year 1961. Nearly all categories of state taxes produced higher revenues, with individual income tax collections showing the highest percentage of increase, 15.9%, and general sales and gross receipts tax collections next in line with a 12.4% increase.

STATE TAX COLLECTIONS, BY TYPE OF TAX[1]
(Fiscal years; amounts in millions)[2]

Tax source	1962 (prelim.)	1961	1960	1942
Total collections	$20,562	$19,057	$18,036	$3,903
General sales or gross receipts	5,068	4,510	4,302	632
Motor fuels	3,687	3,431	3,335	940
Alcoholic beverages	741	688	650	257
Tobacco products	1,077	1,001	923	130
Insurance	591	585	532	113
Public utilities	419	401	365	100
Motor vehicles licenses	1,559	1,517	1,468	431
Corporations licenses	460	446	426	93
Alcoholic beverages licenses	92	86	84	56
Hunting and fishing licenses	120	118	112	24
Individual income[3]	2,730	2,355	2,209	249
Corporation net income[3]	1,306	1,266	1,180	269
Property	642	631	607	264
Death and gift	521	501	420	110
Severance	450	451	420	62
Other	1,101	1,070	1,003	172

[1] Because of rounding, detail does not always add to total. [2] Amounts for 1960–62 are 50-state totals. [3] Individual income tax figures include corporation net income tax amounts for New Mexico in each fiscal year shown. (Source: U.S. Department of Commerce.)

The average per capita state tax was $112.86 for fiscal 1962, against $106.03 in fiscal 1961. Hawaii had the highest per capita state tax burden, $201.38, and Delaware was next with $199.06. Nebraska had the lowest, $66.22, followed by New Jersey with $69.07.

Local tax revenues for fiscal 1961 reached a record $19,606,000,000. The major portion, $17,175,000,000, came from property taxes, and $1,432,000,000 from sales and gross receipts taxes. (See also CENSUS DATA, U.S.)

Tax Developments in Other Countries.—Argentina imposed a 20% surcharge on taxable income for 1962–64, but individuals earning less than 50,000 pesos were exempt. Belgium completely revised its tax structure: individual rates went up to 55% in the top income bracket, with percentage reductions scaled to the number of dependents; corporate profits were taxed at a flat rate of 30%, plus an additional 5% on undistributed profits above $100,000 a year.

Chile imposed a 4% surcharge in addition to the regular tax on commercial, industrial, and professional income, while Costa Rica raised consumption taxes on beer, soft drinks, and cigarettes.

The Dominican Republic revised its tax system to include an income tax on wages and salaries, at rates ranging from 7 pesos in the lowest income bracket to 1,750 pesos in the 48,000-peso bracket. It also reduced the effective rates for all inheritance and gift tax brackets. Ecuador changed its income tax law to impose progressive tax rates on the upper income brackets. El Salvador replaced its single schedule of income tax rates for individuals with three separate rate schedules, applicable to individual income from work, capital, and mixed sources. The new rates were generally higher than the old, reaching a maximum of 76.5% on income over 195,000 colones.

Great Britain, for the first time in its history, imposed a tax on capital gains, although limiting this new tax to gains on sale of land held for three years or less and on stocks and bonds held for six months or less. The sales tax on television sets, radios, phonographs, records, cosmetics, and cars was cut to 25%; and the 27.5% sales tax on electrical appliances, cameras, and toys to 25%. India raised company taxes from 45% to 50%, increased personal income tax rates, and widened the incidence of its capital gains tax.

Italy replaced its former 20% tax on incomes of over 4 million lire from labor and capital with a sliding scale of rates reaching 24% on incomes over 100 million lire, and raised the 23% rate on income from capital to 26%. Mexico added a progressive surcharge ranging from 3% to 15% on net income of 180,000 or more pesos taxable under two or more schedules, and raised the rates on income from salary and wages.

Norway raised from 20,000 to 22,000 crowns the point at which personal income taxes become progressive. Portugal levied new sales taxes ranging from 10% on refrigerators, washing machines, and vacuum cleaners to 20% on higher-priced radio and television sets, furs, and jewelry. Taiwan imposed temporary surtaxes on all of its taxes, including a 30% surcharge on individual income tax.

LEON GOLD,
Chairman, Tax Department,
Research Institute of America, Inc.

TAYLOR, Maxwell Davenport

U. S. army officer: b. Keytesville, Mo., Aug. 26, 1901.

After graduating from the U.S. Military Academy in 1922, Maxwell D. Taylor was assigned to several engineering units and to the 10th Field Artillery. He taught French and Spanish at West Point (1927–32) and in the late 1930's studied Japanese in Tokyo. During World War II, he helped organize the Army's first paratroops, took part in airborne invasions in the Mediterranean and northern Europe, and in 1945 led the 101st Airborne Division into central Germany.

After the war, Taylor was superintendent of the U.S. Military Academy (1945–49), chief of staff for American forces in Europe, commander of the American Military Government in Berlin (1949–51), and deputy chief of staff for operations at the Pentagon. In 1953 he became commanding general of the Eighth Army in Korea and then U.S. Army commander in the Far East. From 1955 to 1959 he served as chief of staff of the U.S. Army.

On June 30, 1959, General Taylor retired and the following year published the book *The Uncertain Trumpet*, which was critical of Army organization and the Pentagon's emphasis on massive nuclear retaliation as opposed to conventional forces for limited actions. He served as chairman of the board of a Canadian utility in Mexico until it was nationalized (1959–60), then became president of the new Lincoln Center for the Performing Arts in New York City. After the failure of the Cuban invasion in April 1961, President Kennedy asked General Taylor to evaluate the role of intelligence services. On July 1, 1961, Taylor was recalled to active duty as military representative of the president. In October he headed a mission to reassess the position of the United States in Southeast Asia.

General Taylor examined the military assistance situations in Cambodia, Thailand, and South Vietnam in September 1962. He supported the administration's military policies on several occasions, and on October 1 replaced Gen. Lyman L. Lemnitzer as chairman of the Joint Chiefs of Staff. As such, he figured importantly in the top-level deliberations during the Cuban crisis in October.

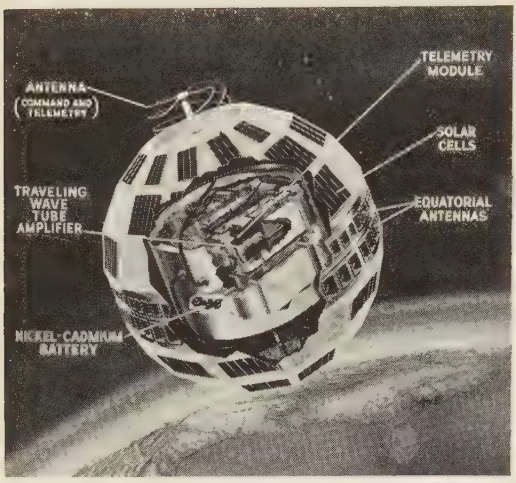
TEA

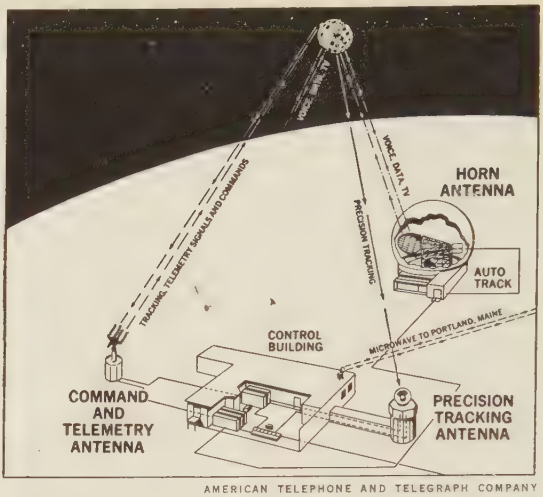
World production of tea in 1962 was forecast by the Foreign Agricultural Service of the U.S. Department of Agriculture at 2,255 million pounds, 2.5% more than the 1961 estimate of 2,120 million pounds. Thus, the rising trend of production during the past decade continued.

Tea production in Asia in 1962 was estimated at 2,119 million pounds, 2.3% more than in 1961. India, Ceylon, Indonesia, and Japan all showed increases. Indian production (about 35% of the world total in 1962) was forecast at 795 million pounds, bettering the previous record of 771.1 million established in 1961. Ceylon's output, helped by favorable weather and improved methods, was estimated at 475 million pounds, also a new record. Indonesia's 1962 estate tea crop was aided by adequate rainfall in the early months of the year and may have been about 98 million pounds. The 1961 crop was curtailed by drought and was only 90.4 million pounds. Japan's production, about 183.4 million pounds, increased 2.2% over 1961.

Production in Africa in 1962 was estimated at 118.2 million pounds, 5.1 million more than in 1961. Tea production is steadily rising in Africa due to increased acreage, new processing equipment, and the encouragement of native production, especially in Tanganyika. Record crops were forecast for the Federation of Rhodesia and Nyasaland, Mozambique, and Tanganyika, and a near-record output was forecast for Kenya.

South American production was expected to continue its upward trend with Argentina, the largest producer in the





AMERICAN TELEPHONE AND TELEGRAPH COMPANY

Drawings show the operation of the Telstar communications satellite (*left*) and its ground station at Andover, Me. (*right*).

area, harvesting a crop of around 13 million pounds in 1962. Argentina's average annual production for the 1950–54 period was less than 1 million pounds.

Per capita consumption of tea in the United States in 1962 was estimated at 0.63 pounds, compared with 0.6 pounds in 1959, 1960, and 1961.

TEA PRODUCTION IN PRINCIPAL COUNTRIES
(1,000 pounds)

	1950–54 average	1961	1962 forecast
India	624,604	771,120	795,000
Ceylon	331,822	455,200	475,000
China	170,504	348,000	340,000
Japan	117,805	179,437	183,400
Indonesia[1]	89,571	90,389	98,000
Pakistan	52,896	58,070	56,000
Taiwan	24,974	41,954	43,500
Rhodesia-Nyasaland	16,188	33,497	35,000
Kenya	15,094	27,869	30,000
Mozambique	7,902	22,487	23,500
Argentina	946	12,000	13,000
World	1,485,838	2,119,969	2,254,700

TELEPHONE

A new era in international communications began in 1962 with the orbiting of Telstar, the Bell System's experimental earth satellite. Telstar proved the practicability of transmitting telephone calls, television signals, photographs, facsimile, data, and telegraph messages via active relay satellites.

Telstar was launched from Cape Canaveral, Fla., on July 10 by the National Aeronautics and Space Administration (NASA). The American Telephone and Telegraph Company provided the satellite and the ground stations in the United States, conducted the experiments, and paid the costs. NASA furnished the launch vehicle, launching facilities, and telemetry services. It was the first time that a private company built a satellite at its own expense and paid the cost of launching with its own funds.

The Bell System's ground station at Andover, Me., is the principal sending and receiving point in the United States for signals relayed via Telstar. In Europe, ground stations are at Goonhilly Downs, England, and Pleumeur-Bodou, France. Transatlantic television programs, channeled through these ground stations, have been transmitted to United States commercial networks and the 16-nation European Broadcasting Union (Eurovision).

As a result of a NASA request for special assistance in the United States space exploration program, the Bell System founded Bellcomm, Inc., in March 1962. Jointly owned by the American Telephone and Telegraph Company and Western Electric Company, it is performing systems engineering studies for the Gemini and Apollo projects and other space missions.

During 1962 the Project Mercury communications network of tracking and ground instrumentation stations performed successfully in the three orbital flights of manned spacecraft. This global system was engineered and installed by an industrial team headed by Western Electric. (See also Radio and Television; Space Flight.)

Defense.—As prime contractor to the Air Force for the rearward communications system for the Ballistic Missile Early Warning System (BMEWS), Western Electric completed installations at Thule, Greenland, and Clear, Alaska, and continued work on routes from Fylingdales, England, to Colorado Springs, Colo.

Work was completed on the eastern third of a deep-buried, blast-resistant telephone cable system for the United States. Extension to the west coast is scheduled to be completed in 1964.

Early in 1962 the Strategic Air Command accepted the first operational complex of the Titan I intercontinental ballistic missile. The underground based Titan I is guided by a radio command system developed by the Bell Telephone Laboratories and produced by Western Electric. (See also Missiles.)

World Telephones.—At the beginning of 1962 there were about 150 million telephones in the world, 8.3 million more than in January 1961. The United States had over 77 million of these, and each of 18 other countries had 1 million or more telephones in service.

United States Service.—In 1962 approximately 97% of the telephones in the United States were dial-operated, and over 32 million customers could dial their own long-distance calls. Users could reach about 98% of the world's telephones. Four fifths of the nation's telephones are owned and operated by the Bell System; the rest are owned by slightly over 3,000 other telephone companies. Total investment in United States telephone and plant equipment reached more than $32 billion by 1962. The Bell System spent about $3 billion on new construction during the year.

Transoceanic Telephone Cables.—An undersea cable system, with ultimate capacity for 80 voice channels, was placed in service in January 1962 between the United

TELEPHONES BY MAJOR COUNTRIES, JAN. 1, 1962
(Countries with 1 million or more telephones)

Country	Telephones	Per 100 population	Percent increase over 1961
Argentina	1,360,205	6.40	5.0
Australia	2,322,900	21.92	4.8
Belgium	1,211,449	13.13	6.0
Brazil	1,046,621	1.42	2.3
Canada	6,020,000	32.66	5.1
Czechoslovakia	1,114,049	8.06	9.7
Denmark	1,132,259	24.28	5.6

United Kingdom[1]	8,609,000	16.25	4.1
United States	77,422,000	41.78	4.1
USSR	5,119,061	2.33	19.0

[1] As of March 31, 1962.

States and Bermuda. This system is a single coaxial cable equipped for two-way transmission.

Future systems will use a single cable and a two-way repeater, and will have a capacity of 128 simultaneous, two-way conversations. During the next few years, a third transatlantic cable is scheduled, and new cable systems will be built to link Florida with Jamaica, Panama, and South America, and California with Hawaii and Japan.

New Developments.—The Bell System announced that its first commercial electronic central office (ECO) will be in service at Succasunna, N.J., by mid-1965. Among its new customer services will be abbreviated dialing, automatic transfer of incoming calls, addition of a third party to an existing call, and a signal to indicate a call is waiting on a busy line. The successful testing of a trial ECO in Morris, Ill., was completed in March 1962.

The entire teletypewriter exchange (TWX) network in the United States was switched from manual to dial operation in August, reducing by more than one half the time required to complete TWX calls.

During the year, Wide Area Telephone Service (WATS) was extended to include about 5,000 business customers. WATS provides unlimited long-distance calling within a selected area for a fixed monthly charge.

In June, public air-ground telephone service was extended on a developmental basis to provide coverage in the northeast quadrant of the United States. The service is available in a 400-mile-wide corridor, centered over Pittsburgh and extending from the Mississippi River to the Atlantic Ocean.

TENNESSEE

A South Central state of the United States, Tennessee ranks 34th among the states in area (land, 41,762 square miles; inland water, 482) and 17th in population (3,634,000 on July 1, 1962, a 1.9% increase from the 1960 census figure of 3,567,089). Urban places with populations above 15,000 in 1960:

Bristol	17,582	Johnson City	31,187
Chattanooga	130,009	Kingsport	26,314
Clarksville	22,021	Knoxville	111,827
Cleveland	16,196	Memphis	497,524
Columbia	17,624	Morristown	21,267
Donelson (uninc.)	17,195	Murfreesboro	18,991
East Ridge	19,570	Nashville (*capital*)	170,874
Inglewood (uninc.)	26,527	Oak Ridge	27,169
Jackson	34,376	Woodmont-Green Hills-Glendale (uninc.)	23,161

Government.—Chief executive and judicial officers in 1962 included Buford Ellington (Democrat), governor, serving a four-year term; William D. Baird, lieutenant governor; Joe C. Carr, secretary of state; Ramon T. Davis, treasurer; William R. Snodgrass, comptroller; George F. McCanless, attorney general; Joe Morgan, commissioner of education; and Alan M. Prewitt, chief justice of the 5-member Supreme Court.

The Tennessee General Assembly, which convenes in odd-numbered years, comprised 27 Democrats and 6 Republicans in the Senate in 1962 and 80 Democrats and 19 Republicans in the House of Representatives.

Legislation, 1962.—Following the momentous March 26 decision of the U.S. Supreme Court holding that a group of Tennesseans had the right to seek redress in the federal courts for the failure of the legislature to reapportion legislative seats since 1901, Governor Ellington called the legislature into special session on May 29 to enact a new apportionment law. The act passed on June 6 increased urban representation slightly, but was adjudged unfair on June 22 by a three-man federal panel, which gave the next legislature until June 3, 1963, to correct the inequities. (See also REAPPORTIONMENT AND REDISTRICTING.)

The special session also submitted to the voters in the November election the question of calling a constitutional convention to meet in 1965 to consider changes in constitutional provisions regarding reapportionment, the governor's veto, the terms of office of legislators, and the limit placed on the length of legislative sessions. Under this plan the delegates would be elected in 1964 on the basis of the 1901 apportionment rather than the new law passed in 1962, and the major cities of the state therefore brought suit in an unsuccessful attempt to keep the convention issue off the November ballot. The calling of the convention was approved by the voters, but legal efforts aimed at preventing the holding of the convention continued.

Finance.—In the 1961 fiscal year, revenue of $565,604,306 included $312,712,870 from state taxes and $130,494,564 in federal funds. Chief tax yields were the 3% general sales tax ($106,769,331) and taxes on individual and corporate incomes ($5,983,643) and motor fuels ($3,632,440). Spending of $543,613,501 included $152,119,456 for education, $74,821,246 for health, welfare, and safety, and $126,702,470 for highways.

Education.—In the fall of 1962, public elementary schools staffed by 19,966 teachers enrolled 555,183 pupils; secondary schools with 10,273 teachers enrolled 282,610; and (fall of 1961) parochial schools with 685 teachers enrolled 20,225. College enrollment (fall of 1961) totaled 64,579.

Estimated public school spending in the 1961–62 school year totaled $219.35 million, including current expenditures of $179 million ($231 per pupil) and capital outlays of $38 million. Revenue of $227 million was drawn chiefly from state funds ($111 million) and local districts ($67 million). Teachers' salaries averaged $4,013 (high school, $4,298; elementary, $3,863). Actual spending for higher education (1961 fiscal year) amounted to $42,168,000.

Public Assistance.—In the 1962 fiscal year, public assistance payments to a monthly average of 150,908 persons totaled $51,128,581. This amount included $25,232,055 for the aged and $18,576,125 for dependent children.

Transportation and Communications.—With 695 miles of highway construction and reconstruction completed in 1961, *highways and roads* on Dec. 31, 1961, totaled 75,314 miles (71,912 surfaced). These served 1,425,882 *motor vehicles* (as registered during 1961), including 1,160,807 automobiles. Operating in the state were (1961) 27 *railroads* (using 3,442 line miles of track); (1962) 10 regularly scheduled *airlines;* and 34 commercial and municipal *airports and airfields.*

Communications media included (1962) 118 AM and 18 FM *radio stations;* 1 UHF and 16 VHF *television stations;* 30 daily *newspapers* (circulation, 1,250,000) and 142 other newspapers (275,000); and (January 1) 299,800 business and 858,900 residential *telephones.*

Labor Force.—In June 1962, nonagricultural employment totaled 953,800, compared with 934,800 a year earlier and an average of 932,000 for the full year 1961. Of nonfarm employees, 34% were in manufacturing, 20.4% in trade, and 13.2% in service industries. Covered unemployment during 1961 averaged 45,300, compared with 37,000 for 1960.

LEADING TENNESSEE MANUFACTURES, 1960

Industry group	Total employees	Total payroll (in thousands)	Adjusted value added by mfr.[1] (in thousands)
Chemicals and products	39,263	$242,685	$620,545
Food and kindred products	30,802	128,937	311,516
Apparel and related products	46,083	109,098	181,825
Textile mill products	31,004	99,031	167,775
Paper and allied products	9,288	48,503	139,093
Stone, clay, glass products	12,087	54,813	123,363
Electrical machinery	12,753	54,568	123,030
Printing and publishing	12,978	63,779	118,368
Primary metals	11,168	63,432	117,674

[1] For definition, see footnote 1 in the article *Industrial Production.*
(Source: *1960 Annual Survey of Manufactures.*)

Manufacturing.—Covered manufacturing establishments employed an average of 308,852 workers in 1961 and provided a payroll of $1,334,392,996. In 1960 all manufacturing employees numbered 306,579 (including 241,474 in production), received $1,270,525,000 in wages and salaries, and added $2,566,568,000 in adjusted value by manufacture.

Mining.—In 1961, Tennessee ranked 26th among the states in the value of its mineral output, with 0.81% of the national total. It was first in output of pyrites and zinc, and second in phosphate rock. Employment in mineral industries declined 8% during the year.

TENNESSEE MINERAL PRODUCTION, 1961
(In short tons, except as noted)

Mineral	Quantity	Value
Cement:		
Portland (376-lb. bbl.)	8,357,000	$ 26,964,000
Masonry (280-lb. bbl.)	1,018,000	2,753,000
Clays[1]	1,040,000	4,190,000
Coal	5,860,000	20,681,000
Copper (recoverable content of ores)	12,272	7,363,000
Ferroalloys	118,251	18,844,000[2]
Phosphate rock (long tons)	2,235,000	18,675,000
Sand and gravel	6,232,000	8,046,000
Stone	23,940,000	35,906,000
Zinc (recoverable content of ores)	81,734	18,799,000
Other minerals	...	7,337,000
Total	...	$147,262,000[3]

[1] Excludes certain clays, value of which is included in "Other minerals." [2] Values for processed materials are not included in the total. [3] Total adjusted to eliminate duplications in value of clay and limestone, and excludes values for processed minerals. (Source: U.S. Bureau of Mines.)

Agriculture.—Cash farm income for the first nine months of 1962 (excluding government payments) totaled $293,127,000, compared with $284,429,000 for the corresponding period of 1961. For the full year 1961, income comprised $269,423,000 from livestock, $275,226,000 from crops, and $25,681,000 in government payments. Principal income sources in 1961 were cotton lint, $93,050,000; tobacco, $90,453,000; cattle, $89,594,000.

The state's 158,000 farms in 1959 had an acreage of 16,081,000 (4,116,000 in harvested cropland). Livestock on farms on Jan. 1, 1962, included 1,991,000 cattle, 1,269,000 hogs, and 6,462,000 chickens. An average of 188,000 family and 48,000 hired workers engaged in farming in 1961.

TENNESSEE CROP STATISTICS

Crop (and unit of production)	Average 1951–60	1961	Est. 1962
Corn for grain (1,000 bu.)	48,215	45,408	39,401
Cotton lint (1,000 bales)	567	554	560
Cottonseed (1,000 tons)	230	231	234
Soybeans (1,000 bu.)	5,154	10,186	10,418
Strawberries (1,000 lb.)	24,325	26,600	10,560
Tobacco (1,000 lb.)	133,279	145,215	146,575

(Source: U.S. Department of Agriculture.)

Events, 1962.—In the November 6 elections, former Gov. Frank G. Clement, again eligible after being out of office for one term, was elected governor by a clear majority over Republican Hubert Patty and retired Navy Capt. William R. Anderson, an independent Democrat, who had attained fame in 1958 by commanding the nuclear submarine *Nautilus* on its voyage under the polar icecap. Clement had defeated Chattanooga Mayor P. R. Olgiati and Memphis Commissioner William Farris in the Democratic primary in August.

In the legislative election, on the basis of the new apportionment law (see above, *Legislation, 1962*), the Republicans won 21 of the 99 House seats, compared with 19 in 1960, but elected only the same number of senators (6) as in the preceding election.

In a congressional race in the 5th District (Davidson County), incumbent Democrat J. Carlton Loser was badly defeated by his primary election opponent, Richard H. Fulton, as a result of charges of fraudulent use of absentee ballots in that primary. On November 17, a Nashville Councilman and five others were indicted for fraud in connection with the episode. There were also charges of fraud in the use of absentee ballots in Polk County. Republican William Brock won the traditionally Democratic seat in the 3d District. In June, Nashville and Davidson County voters approved the creation of a metropolitan government.

Chattanooga became the last of the four major cities of the state to begin desegregation of its public schools. Following the federal court's rejection in 1961 of its proposed grade-a-year plan, the city adopted a program of integrating the first three grades in the fall of 1962 and all 12 grades by 1968. Hamilton County adopted a similar plan voluntarily.

Federal courts ordered a speeding up of integration programs in Knoxville and Memphis. Considerable progress was made in desegregating schools in several other cities and counties, especially in Lebanon (Wilson County), Jackson (Madison County), and Waverly (Humphreys County). Vanderbilt University, despite an adverse vote of the student body, opened its undergraduate schools to Negroes.

In January, a "tent city" for Negroes allegedly evicted for trying to register and vote was set up in Haywood County, similar to one established earlier in Fayette County. In July, a consent decree was issued by a federal court enjoining landowners from using intimidation for the purpose of interfering with any person's right to vote. The U.S. Civil Rights Commission held a hearing in June in Memphis, which was selected in recognition of its good civil rights record. Twenty-nine eating places in that city had been desegregated in February without incident. Some arrests occurred for "sit-in" demonstrations in Knoxville and Nashville.

The trial of Teamster Union President James R. Hoffa, for violation of the Taft-Hartley Act by allegedly receiving kickbacks of $1,000,000 from a trucking firm, began in Nashville in October. The case ended in a mistrial in December because of a hung jury; charges of jury tampering were being investigated at year's end.

Economically, the upturn of business activity which characterized the last two quarters of 1961 continued throughout 1962. Nonagricultural employment, especially in manufacturing, steadily increased, and unemployment declined correspondingly. Retail sales, especially of automobiles, showed notable gains, as did construction activity, cotton textile manufacturing, and soft coal production. The campaign to attract new industries to Tennessee continued to bear fruit.

TEXAS

A Southwestern state of the United States, Texas ranks second among the states in area (land, 262,840 square miles; inland water, 4,499) and 5th in population (10,116,000 on July 1, 1962, a 5.6% increase from the 1960 census figure of

9,579,677). Urban places with populations above 25,000 in 1960:

Abilene	90,368	Kingsville	25,297
Amarillo	137,969	Laredo	60,678
Arlington	44,775	Longview	40,050
Austin (*capital*)	186,545	Lubbock	128,691
Baytown	28,159	McAllen	32,728
Beaumont	119,175	Mesquite	27,526
Big Springs	31,230	Midland	62,625
Brownsville	48,040	Odessa	80,338
Bryan	27,542	Orange	25,605
Corpus Christi	167,690	Pasadena	58,737
Dallas	679,684	Port Arthur	66,676
Denton	26,844	San Angelo	58,815
El Paso	276,687	San Antonio	587,718
Fort Worth	356,268	Temple	30,419
Galveston	67,175	Texarkana	30,218
Garland	38,501	Texas City	32,065
Grand Prairie	30,386	Tyler	51,230
Harlingen	41,207	Victoria	33,047
Houston	938,219	Waco	97,808
Irving	45,985	Wichita Falls	101,724

Government.—Chief executive and judicial officers in 1962 included Price Daniel (Democrat), governor, serving a two-year term; P. Frank Lake, secretary of state; Jesse James, treasurer; C. H. Cavness, auditor; Will Wilson, attorney general; J. W. Edgar, commissioner of education; and Robert W. Calvert, chief justice of the 9-member Supreme Court, the highest civil judicial court.

The Texas Legislature, which convenes in odd-numbered years, comprised 31 Democrats in the Senate in 1962 and 148 Democrats and 2 Republicans in the House of Representatives.

Finance.—In the 1962 fiscal year, revenue of $2,207,778,793 included $964,241,236 from state taxes and $326,025,809 in county, federal, and other aid funds. Chief tax yields were the 2% limited retail sales tax ($148,660,600) and taxes on gross receipts and production ($212,481,782), motor fuels ($210,642,714), and cigarettes and tobacco ($94,686,951). Spending of $2,120,758,383 included $531,686,608 for education, $224,921,226 for health, sanitation, and public welfare, and $372,190,346 for highways.

Education.—In the fall of 1962, public elementary schools staffed by 52,963 teachers enrolled 1,759,074 pupils; secondary schools with 36,758 teachers enrolled 532,205; and (fall 1961) parochial schools with 4,692 teachers enrolled 137,293. College enrollment (fall 1961) totaled 196,206 in 95 institutions, including 35 junior colleges and 60 senior colleges and universities.

Estimated public school spending in the 1961–62 school year totaled $925.85 million, including current expenditures of $753 million ($381 per pupil) and capital outlays of $120 million. Revenue of $1,026 million was drawn chiefly from state funds ($501 million) and local districts ($370 million). Teachers' salaries averaged $5,205 (high school, $5,330; elementary, $5,125). Actual spending for higher education amounted to $147,685,000.

Public Assistance.—In the 1962 fiscal year, public assistance payments to a monthly average of 316,678 persons totaled $171,489,766. This amount included $144,054,257 for the aged and $18,242,155 for dependent children.

Transportation and Communications.—With 4,028 miles of highway construction and reconstruction completed during 1961, *highways and roads* on Jan. 1, 1962, totaled 198,828 miles (71,597 surfaced). These served 5,097,433 *motor vehicles* (as registered March 31, 1962), including 3,637,946 automobiles. Operating in the state were (1961) 53 *railroads* (using 14,800 line miles of track); (1960) 11 regularly scheduled *airlines;* and (1961) 210 general *airports and airfields.*

Communications media included (1962) 275 AM and 45 FM *radio stations;* 1 UHF and 47 VHF *television stations;* (1961) 117 daily *newspapers* (circulation, 2,907,386) and 561 other newspapers (976,298); and (Jan. 1, 1962) 1,105,900 business and 2,546,400 residential *telephones.*

Labor Force.—The state's labor force on July 15, 1962, included 363,500 agricultural workers. Nonagricultural employment, totaled 3,115,100, compared with 3,070,400 a year earlier and an average of 3,086,100 for the 12 intervening months. Of nonfarm employees, 26.1% were in trade, 19.1% in service industries, and 16.6% in manufacturing. Unemployment on July 15, 1962, stood at 180,000, compared with 217,200 a year earlier.

Manufacturing.—Covered manufacturing engaged an average of 470,884 workers in 1962. In 1960 all manufacturing employees numbered 484,262, including 344,622 in production; salaries and wages totaled $2,453,419,000; and adjusted value added by manufacture amounted to $5,775,336,000.

LEADING TEXAS MANUFACTURES, 1960

Industry group	Total employees	Total payroll	Adjusted value added by mfr.[1] (in thousands)
Chemicals and products	40,022	$276,800	$1,343,343
Food and kindred products	78,327	316,992	805,896
Petroleum and coal products	39,029	270,727	696,529
Transportation equipment	51,227	319,154	545,152
Nonelectrical machinery	39,984	217,692	437,516
Primary metals	25,523	143,538	335,736
Fabricated metals	28,699	142,217	256,640
Stone, clay, glass products	22,807	100,001	240,309
Printing and publishing	27,347	129,153	235,908
Electrical machinery	17,412	93,773	196,809

[1] For definition, see footnote 1 in the article *Industrial Production.* (Source: *1960 Annual Survey of Manufactures.*)

Mining.—In 1961, Texas ranked first among the states in the value of mineral output, with 23.30% of the national total. Of the total value, mineral fuels provided over 93%. Texas was first in output of asphalt, graphite, magnesium chloride, natural gas, natural gas liquids, petroleum, and sulfur (Frasch); second in bromine, clays, helium, salt, sodium sulfate, and stone; third in cement; and fourth in gypsum, talc, soapstone, and pyrophyllite.

TEXAS MINERAL PRODUCTION, 1961
(In short tons, except as noted)

Mineral	Quantity	Value
Cement:		
Portland (376-lb. bbl.)	25,101,000	$ 80,808,000
Masonry (280-lb. bbl.)	851,000	2,529,000
Clays[1]	3,786,000	5,737,000
Gypsum	1,074,000	3,846,000
Helium (1,000 cu. ft.)	173,066	3,196,000
Lime	880,000	9,736,000
Natural gas (1,000 cu. ft.)	5,963,605,000	733,523,000
Natural gasoline (1,000 gal.)	3,111,427	214,279,000
Petroleum (bbl.)	938,017,000[2]	2,787,925,000[2]
Petroleum gases (1,000 gal.)	4,768,222	185,558,000
Salt, common	4,695,000	17,682,000
Sand and gravel	27,398,000	30,691,000
Stone	38,316,000	45,874,000
Sulfur, Frasch (long tons)	2,730,000	62,720,000
Other minerals	...	51,449,000
Total	...	$4,224,909,000[3]

[1] Excludes certain clays, value of which is included in "Other minerals." [2] Preliminary. [3] Total adjusted to eliminate duplication in the value of clays and stone. (Source: U.S. Bureau of Mines.)

Agriculture.—Cash farm income for the first nine months of 1962 (excluding government payments) totaled $1,582,278,000, compared with $1,444,812,000 for the corresponding period of 1961. For the full year 1961 income comprised $1,053,751,000 from livestock, $1,342,694,000 from crops, and $133,870,000 in government payments. Principal income sources in 1961 were cattle, $646,209,000; cotton lint, $644,270,000; sorghum grain, $206,630,000; wholesale milk, $134,937,000; and wheat, $125,325,000.

The state's 227,000 farms in 1959 had an acreage of 143,218,000 (22,236,000 in harvested cropland). Livestock on farms on Jan. 1, 1962, included 9,660,000 cattle, 996,000 hogs, 5,832,000 sheep, and 15,874,000 chickens, and (1961) 123,-

TEXAS CROP STATISTICS

Crop (and unit of production)	Average 1951–60	1961	Est. 1962
Carrots (1,000 cwt.)	3,786[1]	4,312	4,290
Corn for grain (1,000 bu.)	35,558	31,890	32,612
Cotton lint (1,000 bales)	4,050	4,786	4,680
Cottonseed (1,000 tons)	1,698	2,039	1,981
Flaxseed (1,000 bu.)	485	1,610	188
Grapefruit (1,000 boxes)	2,900	2,700	200
Oranges (1,000 boxes)	1,740	2,300	80
Peanuts (1,000 lb.)	162,238	224,960	224,750
Pecans (1,000 lb.)	31,470	20,000	12,000
Rice (1,000 bags)	13,456	11,861	15,801
Sorghum grain (1,000 bu.)	160,532	229,635	201,006
Wheat (1,000 bu.)	38,874	84,870	43,696

WIDE WORLD

John Connally and his wife, Nellie, rejoice as returns on November 6 show Connally ahead in Texas gubernatorial race.

043,000 broilers. An average of 250,000 family and 194,000 hired workers engaged in farming during 1961.

Events, 1962.—State political developments during the year centered around the gubernatorial race. The first primary on May 5 found a six-man field contesting for the Democratic nomination. Opposing Gov. Price Daniel, who sought a fourth term, were John B. Connally, Jr., former secretary of the Navy and close associate of Vice President Johnson; Don Yarborough, a Houston attorney with liberal and labor support; Will Wilson, state attorney general; Marshall Formby, Plainview radio-station owner; and former Maj. Gen. Edwin A. Walker, candidate of the extreme right.

In the balloting, Connally led the field by polling about 30 percent of the total vote. In what most observers regarded as a mild upset, Yarborough (not related to U.S. Sen. Ralph Yarborough) edged out Governor Daniel for second place and the right to oppose Connally in a runoff. Also in the May primary, Jack Cox, erstwhile Democrat, scored an easy victory over Roy Whittenburg to gain the Republican nomination for governor.

The runoff contest between Connally and Yarborough on June 2 was surprisingly close. Connally won with about 51 percent of a total vote that exceeded 1.1 million. An influential factor in Yarborough's strong race was believed to have been his effective use of Connally's refusal to engage in pre-election debates.

The fall campaign between Connally and Cox was extremely hard-fought and occasionally marked by bitter exchanges. In the November election, Cox failed in his bid to become the first Republican governor of Texas since Reconstruction days, but he did gain about 45 percent of the total vote. Despite a spirited campaign effort, Texas Republicans failed to win a single statewide office, and their goal of a two-party state was yet to be achieved.

Bruce Alger of Dallas, the only incumbent Republican representative from Texas, won reelection in the 5th District and was joined in the House by another Republican, Ed Foreman, who defeated Democratic Rep. J. T. Rutherford in the 16th District. Republican strength was particularly notable in Dallas, where six of the party's seven members of the state Legislature were elected.

Two unrelated scandals made headline news during the year. The first was the nationally celebrated case of Billy Sol Estes, West Texas promoter, whose $22 million financial empire collapsed in April when a federal grand jury indicted him on 57 acts of fraud. Estes' complex financial maneuverings resulted in charges of illegal transfer of federal cotton acreage allotments, attempts to gain a monopoly in the liquid fertilizer market in West Texas, and illegality in securing contracts for federal grain storage. Estes was also accused of defrauding 12 finance companies by issuing mortgages on nonexistent fertilizer storage tanks, this in order to build up his grain stores. Some Department of Agriculture officials and independent business concerns also were involved in the Estes case.

On November 7, a state jury in Tyler found Estes guilty on a charge of swindling and sentenced him to eight years in state prison. (He remained free on bond pending an appeal.) He also was scheduled to stand trial on a variety of federal charges in the spring of 1963.

The second scandal, involving independent oil operators and state officials, resulted from discovery of the practice of slant-well drilling in East Texas oilfields. Oil from an adjacent producing well would be siphoned off after drilling in at an angle, sometimes in excess of 50 degrees. Texas law calls for no more than a 3-degree deviation except in certain special cases. Numerous trials on charges growing out of a state investigation in the fall were expected during 1963.

Economic activity in the state rose moderately during the year, but production of crude petroleum remained at severely restricted levels. The typical number of allowable producing days was only eight per month, continuing a pattern set in 1960 which has found Texas making the major adjustment of petroleum supply to nationwide market demand. In December, the basis for production regulation was changed from days-per-month to percentage-of-total-allowable. While a minor step, this provided slightly greater flexibility in setting production.

On September 28, President Kennedy signed a bill establishing Padre Island National Seashore Park, an 80.5-mile strip of beach off the lower Texas Gulf coast.

Rice University.

TEXTILE INDUSTRY

United States consumption of cotton, wool, silk, and the man-made fibers in 1961 totaled 6,509 million pounds, 1% above the 1960 total. The annual rate of consumption of these fibers during the first half of 1962 was 7,186 million pounds, 10% more than in 1961. The 1962 annual rate of raw cotton consumption, based on data for the first half of the year, was 4,438 million pounds, 8% more than the actual 1961 consumption. Wool usage in 1962, on the same basis, was 436 million pounds, 6½% greater than in 1961, while silk consumption, 6 million pounds, continued at the same low rate as in recent years.

Man-made fiber consumption during the January–June 1962 period was at an annual rate of 2,306 million pounds, 16% above the actual 1961 figure. The following figures are the 1961 actual and the 1962 annual rate of consumption, respectively, both in millions of pounds, and the percentage change from 1961 to 1962: rayon and acetate yarn for "textile" uses, 405 and 452 (+12%); rayon yarn for tires and related uses, 223 and 236 (+6%); rayon and acetate staple + tow, 499 and 556 (+11%); noncellulosic man-made fiber, 706 and 872 (+24%); and textile glass fiber, 147 and 190 (+29%).

Cotton retained its position as the most important textile fiber in pounds consumed, accounting for 62% of the total fiber used in the first half of 1962, as compared with 63% in the full year 1961. Consumption of raw wool represented 6% of the total in 1962, the same as in 1961; and man-made fibers, 32%, which compares with 31% in 1961.

SELECTED U.S. TEXTILE STATISTICS

	Year 1959	Year 1960	Year 1961	1st half 1962
Fiber Consumption:	(Millions of pounds)			
Raw Cotton	4,336	4,196	4,113	2,219
Raw Wool, total[1]	431	407	410	218
Apparel class	263	244	263	146
Carpet class	168	163	147	72
Raw silk	6	6	6	3
Man-made fibers[2]	1,994	1,818	1,980	1,153
Rayon + acetate yarn	723	625	628	344
Rayon + acetate staple	530	431	499	278
Noncellulosic fibers[3]	590	614	706	436
Textile glass fiber	151	148	147	95
Total fibers	6,767	6,427	6,509	3,593
Tire Cord and Fabric:[4]				
Cotton	4	3	3	2
Nylon	124	139	149	92
Rayon	297	240	213	110
Total tire cord and fabric	425	382	365	204
Broad Woven Fabric Output:[5]	(Millions of linear yards)			
Cotton fabrics	9,603	9,365	9,168	4,860
Man-made fiber fabrics[6]	2,500	2,404	2,408	1,333
Woolen and worsted fabrics[7]	311	286	287	158
Total broad woven goods	12,414	12,055	11,863	6,321

[1] Scoured basis. [2] U.S. producers' domestic shipments plus imports for consumption. [3] Includes acrylic, modacrylic, nylon, nytril (dinitrile), olefin (polyethylene and polypropylene), spandex, vinal (polyvinyl alcohol), vinyon (polyvinyl acetate), and TFE-fluorocarbon fiber. [4] Excluding chafer fabric. [5] Except tire fabric. [6] Including a nominal yardage of silk fabrics. [7] Excluding carpets, rugs and felts.

Broad Woven Goods Production.—Production of broad woven goods in the United States during the first half of 1962 was at an annual rate of 12,642 million linear yards, 7% greater than 1961. The annual rate of cotton goods output was 9,720 million yards, up 6% from 1961.

The 1962 rate of man-made fiber production (including a small yardage of silk goods), at 2,666 million linear yards, was 11% above the 1961 level; woolen and worsted fabric production was 316 million yards, 10% above the 1961 actual production.

Tire Cord and Fabric Production.—Based on data for the first half year, the 1962 annual rate of tire cord and fabric production was 408 million pounds, or 12% more than in 1961. Nylon continued to increase in importance, comprising 45% of the 1962 production (41% in 1961).

Prices.—Compared with 1961, most textile fiber prices rose slightly in the first nine months of 1962. For example, the average price of 1-inch middling raw cotton for that period was 33.7 cents a pound, or 1.4 cents above the 1961 annual average, while the 1962 nine-month average price of raw wool (scoured basis at Boston) was $1.23 a pound, 5 cents higher than the 1961 average.

Employment and Weekly Earnings.—Employment in United States knitting and weaving mills, as well as in the manufacture of apparel and other finished textile products, averaged 1,884,000 persons during the first half of 1962, slightly above the 1,860,000 average of 1961 but below the 1960 employment of 1,921,000 persons.

The average weekly gross earnings of textile mill product employees during the first half of 1962 was $68.11, compared with $65.04 in 1961 and $63.60 in 1960. For the apparel cutting and related trades, the average weekly wages for the first half of 1962 were $60.28 ($57.70 in 1961 and $56.45 in 1960).

Imports and Exports.—The United States traditionally has been a net exporter of textile fibers and manufactures. The large export balance of raw cotton, cotton textiles, noncellulosic man-made fibers, and man-made fiber textile products is usually offset, but to a lesser degree, by substantial imports of raw wool, wool textiles, and man-made fiber staple. An export balance of $461 million was realized in 1960, and of $403 million in 1961. In the first six months of 1962, an import balance again appeared, at an annual rate of $86 million. This total is composed of projected imports of $1,366 million and exports of $1,280 million.

Per-Capita Fiber Consumption.—Civilian per-capita consumption of cotton, wool, and the man-made fibers in the United States was 35.8 pounds in 1961, one-half pound less than in 1960. Wool usage decreased by 0.1 pound to reach a level of 2.9 pounds per person in 1961. Cotton consumption was 22.2 pounds, 1.2 pounds less than in 1960.

Man-made fiber consumption, on the other hand, increased 0.8 pounds to 10.7 pounds per capita in 1961. These per-capita data are based on the mill consumption of the fibers, minus exports and plus imports of fabricated products, divided by the civilian population.

Flax and Linen.—Since very little flax is grown in the United States for textile fiber purposes, practically all of the raw flax and linen fabrics and most linen finished goods are imported. In 1961, imports of raw flax and flax yarns totaled 8.1 million pounds, compared with 6.6 million pounds in 1960. Imports of linen and chiefly-linen fabrics totaled 17 million pounds in 1961, compared with 17.4 million pounds in 1960. Imports of the principal linen manufactures in 1961 included 1,753 thousand dozen handkerchiefs (down 12% from 1960), 190 thousand dozen towels (down 10%), and 434 thousand dozen napkins (down 3%).

Canadian Textile Developments.—Increased output by the Canadian textile manufacturing industry was recorded in 1961. Shipments of cotton fabrics, 356 million yards, were 45 million yards, or 14%, higher than in 1960; wool fabric (excluding military cloth) production was 21 million yards, 6% higher than in 1960; and man-made fiber fabric shipments were 105 million yards, 12% higher than in 1960.

The output of rayon and acetate yarn and staple in 1961, however, was 73.2 million pounds, 2.1 million pounds lower than in 1960. Noncellulosic fiber production was 43.6 million pounds in 1961, or 6.4 million pounds higher than in 1960.

Employment in the Canadian textile industry in 1961 totaled 73,300 persons: 14,900 in the man-made fiber yarn and fabric industries, 11,900 in wool, 18,100 in cotton, 19,300 in knit goods, and 9,100 in other segments of the industry.

After a steady decline through 1957, the Canadian mills' share of the domestic fabric market increased to 54% in 1960 and to 59% in 1961. Within these 1960 and 1961 totals respectively, Canadian-made cotton fabrics increased from 48% to 50% of that market, wool from 56% to 59%, and the man-made fiber fabrics from 69% to 73%.

(For further information see the Index entry, *Textile Industry.*)

STANLEY B. HUNT,
President, Textile Economics Bureau, Inc.

THAILAND

Thailand (formerly Siam) is a kingdom in Southeast Asia. It has an area of approximately 198,500 square miles, consisting largely of forest. The population is 27.2 million (mid-1961 est.), including more than 3 million Chinese, and is increasing at a rate of 3% per year. The metropolitan area of Bangkok, the capital and largest city, has a population of 2,370,000. The language is Thai.

Government.—Thailand is a kingdom, and the present monarch is Bhumibol Adulyadej (phonetic spelling, Phumiphon Adundet), who has ruled since 1950. Field Marshal Sarit Thanarat is the nation's strongman, with almost unlimited power. The constitution of 1932 was abrogated in 1958, and a new constitution was in preparation in 1962. There is a provisional 12-man cabinet and a 240-member interim legislative assembly. Thailand is a signatory of the Southeast Asia Treaty Organization (SEATO).

Education and Religion.—School enrollment, 1960: preschool, 38,830; primary, 3,935,152; secondary, 301,960; higher (including universities), 49,956; special, 65,693. The annual increase in teachers is 2–3%; in students, 6–10%. Expenditures on education account for 16.5% of the national budget (in 1962, 1,468,425,000 bahts). A new national education act was put into effect on April 1, 1961. About 95% of the population is Buddhist.

Finance.—Government revenue, 1961: 7,773 million bahts (6,778 million in 1960; 1 baht equals U.S.$0.48); expenditure, 7,748 million (6,720 million). Gold and foreign exchange holdings: $421.3 million as of January 1962. Money supply: $535.5 million as of January 1962 (up 12% from 1960).

Transportation and Communications.—Transport networks: railway trackage, 2,096 miles (1962); railway passengers, 39,707,000, freight, 4,109,000 tons (1961); state highways, 4,500 miles (1962); provincial highways, 1,020 miles (1962). A well developed inland waterway system exists, and there is an airline with 12 aircraft. Passenger cars: 40,700 (1959); commercial vehicles, 47,000 (1959); telephones, 42,683 (1960); radio receivers, 163,000 (1960); television sets, 100,000 (1962).

Economic Indicators.—Gross national product: $2.53 billion (1961). Index of agricultural production (1952–57 = 100): 112 in 1959–60. Cost of living index (1958 = 100): 106 in June 1962 (102 in 1961).

Manufactures and Minerals.—Thailand has little manufacturing. There is a rich mineral potential, but production is small. Chief products (metric tons, 1961): lignite, 100,000; cement, 646,800; electric power, 441.6 million kw.-hr. The Thai Board of Investment has proved active in promoting industrialization and mineral exploitation.

Agriculture.—Agriculture engages 84% of the labor force. Chief crops (metric tons, 1961): crude rice, 7.9 million; corn, 700,000; kenaf (a fiber plant), 200,000; rubber, 15,400. Other products are sugarcane, kapok, and teakwood.

Foreign Trade.—Total exports, 1961: 10,011 million bahts (8,614 million in 1960); imports, 10,191 million (9,560 million). Principal exports (in million bahts, 1961): rice, 3,613 (2,581 in 1960); rubber, 2,130 (2,579). Other exports: corn products, tapioca, kenaf, tin, and teak. Chief customers (with percentage of total Thai exports received, 1961): Japan (13%); Malaya (13%); Indonesia (10%); Singapore (9%); Hong Kong (9%); United States (7%). Principal suppliers (with percentage of total imports provided, 1961): Japan (29%); United States (15%); United Kingdom (9%); West Germany (7%); Singapore (6%).

Events, 1962.—The Communist build-up in Laos began to prove a real threat to the security of Thailand in the spring. In March, United States military advisers began training Thai army units in counter-guerrilla warfare in anticipation of a possible Communist drive against Thailand in the future. In early May, pro-Communist Pathet Lao troops drove 2,000 royal Laotian troops from northern Laos into Thailand. On May 12, President Kennedy ordered a carrier task force of the Seventh Fleet into the Gulf of Siam as a precautionary measure; the task force carried an 1,800-man Marine combat battalion. On May 15, on Thailand's request, the president ordered a full deployment of 5,000 troops—including 1,000 already there on SEATO maneuvers, the Marine battalion, and a 1,200-man Army battle group—into Thailand. Several other members of SEATO also gave military assistance. In the absence of further aggressive moves by the Pathet Lao forces, the Marines were withdrawn in July and August, and 2,300 Army infantrymen departed in late November and early December.

U.S. Marines pile their equipment on dock in Bangkok Harbor, May 17, as they arrive to bolster Thailand defenses. The last contingent of Marines was withdrawn on August 4.

WIDE WORLD

The president's actions in the spring were taken in accordance with United States commitments to the security of Thailand. However, Thailand's resentment of later American military aid to Cambodia resulted in strained relations between Thailand and the United States. In September there were suggestions in Bangkok that the Thai government would begin to follow a Thailand-first foreign policy and would cultivate closer relations with the Afro-Asian nations.

Thai-Cambodian relations were volatile during 1962. Diplomatic relations, having been broken in the fall of 1961, remained severed. Resentment over American military aid to Cambodia was aggravated by the role of the United States in the dispute over the ownership of the Temple of Preah Vihear, a 12th century Brahmin temple on the Thai-Cambodian border. In 1959, Cambodia brought the question to the International Court of Justice, where Cambodia's case was presented by former U.S. Secretary of State Dean Acheson. In June 1962 the court ruled 9 to 3 that the temple belonged to Cambodia. The decision was accepted with great reluctance by the Thai government. In reaction against United States support of Cambodia on this issue, Thailand boycotted all SEATO meetings from June 19 to July 18.

The first direct rail connection between Thailand and Malaya was opened on April 22. It represented the first project of the Association of Southeast Asia (composed of Thailand, Malaya, and the Philippines), whose purpose is to coordinate more closely the economic programs of the member states.

The leader of Thailand's Buddhist hierarchy, Somdej Pra Ariyawongsakhatayana, died on June 17 at the age of 74.

On October 27, tropical storm Harriet swept the southern provinces of Thailand, killing 769 persons and severely injuring 252. The missing were estimated at 142 and damages at nearly $19 million.

University of Texas.

THANT, U

Burmese diplomat; secretary general of the United Nations: b. Pantanaw, Burma, Jan. 22, 1909.

Having served since Nov. 3, 1961, as acting secretary general of the United Nations to fill the unexpired term of the late Dag Hammarskjöld, U Thant was appointed secretary general on Nov. 30, 1962, for a term of office expiring in 1966.

Educated at the University College, Rangoon, Thant became a teacher and eventually headmaster of the National High School in Pantanaw. In 1947 he entered government service in the press department, and in the following year he became head of radio broadcasting. He was the trusted adviser to premiers U Nu and U Ba Swe at several international conferences.

In 1957 he was appointed permanent representative of Burma to the United Nations, and as such he headed his country's delegation at the 12th to 16th sessions of the General Assembly. In 1961 he served as chairman of the

UN Congo Counciliation Commission, and of the UN Capital Development Fund Committee.

On assuming the office of acting secretary general in November 1961, Thant proceeded to tackle the pressing Congo situation. He found no easy solution, however, to the problem which resulted in the death of his predecessor. In July 1962, Thant suggested using economic pressure to compel the secessionists of Katanga Province to accept the authority of the Congolese central government. By this time the United Nations Congo forces were costing some $10 million monthly. It was through Thant's plan to employ military force that the province was eventually brought under the control of Léopoldville in January 1963. (See also CONGO, REPUBLIC OF THE.)

As a result of the financial burdens incurred by the Congo operation, the United Nations was on the verge of bankruptcy when Thant took office. At his suggestion, the UN General Assembly authorized the issuance of $200 million in 25-year bonds and averted a serious financial crisis.

Thant also played an important part in the successful Dutch-Indonesian negotiations concerning West New Guinea. Agreement between the two parties was signed in his presence on Aug. 15, 1962. (See also INDONESIA; NETHERLANDS; WEST NEW GUINEA.)

In 1962, Thant made three official visits abroad. In May he made a trip to Denmark, Sweden, and Switzerland; in July he visited the United Kingdom, Norway, Switzerland, Ireland, France, and Finland; and in August and September he went to the Soviet Union, Poland, Czechoslovakia, and Austria. While in the Soviet Union, he conferred with Premier Khrushchev in Yalta.

At the height of the Cuban crisis in October, Thant attempted to break the impasse by suggesting a two-to-three-week suspension of operations by both sides. After the Soviet Union had agreed to remove offensive weapons from the island and to allow international verification of removal operations, Thant went to Havana (October 30–31) at the invitation of the Cuban government. He reported later that he had been reliably informed that the missiles were being dismantled. (See also CUBA.)

In May, Thant suffered a personal tragedy when his only son died in an accident in Rangoon.

UPI

U Thant, elected United Nations secretary general on November 30, poses with his wife (center) and daughter, Mrs. Tyn Myint. He had been acting secretary general 13 months.

THEATER

The year 1962 was most conspicuous for the double record of *My Fair Lady*. On September 29, when its New York run finally ended with the staggering total of 2,717 performances, it had become the longest-running musical in Broadway's history. In London, also, it established a record; for on January 10, with 1,544 performances at the Drury Lane, it outdistanced *Oklahoma!* as the all-time record holder for American musicals in England.

For the English, however, the real record was made on July 3 when, after a generation of active debate and over 100 years of discussion, the plans for the National Theatre were finally approved by the House of Commons. Though the withdrawal early in the year of the Royal Shakespeare Theatre Company from the planning group threatened for a time to jeopardize the National Theatre, the naming on August 9 of Sir Laurence Olivier as artistic director seemed, even to its most hostile critics, to certify a 1965—possibly even a target-date 1964—opening of the two authorized buildings, an opera house and a theater-in-the-round auditorium.

Festivals.—The accelerating worldwide movement away from individual productions and toward festival or repertory productions of groups of plays became strikingly evident in 1962. Paris, for instance, drew from 23 countries 112 productions of drama, dance, and opera to its Theater of the Nations festival. Opening on March 27, World Theater Day, the festival in its three months of activity presented an extraordinarily wide range of productions: from the Greek National Theater's *The Phoenicians* of Euripides to the New York Living Theatre's production of Jack Gelber's controversial *The Apple;* from the Dublin Theatre Festival's production of *The Voice of Shem* (an adaptation of Joyce's *Finnegans Wake*) to the Maly Theater of Moscow's production of Tolstoy's *The Power of Darkness.*

Festival activity was, however, to be seen everywhere. In Spoleto, at Italy's Festival of Two Worlds, the premiere of Tennessee Williams' new play, *The Milk Train Doesn't Stop Here Anymore,* was both a critical and a popular success. And in Greece, at the Festival of Epidaurus, for the eighth successive season, 14,000 persons were in attendance for the opening production—in 1962 a breathtakingly effective version of Euripides' *Bacchae.* Here, in a 2,300-year-old theater world-famous for its perfect acoustics, on ten consecutive weekends the Greek classics were vividly alive.

The British Isles' two principal festivals—those in Dublin, where Eugene O'Neill's *Long Day's Journey into Night* was of most interest, and in Edinburgh, where *Curtmantle,* Christopher Fry's first new play in eight years, opened to decidedly mixed reviews—were joined by a third, this one in England itself. Under the artistic direction of Sir Laurence Olivier, the newly built arena theater of the Chichester Festival opened a season that drew on such seldom-performed plays as John Ford's *The Broken Heart* and the Duke of Buckingham's adaptation of Beaumont and Fletcher's *The Chances.*

Shakespeare.—The principal festival business is, of course, that devoted to Shakespeare. And Shakespeare festivals could be found all over the English-speaking world. (At the Montreal Festival, in fact, a French-Canadian *Richard II* proved the hit of the summer.)

In the parent Shakespeare festival, that at Stratford-on-Avon, England, an excellent *Measure for Measure* under John Blatchley's direction balanced out a weak *Macbeth* and a mediocre *Cymbeline;* while in London's Regent's Park Shake-

speare Festival, a lovely *Midsummer Night's Dream* proved the principal attraction of its 30th season.

The most satisfying Shakespeare festival, however, was neither parent nor London offspring, but rather the brilliant one which played nightly to the 2,249 spectators who jammed the new Delacorte Theater in New York's Central Park. Charging no admission, Joseph Papp's precariously financed festival earned uniform critical praise for Gerald Freedman's fine production of *The Tempest*, a production dominated by Paul Stevens' imposing Prospero; an elegent *Merchant of Venice*, described by Arthur Gelb of the New York *Times* as "stylish, opulent, and beautifully acted"; and an altogether memorable production of *King Lear* under Mr. Papp's direction, unorthodox yet satisfying in Frank Silvera's crusty, human Lear who rises in the course of the play from senile fool to eloquent, low-keyed, tragic wise man.

Of the eight other Shakespeare festivals in North America, that in Stratford, Ontario, was artistically most successful. Perhaps for economic reasons (it had begun the season with an indebtedness of nearly $500,000), it offered—in addition to an elemental *Macbeth*, a graceful *Tempest*, and a lively *taming of the Shrew*—popular and well-attended versions of Rostand's *Cyrano de Bergerac* and Gilbert and Sullivan's *The Gondoliers*.

At Stratford, Conn., on the other hand, only two full-length plays were attempted: a good *Henry IV, Part I*, intelligently directed by Douglas Seale; and a disorganized, careless production of *Richard II*—evidence, many theater historians felt, of the artistic confusion which lies behind the prosperous but fumbling company.

Theater Trends.—Though there was no significant increase in the 150 professional summer stock companies in the United States, both professional and amateur community theaters were booming, the newest one an ambitious venture backed by the University of Michigan—the first professional theater company in America entirely sponsored by university funds. Bus and truck touring companies also were on the increase, many of them bringing the "road"—for the first time in years—to small towns and to university theaters. Jean de Rigault's Le Tréteau de Paris, for instance, played coast-to-coast a French-language double bill of Sartre's *No Exit* and Ionesco's *The Bald Soprano*, all of the performances in college theaters.

The big theaters, on the other hand, seemed very nearly doomed, only the McVickers Theater in Chicago bucking the trend by serving for the first time since 1914 as a legitimate house. Offering a variety of solutions to the building problem, a foundation-backed set of models for eight "ideal" theaters was displayed in New York's Museum of Contemporary Crafts. Designed by such men as Jo Mielziner and Frederick J. Kiesler, some of the models offered facilities for multiple use or allowed the director maximum flexibility of staging.

None of the "ideal" theaters seems likely to materialize in the near future. Yet something of the demand for theater can be seen reflected in 1962's vastly expanded distribution of paperback editions of plays and in the growing sales of long-playing records of full-length dramatic productions. One way in which this huge potential audience may be satisfied was suggested in the extraordinarily successful CBS television broadcast on June 21 of Joseph Papp's production of *The Merchant of Venice*, which, uninterrupted by commercials, was seen by an estimated audience of 1,600,000 persons. Another television solution was explored on March 28 in a closed-circuit experiment: A regular performance of Paddy Chayefsky's *Gideon* was picked up from the back rows of the Plymouth Theater in New York and simultaneously viewed by a Rochester audience of 2,500 customers who, assembled in a theater, watched the performance on a 20-by-15-foot screen.

London.—If festivals boomed, the road revived, and television experiments seemed to pay off, the theater languished both in New York and in London. London's "experimental" Arts Theater seemed doomed to lose its lease, in spite of the fiercely debated "Theater of Cruelty" productions—the best of them David Rudkin's *Afore Night Come*—brought to it by its enterprising artistic director, Peter Hall. And in the regular London season, only Arnold Wesker's *Chips with Everything*, an allegorical account of life in a Royal Air Force recruit station, seemed to be of more than passing interest.

Broadway.—Some indication of the nature of the Broadway scene can be suggested by a set of very simple statistics. On June 1, of the entire group of plays to open between January 1 and the end of May, only five productions—four musicals and a single drama—had survived. Among these, Richard Rodgers' *No Strings* was visually and musically exciting, but it suffered from an empty book; *A Funny Thing Happened on the Way to the Forum*, the best of the lot, really was funny, but it depended almost entirely on the performance of Zero Mostel; and the others—*I Can Get It for You Wholesale*, *Bravo Giovanni*, and the comedy-drama *A Thousand Clowns*—were, though entertaining, in no way really memorable.

There had, of course, been interesting things to see. The City Center had imported the Old

Highlights of the 1961–62 Broadway season. (*Left*) Anthony Quinn and Margaret Leighton in *Tchin-Tchin*. (*Center*) Sid Caesar, who played seven roles in *Little Me*. (*Right*) Jason Robards, Jr., and Barry Gordon in the comedy *A Thousand Clowns*.

(CENTER) FRIEDMAN-ABELES

(*Left*) Diahann Carroll and Richard Kiley starred in the musical hit *No Strings*. (*Right*) The English comedy revue *Beyond the Fringe* featured Dudley Moore, Peter Cook, Jonathan Miller, and Allan Bennett in satirical sketches.

Vic's blazingly brilliant *Romeo and Juliet*, which, under Franco Zeffirelli's direction, glowed with youth and vitality. The Royal Dramatic Theater of Sweden, stopping off for a week on the way to the Seattle World's Fair, showed how powerful Eugene O'Neill's *Long Day's Journey into Night* could be in a Swedish-language production, and showed as well how exciting 60-year-old Inga Tidblad, the star of the group, could be playing the 25-year-old heroine of Strindberg's *Miss Julie*. But a host of adaptations—*The Aspern Papers, A Passage to India, A Gift of Time, Something About a Soldier*—proved, like *The Affair* in the autumn, that complex novels are sometimes more interesting than well-made plays adapted from them.

Autumn also had its share of disappointments, particularly in the work of established playwrights and composers. Irving Berlin's *Mr. President* was unimpressive; S. N. Behrman's *Lord Pengo* was bland; Garson Kanin's *Come on Strong* seemed to most critics simply awkward; and Sidney Kingsley's *Night Life* was embarrassing.

For compensation, however, there was the fine acting of Margaret Leighton in *Tchin-Tchin;* the biting satire of Alan Bennett, Peter Cook, Jonathan Miller, and Dudley Moore in *Beyond the Fringe;* a lovely dance-drama—*The Beautiful Bait* —delicately performed by the extraordinarily talented children of the Foo Hsing Theater of Nationalist China; and one solid hit, Edward Albee's fierce, exhausting account of two couples' dawn-to-dusk drunken dismemberment of one another, *Who's Afraid of Virginia Woolf?* The D'Oyly Carte Gilbert and Sullivan company at New York's City Center left nothing to be desired; Orson Wells' *Moby Dick*, despite its brief run, was jammed with theatrical excitement; Bert Lahr in S. J. Perelman's *The Beauty Part* was—in five parts—extravagantly Bert Lahr. Preview performances of *Oliver!*, the long-awaited English musical, brought the year to a lilting close, although the official opening of the show was postponed (because of the New York newspaper strike, and therefore the absence of reviews) until Jan. 6, 1963.

Off-Broadway.—Though not quite so lively as in earlier years, off-Broadway productions included the illuminating *Brecht on Brecht;* Arthur Kopit's *Oh Dad, Poor Dad, Mamma's Hung You in the Closet and I'm Feelin' So Sad*, an ingenious comedy-drama which baffled some critics and excited others; a first-rate *Rosmersholm* as the third production of David Ross' Ibsen cycle; a return engagement of Dylan Thomas' lyrical celebration of life in Wales, *Under Milk Wood;* and—perhaps the most significant dramatic event of the year—Thornton Wilder's *Plays for Bleecker Street*. These short plays, the first two sections of his cycle *The Seven Ages of Man* and the fourth section of *The Seven Deadly Sins*, reminded those who were fortunate enough to see them that a very great dramatist is alive in our time.

(For a list of major theater prizes, see PRIZES AND AWARDS; for other references to the theater, see the Index entry *Theater.*)

BROADWAY OPENINGS AND CLOSINGS IN 1962

(Where only the opening date is given, the production was continuing at the end of the year.)

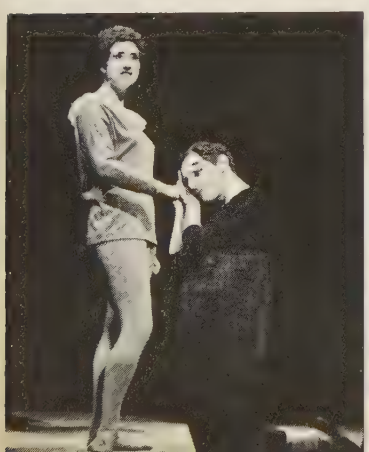
BROADWAY OPENINGS

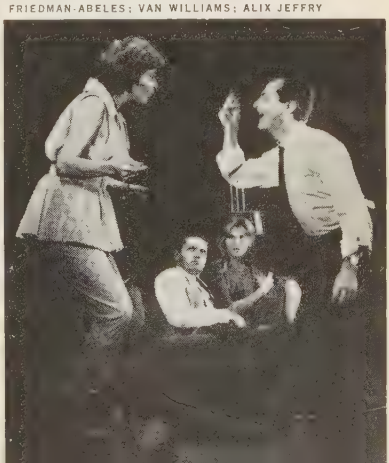
The Affair, a play by Ronald Miller, based on the novel by C. P. Snow; with Brewster Mason, Donald Moffat, Keith Baxter, and Brenda Vaccaro; September 20–December 29.

All American, a musical based on Robert Lewis Taylor's novel *Professor Fodorski;* with book by Mel Brooks, music by Charles Strouse, and lyrics by Les Adams; with Ray Bolger, Eileen Herlie, and Fritz Weaver; March 19–May 26.

(*Left*) Imported from England, the musical *Stop the World, I Want to Get Off* starred Anna Quayle and Anthony Newley. (*Center*) Brian Davies, Preshy Marker, and Zero Mostel had top roles in the comedy hit *A Funny Thing Happened on the Way to the Forum*. (*Right*) Uta Hagen, Arthur Hill, Melinda Dillon, and George Grizzard in *Who's Afraid of Virginia Woolf*.

FRIEDMAN-ABELES; VAN WILLIAMS; ALIX JEFFRY





The Aspern Papers, a play by Michael Redgrave, based on the novel by Henry James; with Wendy Hiller, Françoise Rosay, and Maurice Evans; February 7–April 28.
The Beauty Part, a comedy by S. J. Perelman; with Bert Lahr, Alice Ghostley, and Charlotte Rae; December 26.
Beyond the Fringe, a revue written and acted by Alan Bennett, Peter Cook, Jonathan Miller, and Dudley Moore; October 27.
Bravo Giovanni, a musical based on Howard Shaw's novel *The Crime of Giovanni Venturi;* with book by A. J. Russell, lyrics by Ronny Graham, and music by Milton Schafer; with Cesare Siepi, George S. Irving, Michele Lee, David Opatoshu, and Maria Karnilova; May 19–September 15.
Brigadoon, a revival of the musical, with book and lyrics by Allen Jay Lerner, and music by Frederick Loewe; with Sally Ann Howes, Peter Palmer, Farley Granger, and Edward Villela; May 30–June 10 (a limited engagement).
Calculated Risk, a play by Joseph Hayes, based on the play *Any Other Business,* by George Ross and Campbell Singer; with Joseph Cotten and Patricia Medina; October 31.
Can-Can, a revival of the musical, with book by Abe Burrows, and music and lyrics by Cole Porter; with Genevieve, George Gaynes, and Mara Lynn; May 16–27 (a limited engagement).
The Captains and the Kings, a play by Leo Lieberman; with Dana Andrews, Charlie Ruggles, Conrad Nagel, Lee Grant, and Peter Graves; January 2–6.
Come On Strong, a comedy by Garson Kanin; with Carroll Baker and Van Johnson; October 4–November 3.
The D'Oyly Carte Opera Company, presenting revivals of Gilbert and Sullivan's *The Mikado, The Gondoliers, The Pirates of Penzance, Trial by Jury, H.M.S. Pinafore,* and *Iolanthe;* November 13–December 9 (a limited engagement).
The Egg, a comedy by Félicien Marceau, translated by Robert Schlitt; with Dick Shawn; January 8–13.
A Family Affair, a musical, with book by James Goldman and William Goldman, lyrics by John Kander and James Goldman, and music by Mr. Kander; with Shelley Berman, Eileen Heckart, Bibi Osterwald, Morris Carnovsky, Rita Gardner, and Larry Kent; January 27–March 25.
Fiorello!, a revival of the musical, with book by Jerome Weidman and George Abbott, music by Jerry Bock, and lyrics by Sheldon Harnick; with Sorrell Booke, Art Lund, Lola Fisher, Barbara Williams, and Doby Goodman; June 13–24 (a limited engagement).
The Foo Hsing Theater (of Taiwan), in traditional Chinese dramas: *The Beautiful Bait,* November 12–17, December 24–January 2, 1963; (this company also presented *The White Snake,* Jan. 2–5, 1963, both limited engagements).
The Fun Couple, a comedy by Neil Jansen and John Haase, adapted from Mr. Haase's novel; with Bradford Dillman and Jane Fonda; October 26–27.
A Funny Thing Happened on the Way to the Forum, a musical based on the plays of Plautus; with book by Burt Shevelove and Larry Gelbart, and music and lyrics by Stephen Sondheim; with Zero Mostel, David Burns, Ruth Kobart, Brian Davies, Jack Gilford, and John Carradine; May 8.
General Seager, a play by Ira Levin; with George C. Scott and Ann Harding; February 28–March 1.
Giants, Sons of Giants, a play by Joseph Kramm; with Nancy Kelly, Claude Dauphin, and Paul McGrath; January 6–13.
A Gift of Time, a play by Garson Kanin; based on Lael Tucker Wertenbaker's book, *Death of a Man;* with Olivia de Havilland and Henry Fonda; February 22–May 12.
Great Day in the Morning, a play by Alice Cannon; with Colleen Dewhurst, Frances Sternhagen, Clifton James, Thomas Carlin, and Elisabeth Fraser; March 28–April 7.
Harold, a comedy by Herman Raucher; with Anthony Perkins, Nathaniel Frey, Rochelle Oliver, and Sudie Bond; November 29–December 15.
I Can Get It for You Wholesale, a musical adapted by Jerome Weidman from his novel; with music and lyrics by Harold Rome; with Lillian Roth, Elliott Gould, Marilyn Cooper, Sheree North, Bambi Linn, and Harold Lang; March 22–December 8.
In the Counting House, a play by Leslie Weiner; with Sydney Chaplin, Howard Da Silva, Barbara Murray, and Kay Medford; December 13–15.
Isle of Children, a play by Robert L. Joseph; with Patty Duke, Noel Willman, and Norma Crane, March 16–24.
Little Me, a musical based on the novel by Patrick Dennis; with book by Neil Simon, lyrics by Carolyn Leigh, and music by Cy Coleman; with Sid Caesar, Virginia Martin, Nancy Andrews, and Swen Swenson; November 17.
Lord Pengo, a comedy by S. N. Behrman, based on his *New Yorker* series, "The Days of Duveen"; with Charles Boyer and Agnes Moorehead; November 19.
Mr. President, a musical, with book by Howard Lindsay and Russel Crouse, music and lyrics by Irving Berlin; with Robert Ryan and Nanette Fabray; October 20.
Moby Dick, Orson Welles' dramatization of Herman Melville's novel; with Rod Steiger; November 28–December 8.
The Moon Besieged, a play by Seyril Schochen; with Charles Tyner, Ted van Griethuysen, Kathryn Hays, and Elizabeth Lawrence; December 5–6.
Never Too Late, a comedy by Sumner Arthur Long; with Paul Ford, Maureen O'Sullivan, and Orson Bean; November 27.
New Faces of 1962, a revue, with music and lyrics mostly by June Carroll, Arthur Siegel, David Rogers, Mark Bucci, Jack Holmes, and Ronny Graham, and sketches mostly by Mr. Graham, Paul Lynde, Jean Shepherd, Richard Maury, Joey Carter, and R. G. Brown; with Mr. Carter, Mr. Brown, Marian Mercer, Patti Karr, and Sylvia Lord; February 1–24.
Night Life, a play by Sidney Kingsley; with Neville Brand, Carol Lawrence, Walter Abel, Carmen Mathews, Salome Jens, and Jack Kelley; October 23–December 15.
No Strings, a musical, with book by Samuel Taylor, and music and lyrics by Richard Rodgers; with Diahann Carroll, Richard Kiley, Noëlle Adam, Polly Rowles, and Bernice Massi; March 15.
Nowhere to Go but Up, a musical, with book and lyrics by James Lipton, music by Sol Berkowitz; with Tom Bosley, Martin Balsam, and Bruce Gordon; November 10–17.
Old Vic, the London company, presenting, in repertory, productions of William Shakespeare's *Macbeth* and *Romeo and Juliet* and George Bernard Shaw's *Saint Joan;* February 6–March 18 (a limited engagement).
A Passage to India, a play by Santha Rama Rau, adapted from the novel by E. M. Forster; with Anne Meacham, Eric Portman, Gladys Cooper, and Zia Mohyeddin; January 31–May 5.
The Perfect Setup, a play by Jack Sher; with Angie Dickinson, Gene Barry, and Jan Sterling; October 24–27.
Romulus, a comedy by Friedrich Duerenmatt, adapted by Gore Vidal; with Cyril Ritchard, Cathleen Nesbitt, and Howard Da Silva; January 10–March 10.
The Royal Dramatic Theater of Sweden, presenting, in Swedish, a limited engagement of plays in repertory, including August Strindberg's *The Father* and *Miss Julie* and Eugene O'Neill's *Long Day's Journey into Night;* May 14–19.
Seidman and Son, a comedy by Elick Moll, based on his novel; with Sam Levene, Frances Chaney, Stewart Moss, and Nancy Wickwire; October 15.
Something About a Soldier, a play by Ernest Kinoy, adapted from the novel by Mark Harris; with Sal Mineo, Kevin McCarthy, and Ralph Meeker; January 4–13.
Step on a Crack, a play by Bernard Evslin; with Donald Madden, Gary Merrill, Margaret Hayes, Maggie McNamara, and Pauline Flanagan; October 17 (closed after one performance).
Stop the World—I Want to Get Off, a musical, with book, music, and lyrics by Leslie Bricusse and Anthony Newley; with Mr. Newley and Anna Quayle; October 3.
Tchin-Tchin, a play by Sidney Michaels, based on the play by François Billetdoux; with Margaret Leighton and Anthony Quinn; October 25.
A Thousand Clowns, a comedy by Herb Gardner; with Jason Robards, Jr., Sandy Dennis, William Daniels, Barry Gordon, Gene Saks, and A. Larry Haines; April 5.
Tiger Tiger Burning Bright, a play by Peter Feibleman, based on his novel *A Place Without Twilight;* with Claudia McNeill, Alvin Ailey, Bobby Dean Hooks, and Al Freeman, Jr.; December 22.
Venus at Large, a comedy by Henry Denker; with David Wayne, Joyce Jameson, William Prince, and Ernest Truex; April 12–14.
Who's Afraid of Virginia Woolf?, a play by Edward Albee; with Uta Hagen, Arthur Hill, and George Grizzard; October 13.

Broadway Closings of Presentations From Previous Years

The Caretaker, February 24 (from Oct. 4, 1961).
Come Blow Your Horn, October 6 (Feb. 22, 1961).
The Complaisant Lover, January 28 (Nov. 1, 1961).
Do Re Mi, January 13 (Dec. 26, 1960).
First Love, January 13 (Dec. 25, 1961).
The Gay Life, February 24 (Nov. 18, 1961).
Gideon, June 2 (Nov. 9, 1961).
Kean, January 20 (Nov. 2, 1961).
My Fair Lady, September 29 (March 15, 1956).
The Night of the Iguana, September 29 (Dec. 28, 1961).
Purlie Victorious, May 12 (Sept. 28, 1961).
Ross, May 12 (Dec. 26, 1961).
Sail Away, February 24 (Oct. 3, 1961).
A Shot in the Dark, September 22 (Oct. 18, 1961).
Subways Are for Sleeping, June 23 (Dec. 27, 1961).
Sunday in New York, May 12 (Nov. 29, 1961).
Take Her, She's Mine, December 8 (Dec. 21, 1961).
The Unsinkable Molly Brown, February 10 (Nov. 3, 1960).
Write Me a Murder, April 14 (Oct. 26, 1961).

TIBET

Independent until 1950, when it was invaded by Communist China's armed forces, Tibet is nominally an autonomous region of the Chinese People's Republic. It comprises a lofty plateau among massive mountain barriers in central Asia. It has an estimated area of 580,000 square miles and a population (1953 census) of 1,273,969. Lhasa (est. pop., 25,000) is the capital. Tibetan is the principal language, and Lamaist Buddhism the principal religion.

Government.—The administration is under the Preparatory Committee for the Tibetan Autonomous Region. The panchen lama (Erdani Chuji-Geltseng) is the acting chairman of the committee, but real authority over Tibetan affairs is exercised by Gen. Chang Kuo-hua, representative of the Peking government. After the Tibetan revolt of March 1959 was ruthlessly suppressed by the Chinese Communists, the dalai lama (Ling-ehr Lamatanchu), ruler of the theocratic government and largely feudal society which had existed in Tibet, fled the country to live in exile in India.

Economy.—Most Tibetans are peasants, nomads, handicraftsmen, or Lamaist priests. Crops include barley, fruits, wheat, and vegetables. Livestock yield wool, felt, yak's hair and hides, butter, cheese, and dried meat. External trade has been diverted largely to China; trade with India, Tibet's traditional chief trading partner, was curtailed drastically after the 1959 rebellion. On June 2, 1962, India refused to renew its Tibetan trade pact with China, and China closed its trade agency in Kamlimpong, India. Roads have been built to link Lhasa with Shigatse, Gyangtse, and Yatung (near India), and to connect Gartok in western Tibet with the Sinkiang-Uigur Autonomous Region of China. In 1962 a road linking Lhasa with Katmandu, Nepal, was under construction, as was a railroad extending for 1,600 miles from Lhasa to Sinkiang-Uigur. Lhasa is also linked to China by an air service.

Events, 1962.—Armed conflict broke out again in October on Tibet's southern and western frontiers, as Communist China and India fought over disputed border regions in Ladakh and the North East Frontier Agency (see CHINA; INDIA).

The number of Tibetan refugees fleeing to India, Bhutan, and Nepal fell off drastically in 1962 from the levels of previous years. Since the abortive anti-Communist revolts of 1959 and 1960, an estimated 70,000 persons have fled Tibet as a result of Chinese Communist repression and persecution. In 1962 the number dwindled to a few thousand, apparently because most of the Tibetans wishing to escape had already done so, and also because the Chinese rulers had relaxed their rigid control to some degree.

Sporadic incidents of revolt continued in Tibet, however. It was reported that rebellious Khamba tribesmen fought a pitched battle with Chinese troops in eastern Tibet on January 5, and that about 90 Chinese and 150 Khambas were killed.

The dalai lama, who lives in exile at Dharmsala, India, appealed again on March 9 to China to halt the "persecution and oppression" of his people. He also appealed for contributions from other countries for the rehabilitation of Tibetan refugees.

The issue of Tibet was raised again in the UN General Assembly on October 3 when Malaya accused Communist China of genocide and the denial of fundamental human rights in Tibet.

J. L. L.

TIMOR. See PORTUGUESE TERRITORIES.

TIN

In 1961 the United States mined a negligible quantity of tin and therefore depended on imports for its principal supply. According to data compiled by the U.S. Bureau of Mines, however, tin imports declined 9%. Imports of tin concentrates dropped drastically from 14,026 long tons in 1960 to 8,917 tons in 1961, whereas tin-metal imports rose slightly from 39,538 tons to 39,898 tons. (Data on smelter production in 1961 were withheld to avoid disclosing confidential data regarding the output of individual companies.) Consumption of tin in the United States decreased by 3% from 80,360 long tons (51,530 tons of primary and 29,030 tons of secondary) in 1960 to 78,250 tons (49,699 tons of primary and 28,551 tons of secondary) in 1961.

World consumption of tin was greater than production in 1961; and to meet the demand, stocks had to be withdrawn. The United States required 47% of world tin consumption in 1961 for making tinplate, the same as in 1960. The first International Tin Agreement was terminated and the second agreement went into effect on July 1, 1961. It was formally signed by 6 producing countries and 14 consuming countries (accession of Korea as a consuming party was approved).

The flow of tin from the Republic of the Congo (Léopoldville) continued to be retarded by civil strife. Nigeria began smelting tin and exported metallic tin to the United States for the first time. Free world tin exports to the USSR and its European satellites were resumed.

In the first nine months of 1962, United States tin consumption was 60,080 long tons (41,410 primary and 18,670 secondary).

(See MINERAL PRODUCTION for table showing output of major producing countries; and for further references, see the Index entry, *Tin.*)

TIROS SATELLITES. See METEOROLOGY AND CLIMATOLOGY; SPACE FLIGHT.

TITANIUM. See MINERAL PRODUCTION.

TITO (Josip Broz). See biographical sketch under YUGOSLAVIA.

TOBACCO

World production of tobacco increased again in 1962, in part because of a rise of 200 million pounds in United States output. The world total was estimated by the Foreign Agricultural Service of the U.S. Department of Agriculture at about 9.1 billion pounds (excluding China, for which figures were unavailable), compared with about 8.7 billion in 1961. Besides the United States, countries in which 1962 production increased considerably over that of 1961 included India, Pakistan, Japan, Greece, Italy, Yugoslavia, and the Federation of Rhodesia and Nyasaland. These gains were somewhat offset by smaller production in the USSR, Mexico, Brazil, Argentina, and Indonesia.

Tibetan refugees help build a mountain road in the northeastern area of India during Chinese invasion in October.

WIDE WORLD

Tobacco was harvested in 1962 from about 9,541,000 acres, compared with about 9,288,000 in 1961 and an average of 9,305,000 in 1955–59. Acreage increased notably in the United States, Europe, and Asia, while declining in Africa and several countries in Central America.

United States exports of unmanufactured tobacco in calendar year 1962 were estimated at about 520 million pounds export weight, equivalent to about 585 million pounds farm-sales weight. This was about 4% above the 1961 total of approximately 500 million pounds and was the largest in seven years. United States tobacco exports in the 1951–60 period averaged 489 million pounds. While rising world consumption of cigarettes favors long-term United States exports, discrimination against United States tobacco by the European Economic Community could seriously curtail exports to this vitally important market.

For the eighth consecutive year, cigarette output in the United States reached a new high, totaling about 539 billion, compared with 528.3 billion in 1961. Cigarette consumption, including that by military forces overseas, was about 512 billion, 9 billion more than in 1961. Consumption of cigars and cigarillos by United States smokers was estimated at 7,180 million in 1962, about 140 million more than in 1961. United States consumers spent about $6.9 billion for cigarettes in 1962, not including expenditures by overseas personnel.

TOBACCO PRODUCTION IN MAJOR COUNTRIES

(1,000 pounds, farm-sales weight)

	Average 1955–59	1961 prelim.	1962 prelim.
Brazil	306,009	333,895	314,334
Canada	165,770	211,210	203,900
China, Communist	1,687,600	...	...
France	120,416	76,112	77,580
Greece	199,945	162,287	216,687
India	596,366	659,000	670,000
Indonesia	153,267	179,675	163,515
Italy	168,220	53,351	97,620
Japan	315,506	278,516	313,260
Pakistan	238,568	189,459	199,000

TOBAGO. See Trinidad and Tobago.

TOGO

One of the smallest countries of Africa (est. area, 22,000 square miles), the Republic of Togo (formerly French Togoland) is situated on the Gulf of Guinea. It has the shape of a narrow rectangle, extending northward some 330 miles from its 31-mile coastline. The population of 1,500,000 (Jan. 1, 1962, est.) includes mainly Ewe, Mina, and other tribes in the south, some Hamitic groups in the north, and 1,077 Frenchmen. The capital and chief port is Lomé (1958 est., 65,000).

Government.—This former United Nations trust territory became independent on April 27, 1960. The constitution of 1961 provides for a presidential-type government and a unicameral legislature, the Chamber of Deputies, which consists of 51 members elected by universal suffrage for a five-year term. In elections on April 9, 1961, Sylvanus Olympio, who had served as premier since 1958, was elected president, and his National Unity Party won all the legislative seats without opposition. President Olympio was assassinated on Jan. 13, 1963, in a coup d'état by military insurgents who took over the government.

Education and Religion.—School enrollment, 1960: 88,000 (about one fifth of the total school-age population), including 85,800 primary pupils. An additional 140 secondary-school graduates attended French universities. Most of the population are animists. There are 30,000 Muslims in the north and some 200,000 Christians.

Finance.—Government ordinary revenue, 1962 est.: 3.3 billion francs CFA (3.0 billion in 1961); ordinary expenditure, 3.5 billion (3.3 billion). There are 246.85 francs CFA to the U.S. dollar.

Transportation and Communications.—Three short railways radiating from Lomé aggregate 275 miles. All-weather roads total about 800 miles (77 miles paved). Three French airlines serve the Lomé airport. In 1960, telephones numbered 1,776 (mostly in Lomé); radio receivers, 15,000.

Production.—Agriculture engages most of the working population, and accounts for more than half of the gross national product. Chief subsistence crops are yams, cassava, millet, sorghum, corn, beans, and rice. Chief cash crops (metric tons exported, 1961): palm kernels, 11,140; cocoa beans, 11,534; green coffee, 10,230; cottonseed, 3,244; cotton fiber, 2,433; copra, 4,818; and peanuts, 3,596. Industry is confined largely to food processing, weaving, pottery, and woodworking. Fishing and forestry are of minor importance. Exploitation of phosphate deposits totaling an estimated 50 million tons was begun by a French company in 1961.

Foreign Trade.—Total exports, 1961: 4,615 million francs CFA (up 28% from 1960); imports, 6,476 million (up less than 1%). Chief exports (in million francs CFA, 1961): cacao, 1,289; green coffee, 1,245. In 1961, France took about 57% of exports and supplied 46% of imports.

Events, 1962.—Togo on January 8 officially accused Ghana of supporting the assassination plot against Togolese officials that had been uncovered in December 1961. The government arrested and interned 64 persons allegedly involved in the plot, and as several of them were leaders of the principal opposition group, this party was dissolved by presidential decree. A third attempt to assassinate President Sylvanus Olympio (following two previous attempts in 1961) was foiled in mid-January, and a fourth attempt, in August, also failed.

A fifth assassination attempt, on Jan. 13, 1963, resulted in the death of President Olympio and occurred during a successful coup d'état by military insurgents in Lomé. The president was shot in front of the United States embassy, where he apparently had gone to seek refuge. The assassination of President Olympio removed a major political opponent of President Nkrumah of Ghana, for Olympio had stoutly opposed Nkrumah's efforts to incorporate Togo into Ghana. The late president was generally regarded as being moderate and pro-Western in his policies. During a visit to the United States from March 19 to 30, 1962, he had secured from President Kennedy a pledge to continue United States economic aid to Togo.

TONGA

Situated east of Fiji in the southwestern Pacific, Tonga is a self-governing kingdom under the protection of Great Britain. It comprises some 150 islands and is also called the Friendly Islands. Its total area is 270 square miles, and the population (Dec. 31, 1961, est.) is 66,000, of which about half live on the island of Tongatabu. Nukualofa (est., 10,000) is the capital and principal town. The Tongans are Polynesians and Christians, principally Wesleyan. Tongan is the principal language.

The islands are headed by a hereditary monarch (Queen Salote Tupou; b. 1900; acceded 1918), who is assisted by a premier (Prince Tungi, the heir apparent), a privy council, a cabinet, and a 22-member Legislative Assembly of 22 members, 7 of whom are elected for three-year terms by universal suffrage. British responsibilities, chiefly in the area of external affairs, are exercised by a resident commissioner (E. J. Coode), under the direction of the governor of Fiji. Tonga has its own currency (the Tonga pound equals U.S.$2.24), and its own postage stamps. School enrollment, 1960: primary, 15,348; secondary, 4,121; and teacher-training, 66.

Subsistence agriculture is the basis of the economy. Exports in 1961 were valued at £1,140,000; imports, £1,060,000. The principal exports were 17,400 metric tons of copra and 9,480,000 pounds of bananas. Trade is conducted principally with Great Britain and other members of the Commonwealth of Nations. The road network on Tongatabu totals 60 miles, and on the island

of Vavau, 18 miles. In 1961 there were 653 telephones. Tonga is connected with Fiji by an air service.

TORNADOES. See METEOROLOGY AND CLIMATOLOGY and the Index entry, *Tornadoes.*

TORONTO

The capital of Ontario and second-largest city in Canada, Toronto is situated on the north shore of Lake Ontario. It is one of the country's two largest centers of commerce, finance, and industry, as well as an important port on the St. Lawrence waterways system. The city proper has an area of 35 square miles, a population of 672,407 (1961 census), and a general assessment value of $1,888,214,899 (1962). Metropolitan Toronto covers an area of 245 square miles and has a population of 1,618,787 (1961 census) and a general assessment value of $4,067,737,909 (1962).

There is a dual system of government, with municipal functions divided between the local governments (of the city proper and its 12 suburbs) and an overall Municipality of Metropolitan Toronto. A revision of this system has been widely discussed.

Metropolitan government consists of a Council of 24 representatives, who elect their own chairman (William R. Allan in 1962), composed as follows: the heads of council of each of the 12 suburban municipalities; and, from Toronto proper, the mayor, the two controllers, and the aldermen who received the most votes at the last election in each of the nine city wards. The Metropolitan Corporation is responsible for issuing debentures and determines what local permanent financing should be done by the 13 municipalities. Aside from the Metropolitan Police Commission, most metropolitan departments are duplicated in, or share functions with, corresponding local departments. Public transportation in the metropolitan area is provided by the Toronto Transit Commission; it operates surface, underground, and ferry services, which carried 267,482,653 revenue-paying passengers in 1961.

The Toronto City Council is composed of the mayor (Nathan Phillips in 1962), four members of the Board of Control (elected by the voters at large), and 18 aldermen (two from each of the nine city wards). The Council was elected for a two-year term in December 1960.

During 1962, construction continued on the Bloor-Danforth-University subway, which would add 10 miles to the city's underground transportation when completed in 1967. The University section was scheduled to be opened in early 1963. Road traffic was helped by the opening of another section of the Gardiner Expressway, and further expressway construction was approved.

In 1961 the total value of building construction reached $108,065,000. Work was begun on the new city hall, which was scheduled to cost $26.5 million, plus architects' fees, and to be completed in 1964. The architect Viljo Revel, of Helsinki, Finland, won an international competition in which there were 530 entries.

The University of Toronto continued its expansion program with four new buildings under construction, to house the schools of pharmacy and music, Massey College of Graduate Studies, and additional chemistry facilities. In early 1962, York University was given a grant of 465 acres for a main campus by the provincial government. The Royal Ontario Museum celebrated its 50th anniversary in 1962 with special displays.

FREDERICK H. ARMSTRONG,
Department of History, University of Toronto.

TOURISM

The annual survey of foreign travel conducted by the Office of Business Economics, U.S. Department of Commerce, indicates that United States residents spent $2.6 billion for foreign travel in 1961, about the same as in 1960. Of this amount, all except about $400 million went to foreign countries either as fare payments to foreign transoceanic carriers or as payments for expenses within the foreign countries.

EXPENDITURES BY U.S. RESIDENTS FOR TRAVEL IN FOREIGN COUNTRIES[1]
(In millions of dollars)

Area	1958	1959	1960	1961
Canada	323	365	380	425
Mexico	319	350	365	370
Europe and Mediterranean	560	604	704	630
West Indies and Central America	156	174	166	160
South America	37	41	45	48
Other overseas areas	65	76	85	114
Total	1,460	1,610	1,745	1,747

[1] Excludes travel by military personnel and other government employees stationed abroad, their dependents and United States citizens residing abroad, but includes shore expenditures of cruise passengers. (Source: Office of Business Economics, U.S. Department of Commerce.)

Travel to U.S. from Abroad.—The number of overseas visitors to the United States in 1961 (numbering 624,000, exclusive of Canadians and Mexicans) was about 20,000 higher than in 1960. Visitors from foreign countries spent $902 million and paid an additional $112 million to United States carriers for transportation to and from the United States. The increase over 1960, slightly over 1%, left the excess of United States payments for foreign travel at approximately $1.1 billion.

Major Developments in U.S. Travel. *Exemptions.*—A person arriving in the United States as a temporary visitor, including a minor, may bring in, free of duty and internal revenue tax, articles not exceeding $100 in value for use as bona fide gifts. This allowance includes not more than one wine gallon of alcoholic beverages and not more than 100 cigars. This exemption is allowable only if the nonresident remains in the United States for at least 72 hours, and may not be used more than once within a six-month period. The gift exemption is in addition to alcoholic beverages, cigars, cigarettes, and smoking tobacco, valued at not more than $10, allowed as personal effects.

Tax.—The 10% tax on rail and bus transportation was eliminated and the tax on air travel was reduced from 10% to 5%, effective on Nov. 15, 1962.

U.S. Travel Service.—The overseas organization is built around nine travel information offices located in London, Paris, Frankfurt, Rome, São Paulo, Bogota, Mexico City, Sydney, and Tokyo. The offices are staffed by one or two travel service officials, plus supporting local staffs.

TREASURY DEPARTMENT, U.S.

Net receipts of the federal government during the fiscal year ended June 30, 1962, amounted to $81,360,367,259, compared with $77,659,424,905 in the fiscal year ended June 30, 1961. Net expenditures were $87,667,980,122, as against $81,515,167,453 in the 1961 fiscal year. The budget deficit was $6,307,612,863 in the fiscal year 1962, and $3,855,742,548 in fiscal 1961.

Budget expenditures in the fiscal year 1962

were $6.2 billion higher than in 1961. Of this amount, $4.3 billion or, 70%, was for defense and for international and space programs. Budget receipts rose by $3.7 billion between 1961 and 1962. Increases of $4.5 billion in individual income tax receipts and $659 million in excise tax collections were partially offset by declines of $469 million in corporation income taxes and $890 million in miscellaneous receipts. (See also TAXATION.) In 1961 over $500 million in miscellaneous receipts was accounted for by an advance loan repayment by the Federal Republic of Germany.

Table 1—BUDGET RECEIPTS AND EXPENDITURES FISCAL YEARS 1962 AND 1961

(In millions)

Description	1962	1961
Receipts by source		
Individual income taxes	$50,620	$46,153

Total	$88,301	$82,169
Deduct interfund transactions	633	654
Total budget expenditures	$87,668	$81,515
Budget deficit	$6,308	$3,856

Note: Figures are rounded to nearest million and do not necessarily add to totals.

Public Debt.—Total public debt and guaranteed obligations of the federal government on June 30, 1962, amounted to $298,645,041,645, compared with $289,211,154,060 a year earlier. Interest payments on the public debt amounted to $9,140,153,832 in the 1962 fiscal year, as against $8,957,241,615 during the previous fiscal year. The computed average interest rate on the interest-bearing debt was 3.240% on June 30, 1962, and 3.072% the year before. The per capita debt was $1,600.38 at the end of the 1962 fiscal year, and $1,574.80 at the end of fiscal 1961.

Federal Government Receipts from and Payments to the Public.—The flow of money between the public and the federal government (Table 2) is sometimes called "the consolidated cash budget." To derive the total receipts and payments, transactions of the trust funds are consolidated with budget transactions. Transactions between them, such as interest paid by the Treasury to trust funds, are eliminated, along with certain other noncash transactions. For example, interest which accrues on savings bonds is counted as a budget expenditure at the time of accrual. Since the interest is not paid in cash until the bond is redeemed, the consolidation eliminates the interest accruals and includes the interest paid on redeemed bonds.

The figures in Table 2 are not the same as those for Treasury cash deposits and withdrawals as presented in the *Daily Treasury Statement*. For example, transactions from various agency accounts with commercial banks are not included in Treasury cash deposits and withdrawals, but are reflected in Table 2.

Table 2—FEDERAL GOVERNMENT CASH RECEIPTS FROM AND PAYMENTS TO THE PUBLIC, FISCAL YEARS 1962 AND 1961

(In millions)

Description	1962	1961
Receipts from the public:		
Budget receipts	$ 81,360	$77,578
Trust fund receipts	24,336	23,792
Less:		
Intragovernmental transactions	3,786	4,170
Receipts from exercise of monetary authority	58	55
Total receipts from the public	$101,853	$97,144
Payments to the public:		
Budget expenditures	$ 87,668	$81,503
Trust fund expenditures	24,118	23,182
Government-sponsored enterprise expenditures (net)	1,083	—239
Less:		
Intragovernmental transactions	3,786	4,170
Accrued interest and other noncash adjustments (net)	1,492	985
Total payments to the public	$107,591	$99,291
Excess of payments to the public	$ 5,738	$ 2,147

Savings Bonds.—Sales of Series E and H savings bonds during the first 10 months of 1962 amounted to $3,656 million, compared with $3,838 million in the same period of 1961. Interest accumulated on E bonds amounted to $1,136 million, as against $1,066 million during the first 10 months of 1961. Interest on H bonds is paid to the holders semiannually. Redemptions of both matured and unmatured E and H bonds during the 10 month period of 1962 totaled $3,993 million, including interest payments of $652 million. During the same period of 1961, redemptions were $3,810 million, including E bond interest of $600 million. Series E and H bonds outstanding on Oct. 31, 1962, amounted to $45,284 million, compared with $44,232 million a year earlier.

About 50% of the $34.3 billion of Series E bonds which reached maturity after May 1951 were still being held by the owners, who had earned some $3 billion in additional interest during the extension of maturity. Including the additional interest, extended E bonds still held were valued at approximately $18.8 billion on Oct. 31, 1961. Series H bonds began maturing in June 1962; and by the end of October, $164.3 million had come due. Holders of 93% of the bonds accepted extensions and continued to receive the 3¾% interest. The value of all series of savings bonds outstanding on Oct. 31, 1962, was $47.8 billion.

Coins and Currency.—The Bureau of the Mint produced 3,460,524,142 domestic coins with a face value of $143,311,430 during the 1962 fiscal year. United States monetary stocks of gold and silver bullion in custody of mint depositories at the close of the 1962 fiscal year were valued at approximately $18.3 billion. The Bureau of Engraving and Printing delivered 1,556,424,000 pieces of new currency during the fiscal year 1962, having a face value of $7,770,752,000.

Money in Circulation.—Coins and currency in circulation outside the Treasury Department on Sept. 30, 1962, amounted to $33,893,116,904, or $180.88 per capita.

TREASURY INFORMATION SERVICE.

TREATIES. See INTERNATIONAL LAW and the Index entry, *Treaties, International.*

TRINIDAD AND TOBAGO

Formerly a British colony and a member of the West Indies federation, the Caribbean islands

of Trinidad (area, 1,864 square miles) and Tobago (116 square miles) became an independent state within the Commonwealth of Nations on Aug. 31, 1962. Trinidad is situated 10 miles off the northeast coast of Venezuela; Tobago lies 21 miles to the northeast of Trinidad. The state has a total area of 1,980 square miles, or slightly less than that of Delaware. The total population (1960 census) is 827,957 (Trinidad, 794,624; Tobago, 33,333), comprising principally persons of African ancestry (about 43% of the population) and East Indian descent (about 36%). The capital and chief port of the new state is Port of Spain (1960 pop., 93,954), on Trinidad.

The national flag of Trinidad and Tobago comprises a black diagonal stripe bordered in white and inscribed on a field of red.

Government.—The head of state is the governor general (Sir Solomon Hochoy, who took office on Aug. 31, 1962). Executive power is vested in a prime minister (Eric Williams), who presides over a 12-member cabinet. Legislative power is exercised by a bicameral Parliament consisting of a 30-member House of Representatives elected by universal suffrage and a 24-member Senate appointed by the governor general. In the elections of Dec. 4, 1961, the People's National Movement won 20 seats and the Democratic Labour Party won 10 seats in the House of Representatives.

Finance.—Government revenue for 1961 was estimated at BWI$146,270,490; expenditure from consolidated funds, BWI$173,170,482, and from other sources, BWI$10.2 million. The British West Indian dollar (BWI$) equals U.S.$0.59.

Education.—Over three fourths of the school-age population attends school. In 1961 there were 437 primary schools (with 182,588 pupils); 8 intermediate schools (7,291 pupils); and 35 secondary schools (13,907 students).

Transportation and Communications.—Roads aggregate 2,525 miles. The government operates 109 miles of railways. Piarco Airport, 17 miles from Port of Spain, is an international airport served by British West Indian Airways and 10 other airlines. Telephones in 1960 totaled 30,845; licensed radio receivers, 58,000; licensed vehicles, 38,000.

Production.—Production of petroleum is the mainstay of the economy. At the end of 1961 there were 5,915 oil wells, of which 3,249 were in production. Crude oil output totaled 45,817,000 barrels in 1961, and imports of crude oil totaled 62,847,000 barrels. In 1961, production of natural gas totaled 831.6 million cubic meters (up 8%); cement, 98,000 metric tons (down 44%); and electricity, 499 million kw.-hr. (up 7%). Sugar is the principal agricultural product (245,600 metric tons in 1961).

Foreign Trade.—Total exports, 1961: BWI$593,933,477; imports, BWI$575,788,673. Principal exports: crude oil and petroleum products, BWI$493,917,711; sugar, BWI$42,376,168. Exports are sent mainly to Great Britain, the United States, and the Netherlands. Imports come mainly from Great Britain, Venezuela, and the United States.

Events, 1962.—Following the decision of Jamaica to withdraw from the West Indies federation, the ruling People's National Movement declared on January 14 that it would seek immediate independence for Trinidad and Tobago, and rejected proposals that the territory join a new federation. Eric Williams, leader of the People's National Movement, declared that his party's victory in the elections of Dec. 4, 1961, was a popular repudiation of federation. (See also WEST INDIES FEDERATION.)

Details of the constitutional structure of the new state were worked out at a conference held in London from May 28 to June 8, in which leaders of all of Trinidad's political parties participated. After 165 years of British rule, Trinidad and Tobago became independent on August 31. The new state immediately joined the Commonwealth of Nations. On September 18 it was admitted to membership in the United Nations.

In his book issued on independence day, *History of the People of Trinidad and Tobago*, Prime Minister Williams was highly critical of the previous arrangements for leasing to the United States the naval base at Chaguarmas, on the northwest tip of Trinidad. It was expected that the government would use the base as a bargaining point in future negotiations with the United States for financial aid.

TUNISIA

Tunisia is a republic on the Mediterranean coast of north-central Africa, having an area of 48,332 square miles. The population has increased by 13% from 1952 to 1960, and totaled an estimated 4,254,000 as of July 1, 1961. Most of the population comprises Arabic-speaking Muslims. Europeans include about 110,000 French and 45,000 Italians; there are also some 63,000 native Jews. Nearly all of the estimated 180,000 Algerian refugees temporarily in the country returned to Algeria in 1962. The official language is Arabic. The capital is Tunis (1960 est., 680,000). Other chief cities and populations (1956 est.): Sfax (65,635); Sousse (48,172); and Bizerte, 46,681.

Government.—Tunisia attained independence from France on March 20, 1956, and deposed the absolute monarchy of the bey of Tunis on July 25, 1957, when Habib Bourguiba, leader of the Neo-Destour Party, was installed as president. The constitution of June 1, 1959, provides for a strong executive, a unicameral legislature, and an independent judiciary. The National Assembly consists of 90 members elected by universal suffrage for five years. In the elections of Nov. 8, 1959, Bourguiba, the sole candidate, was elected president to a five-year term, and the Neo-Destour won all the seats in the Assembly.

Education and Religion.—About 31% of all school-age children attended school in 1960. School enrollment, 1960: primary, 393,812; secondary, 44,686; technical, 14,126; teacher-training, 1,435; higher, 2,626. An additional 1,500 students attended institutions of higher learning abroad. On Sept. 17, 1962, the International Development Association loaned Tunisia $5 million to help construct six secondary and technical schools; the project is part of Tunisia's 10-year, $210 million educational expansion program that was adopted in 1962. The constitution proclaims Tunisia a Muslim state, but freedom of worship is guaranteed. President Bourguiba has sought to loosen the hold of certain traditional Muslim practices (such as the month-long daylight fast of Ramadan) which have hampered economic development.

Finance.—The ordinary budget for the fiscal year ended March 31, 1962, was balanced at an estimated 55.8 million dinars (up 5% from fiscal year 1961); the supplementary budget for government monopolies, 15.1 million (up 3.5%); and the capital expenditure budget for economic development, 32.6 million (of which 39.2% was derived from foreign aid). United States aid committed to Tunisia by the Agency for International Development totaled $140.6 million in loans and grants by the end of 1961. Public debt: $184 million at the end of 1960 ($203 million as of March 31, 1959). Gold and foreign exchange reserves: $78.8 million at the end of 1961 ($97.0 million a year earlier).

Transportation and Communications.—Transport networks (miles, 1962): railways, 3,650; paved highways, 4,625; other roads, 5,025. Ten national and foreign airlines provide local and international services. A new runway to handle jet aircraft was under construction in 1962 at El Aouina Airport, near Tunis. The country's main ports are Tunis, Bizerte, Sousse, and Sfax. Other data for 1960: passenger cars, 44,000; commercial vehicles, 23,500; telephones, 41,550; radio receiver licenses, 170,000.

Agriculture.—Agriculture accounts for 32% of the national income (279 billion dinars in 1961) and engages 70% of the male labor force. The more important agricultural products are wheat, olive oil, and wine, which together provide about 40% of annual export value. A severe drought in 1961 reduced the grain harvest by about 50% from the previous year, and caused substantial reductions in other crop yields and in the number of livestock. As a result, output of wheat in the 1961–62 crop

year fell to an estimated 207,000 metric tons (from 439,000 metric tons in 1960–61); barley, to 87,000 metric tons (from 146,000 metric tons); olive oil, 38,000 (137,000); citrus fruit, 77,000 (95,000); and wine (prelim.), 134,000 (140,000). Other crops include vegetables, flaxseed, esparto grass, dates, and cork.

Manufactures and Minerals.—Manufacturing, centered largely around Tunis, contributes 12% of the national income but provides few products for export; mining accounts for only 5% of the national income and supplies about 30% of the annual export value. Chief manufactures: cement (329,000 metric tons in 1961), superphosphates (72,000 metric tons), building materials, agricultural products, shoes, textiles, leather, beverages, rugs, carpets, and embroideries. Chief minerals and 1961 outputs (in metric tons): phosphates, 1,950,000 (down 11% from 1960); iron ore, 904,000 (down 12%); lead, 18,400 (down 7%); and zinc, 3,300 (down 15%). Electric power production (1961): 282 million kw.-hr. (up 3%).

Foreign Trade.—Total exports, 1961: 46.5 million dinars (down 8% from 1960); imports, 90.6 million (up 13%). Due to the severe drought in 1961, Tunisia's grain exports declined from $12.4 million in the previous year to only $3.9 million, and imports of wheat increased from $11.2 million in 1960 to $30.2 million in 1961. Chief exports and 1961 values (in million dinars): phosphates, 9.96; olive oil, 9.59; wine, 7.74. Imports are mainly petroleum products, sugar and other foodstuffs, machinery, and other manufactures. France purchased 55% of Tunisia's 1961 exports, and provided 54% of imports; Italy took 9% of total exports, and the United States supplied 15% of imports.

Events, 1962.—Rising opposition to the government of President Habib Bourguiba culminated in two assassination attempts against his life in mid-December that were foiled by the police. More than 100 persons were arrested after details of the second plot were discovered on December 21, but a few hours before the assassination attempt was to take place. The plotters reportedly included a few disgruntled army officers, some dissident landowners, and many supporters of the late Salah ben Youssef, Bourguiba's principal political opponent who had been murdered under mysterious circumstances while living in exile (in West Germany) in 1961. The plotters apparently had aimed only at eliminating Bourguiba and had not devised plans for a coup d'état. Official spokesmen indicated that "misguided elements" directed by a foreign government (possibly Algeria or the United Arab Republic) were behind the plots. Many details were not disclosed, however, and the Tunisian government played down the possible significance of the assassination attempts.

Opposition to the government has increased because of dissatisfaction on the part of Muslim leaders with the government's religious reforms, some popular resentment against the recent construction of three costly palaces for the president's use, and Tunisia's recent economic difficulties. The country's per capita annual income is only $80, approximately 400,000 persons were unemployed in late 1962, and the economy has continued to suffer from the effect of three successive years of disastrous droughts. President Bourguiba, in a national address on November 2, acknowledged that the current poor olive harvest had necessitated the importing of vegetable oils from the United States for domestic use, in order to maintain substantial olive oil exports that pay for needed industrial equipment. Despite his government's economic troubles and the existence of increased opposition to his rule, however, Bourguiba apparently has retained the support of a majority of Tunisians.

Vast economic improvement was the objective of an ambitious three-year development plan (1961–64) promulgated by the government on May 30. The plan aims to increase the gross national product by 6% annually, and is the first stage of a 10-year program intended to make the country economically self-sufficient by 1971. Total expenditure under the three-year plan is $785 million, of which $334 million is for agriculture and irrigation, $201 million for communications and electric power development, $167 million for industry, and $83 million for education. Of the total cost, Tunisia is to provide $428 million from its own resources; the United States on July 28 committed $180 million in loans by the Agency for International Development to support the program; and other foreign sources are expected to provide the remaining $177 million. Major industrial projects include the construction of plants to manufacture cellulose, nitrate fertilizer, superphosphates, and steel, and to refine petroleum.

Tunisia and France settled their dispute over the Bizerte naval base—a conflict which had led to sharp fighting between French and Tunisian forces in the Bizerte area on July 19–20, 1961. The two countries resumed diplomatic relations on July 20, 1962, a year to the day after ties were broken, and President Bourguiba, on July 25, announced that France had agreed to evacuate unconditionally the Bizerte base. No date was set for final evacuation, but a Tunisian spokesman later said that French forces would complete or "almost" complete their withdrawal from the base "by the end of 1963." France began to transfer to Tunisia the installations in the southern part of the Bizerte base on June 28, 1962. The settlement of the dispute greatly improved Tunisia's relations with France and tended to strengthen her ties with the West.

Mongi Slim, Tunisia's representative to the United Nations who had served as president of the General Assembly during its 16th session in 1961–62, was appointed foreign minister on August 15. He succeeded Sadok Mokaddem, who was named ambassador to France.

W. R. F.

TUNNELS

Tunnel construction advanced in various parts of the world during 1962, particularly in the United States and Europe. Major tubes were completed and techniques improved in both hard-rock tunneling and trench-type construction. Tunnels between countries, once considered strategically risky, are becoming commonplace and seem to represent a kind of international cooperation in this age of worldwide tension.

United States. *Vehicular Tunnels.*—The trench method of tunnel construction, probably the most important development in this field in the last half-century, helped to speed work on three major highway tunnels in the United States. The most impressive project, the Chesapeake Bay Bridge-Tunnel, advanced steadily during 1962 despite a spring storm which caused some delays. The 17.5-mile highway link between Virginia and Delaware's Delmarva Peninsula involves some of the most extensive and expensive marine construction techniques ever undertaken. Two tunnels, each about a mile long, will run under the main navigation channels, thereby avoiding the necessity for building high-level bridges. Both are trench-type tunnels. Steel tubes prefabricated on dry land are floated to the site above a trench dredged in the bay bottom. Concrete, poured between the double walls of the tubes, sinks the 268-foot-long sections into place. Divers fasten them to the previous section. Once each tube is joined, a temporary bulkhead sealing its end is removed and the section becomes part of the tunnel. Finally, the trench is filled in to cover the tunnel. Neither of the tunnels connects with the mainland. Both tubes surface at each end on man-made islands built far out in the bay. The islands serve as transition points where the tunnels meet the bridge and trestle sections. Huge rocks protect the sand

French and Italian workers met under Mont Blanc on August 14 as boring for the Mont Blanc Tunnel was completed. The tunnel was expected to be opened to traffic in 1964. (*Left*) General view of the tunnel. (*Right*) Entrance from Italian side.

islands' shores from wave action. (See also BRIDGES.)

Traffic moved during 1962 through another tunnel built by the trench method under the Elizabeth River in Virginia. This 4,200-foot-long tube is the second underwater vehicular link between Norfolk and Portsmouth. Twelve 33-foot-diameter tube sections were required. The largest, over 300 feet long, contained nearly 600 tons of steel, in addition to concrete ballast. Total cost of the tube was $22 million.

In California, a second tube between Oakland and Alameda neared completion during 1962. The two-lane highway tunnel parallels an existing tube completed 35 years ago. The trench method also was used on this $16.6 million project.

Voters in the San Francisco area approved a $792 million bond issue to finance a rapid transit system that includes a four-mile-long tunnel under San Francisco Bay. The new tunnel will carry fully automated, high-speed electric trains between Oakland and San Francisco. The $133 million tunnel will be the first construction start on the overall scheme, set for completion about 1970.

Water Tunnels.—Excavation began in 1962 on two vertical shafts over 900 feet deep, marking the beginning of a spectacular tunnel between Brooklyn and Staten Island under New York Bay. This 10-foot-diameter, 25,000-foot-long, hard-rock bore will deliver 300 million gallons of water a day to Staten Island (the city's Borough of Richmond), which is expected to develop rapidly on completion of the Narrows Bridge. Presently, the island borough's only links with the rest of the city are by ferry to Manhattan and Brooklyn. Deep hard-rock water tunnels are not new to the city. Two feeder tunnels run the length of the city, and a third is planned. Also, the longest tunnel in the world, the 85-mile Delaware Aqueduct, was built to bring upstate water to New York City.

Europe.—On Aug. 14, 1962, French and Italian tunnelers more than a mile underground celebrated the holing through of Mont Blanc Tunnel, the world's longest vehicular tunnel, which runs 7.25 miles under Mont Blanc in the Alps. To be completed by 1964, the Mont Blanc Tunnel will be the first all-weather highway connection through the Alps between Italy and France. Most Alpine roads are closed much of the year by snow. Mont Blanc tunnelers encountered great difficulties, particularly on the Italian side. Poor-quality rock and heavy inflows of water hampered progress, ruined much equipment, and took a dozen lives.

On April 5, 1962, Alpine tunnelers holed through the 3.6-mile-long Grand St. Bernard Tunnel high in the Pennine Alps, between Switzerland and Italy. This highway tunnel makes obsolete the highway through the famous Grand St. Bernard Pass. Although the tunnel is 2,000 feet lower than the pass, snow will still be a problem on roads leading to the bore at 6,200 feet elevation. About 10 miles of approach roads will be covered with heavy concrete roofs to keep them open in winter.

The Dutch had two vehicular tunnels under way in Amsterdam during 1962, both under the Het IJ, a stretch of water connecting the IJsselmeer (formerly part of the Zuider Zee) with the Nordzee Canal. Both are relatively short, trench-type tunnels. One is called the IJ Tunnel, the other Coentunnel.

Africa.—A huge river development project in South Africa, just getting under way in 1962, will include the Fish River Tunnel. This 51-mile-long water tunnel is a key phase of the $650 million, 30-year Orange River Project.

Proposed Tunnels.—Many tunnels remained on the proposed list during 1962. Most prominent among them is the tunnel being considered under the English Channel. No decision was reached on whether to build a tunnel or bridge, but the tunnel proposal seems more likely to be accepted, if, in fact, any crossing is ever built. The estimated cost of the tunnel is considerably lower than that of a bridge, and private interests are said to be ready to finance the tunnel. Government assistance is considered inevitable if a bridge is to be built, and this opens up a whole new area of negotiation.

France and Spain agreed in June 1962 to build a highway tunnel through the Pyrenees Mountains. The 1.88-mile bore will reduce highway mileage between Paris and Madrid by about 25 percent and take two years to build.

WILLIAM W. JACOBUS, JR.,
Assistant Editor, "Engineering News-Record."

TURKEY

The Republic of Turkey comprises Anatolia (Asia Minor) and Eastern Thrace (European Turkey); its area is 296,185 square miles, and its population (1961 est.) is 28,602,000. The country's capital is Ankara (1960 pop., 646,151); other principal cities include Istanbul (formerly Constantinople; 1,459,528); Izmir (formerly Smyrna; 370,923); Adana (230,024); Bursa (153,574); and Eskişehir (153,190). The vast majority of the population are Muslims (99%) and speak Turkish as their native language (90.4%). Most Turkish Muslims belong to the Sunni sect, although there is a large Shi'ite minority. The non-Muslim groups (Greek and Armenian Christians, and Jews) total 214,000 and are concentrated in Istanbul and Izmir. Ethnic minorities include the Kurds (at least 1.5 million), largely in the eastern provinces, and Arabs (346,000) in the south.

Government.—Turkey is a republic, and all citizens over 21 years are entitled to vote for the bicameral Grand National Assembly, which consists of a 187-seat Senate (150 elected members, of whom 50 are elected every two years) and an Assembly of 450 members elected every four years on the basis of proportional representation from each of the 67 provinces. As a result of the last general election (Oct. 15, 1961), and subsequent changes, Senate seating was as follows: Justice Party (led by Ragip Gümüşpala), 64; Republican People's Party (led by Ismet Inönü), 35; New Turkey Party (led by Ekrem Alican), 27; Republican Peasants Nation Party (led by Osman Bölükbaşi), 7; others, 2; independent, 50; vacancies, 3. The Senate includes 15 persons appointed by the president and the 22 members of the Committee of National Unity, who hold lifetime seats. Assembly seating was as follows: Re-

publican People's Party, 171; Justice Party, 150; New Turkey Party, 63; Republican Peasants Nation Party, 32; independents, 31; vacancies, 3.

The president is Cemal Gürsel, elected for a 7-year term in 1961. The prime minister is Ismet Inönü, who has headed a coalition cabinet since 1961. The cabinet is responsible only to the lower house.

Under the new constitution effective on July 20, 1961, the president must be elected by a joint session of the two houses from among their members. The prime minister, who must likewise hold a seat in one of the houses, is named by the president.

Finance.—The monetary unit is the Turkish lira (T£), which was officially valued at U.S.$0.1111 on Aug. 20, 1960. The budget for 1962 was estimated at T£10.1 billion (up 16% from 1960), of which 25.3% (24.4% in 1961) was allocated for national defense and 13.4% (14.9% in 1961) for education. In May 1962 the public internal debt totaled T£9.6 billion, and the foreign debt, T£5.5 billion. The Central Bank's gold and foreign exchange assets totaled T£1,990 million as of Sept. 22, 1962, and its gold and foreign exchange liabilities, T£1,329 million.

From the origin of the Truman Doctrine in 1947 through June 1962, United States military aid to Turkey has approximated $2.4 billion, and economic aid, $1.7 billion. In 1961, Turkey closed its adverse balance of payments ($217 million) by receipt of private capital ($26 million); Agency for International Development aid ($124 million); commercial credit ($68 million); and other loans and credits granted by international agencies and foreign nations ($78 million).

Education.—Virtually all schools are operated by the national Ministry of Education, principal exceptions being Robert College (American), in Istanbul, and other foreign and minority schools. School enrollment, 1960–61 school year: 2.6 million (down 0.1 million from 1959). In 1960, 40.3% of the population 7 years of age or older was reported to be literate. School authorities are concerned about the slow increase in literacy and the estimated 5 million children of school age not in school. As of early 1962, over 15,000 villages had no school facilities. There are six universities under varying degrees of state control (Istanbul, Ankara, Istanbul Technical, the Aegean University in Izmir, the Middle East Technical in Ankara, and Atatürk University in Erzurum).

Transportation and Communications.—At the end of 1960, Turkey's highway network consisted of 23,794 miles of all-weather roads, serving a total of about 115,000 commercial and passenger vehicles. There were 4,885 miles of railroad, mostly single track and entirely state owned and operated. The Turkish State Airways, Inc., flew 88 million passenger-miles in 1960 and operated 34 aircraft. The Turkish merchant marine (of 18 gross tons and over) totaled 834,000 tons at the end of 1960. Turkey's three radio stations (Istanbul, Ankara, and Izmir) are government-operated. In 1962 there were 1,503,816 licensed radio receivers and 189,284 telephones in use.

Economic Conditions.—In 1961–62, money remained in short supply as public confidence failed to reassert itself after the 1960 military coup. Bank credit in 1962 increased only 4.4% over 1961 (2.3% over 1960), and savings deposits rose to a new record high. Prices fell off by 2% during the year, reaching their lowest level since 1956. The release of United States counterpart funds equivalent to T£1.0 billion created low-interest money for industry to a limited extent.

The general stagnation in the market and the rapid population increase created a serious unemployment problem. In August 1962, unemployment was an estimated 1.5 million persons, or about 11% of the labor force. In addition, there was considerable underemployment in certain industries.

Details of a five-year development plan were announced in August 1962. It called for an investment of over T£9 billion, with heavy emphasis on industrial projects and agricultural development.

The 1960 gross national product was estimated at T£44.9 billion (up 0.7% from 1960), of which agriculture accounted for 43.9%, and industry for 10.5%. Per capita income at 1948 prices was T£567 (T£1,540 in current prices), a drop from T£590 estimated for 1959.

Agriculture.—Of the total land area in 1960, about 36% was in meadows and pasture, 30% in cultivated crops (including 10% in fallow), 3% in orchard and vineyard, 14% in forest, and 17% in unproductive area. Principal crops and 1961 output (in thousands of metric tons) were: wheat, 7,000; barley, 2,970; sugar beets, 2,860; grapes, 2,775; potatoes, 1,409; onions, 406; olives, 424 (1960); cotton, 200; tobacco, 110; and hazelnuts, 32. Other important crops include a variety of nuts, fruits, and vegetables. Chief animal products and 1960 outputs (in metric tons): meat, 162,002 (produced at city slaughter houses); wool, 47,366; mohair, 9,796; and silk cocoons, 2,444.

Mining.—Turkey's mineral production for 1961, which was about the same as for 1960, was as follows: bituminous coal, 6.4 million metric tons; subbituminous coal and lignite, 3.7 million; copper, 19,992; chromite, 524,364; iron ore, 764,484; petroleum, 414,264; and sulfur, 15,648. The monthly production rate for crude oil in mid-1961 was 41,577 metric tons, up 11,000 tons from the 1960 average. A discovery of rich uranium deposits in the Province of Manisa was reported in mid-1962.

Industrial Production.—Production of major industrial products in 1961 (in metric tons) was as follows: pig iron, 187,512; steel mill products, 303,648; cement, 2,028,000; coke, 720,000; paper, 63,360; sugar, 534,312; glass and glass products, 18,792; superphosphates, 21,192; cotton textiles, 155.0 million meters (state plants only); and woolen textiles, 4.7 million (state plants only). Electric power production totaled 2,918 million kw.-hr. in 1961, of which 51% was derived from coal and lignite, and 43% from water.

Early in 1962, Turkey ceased importing refined oil products, as the country's refining capacity was deemed large enough to meet domestic needs. By late 1962, three local refineries were in operation. In May 1962, Turkey inaugurated a $2.6 million atomic reactor, which was fueled by 4 kilograms of uranium-235 donated by the United States.

Foreign Trade.—Total exports, 1961: T£3,120.6 million (up T£1,399.4 million from 1960); imports, T£4,585.1 (up T£2,371.4 million). Exports were largely agricultural (83.3% of total 1961 exports), chiefly tobacco (T£784.7 million), fruits and nuts (T£655.4 million), cereals (T£53.9 million), and cotton (T£520.7 million). Mineral exports were valued at T£236.3 million (7.6% of total exports). Chief imports were production machinery, iron and steel products, vehicles, fuels, textile fibers, and pharmaceuticals. Turkey's major trading partners in 1960 were the United States (which supplied 27.5% of imports and took 18.8% of exports), West Germany (16.7% and 14.7%), the United Kingdom (13.2% and 8.6%), Italy (8.4% and 9.9%), and France (3.5% and 6.9%). Soviet-bloc trade accounted for 7.8% of total imports and 8.6% of exports.

Events, 1962. *Foreign Affairs.*—Turkey's active pro-Western policy was tested during the Cuban crisis of October 1962. After a quarantine of Cuba was imposed by the United States, Turkey responded immediately by announcing its complete cooperation with and support of the United States. Turkish leaders refused to consider the removal of United States-supplied missiles from Turkey as a possible concession to the Soviet Union. They contended that the missiles and United States-manned air bases in Turkey were NATO installations and therefore not subject to unilateral disposal by either the United States or Turkey. Apparently sensing the recalcitrance of the Turks, the Soviet Union dropped its demand for the dismantling of these installations in Turkey in return for Soviet withdrawal of offensive missiles and aircraft from Cuba.

Early in 1962 the Turkish press began carrying reports of widespread brigandage in the eastern provinces, in what used to be Kurdish-dominated territory. Regular army units were sent to assist local law-enforcement agencies in maintaining order. In August the Iraqi government charged Turkey with aiding the Iraqi Kurdish chief, Gen. Nullah Mustafa al-Barzani. The Iraqi claim was categorically denied by the Turks.

It soon became known that several thousand armed Iraqi Kurds of the Baradost tribe had fled to Turkey from Iraq, allegedly to escape from General Barzani. The Kurds surrendered their weapons to Turkish authorities and were apparently granted asylum. Turkey and Iraq exchanged harsh notes charging each other with border violations. Perhaps in an attempt to placate Kurdish groups in Turkey, the parliament in October permitted 55 tribal leaders who had long been exiled in western Turkey to return to their homes in the eastern part of the country.

Turkey continued to negotiate for a limited association with the European Economic Community. In July 1962 the Community agreed in principle to offer Turkey a customs union agreement, which will probably mean removal of Community tariff barriers on imports from Turkey. Turkey, however, was reluctant to offer a reciprocal reduction in import restrictions. A gradual lowering of tariffs over a 22-year period was discussed.

In September 1962 the first group of 30 United States Peace Corps volunteers arrived in Turkey.

In late November, Archbishop Makarios, president of Cyprus, came to Turkey for a state visit.

Domestic Affairs.—In November 1961, after several weeks of interparty negotiations, Ismet Inönü succeeded in forming a coalition government in which the Republican People's Party and the Justice Party each held 11 cabinet posts. On December 2 the new cabinet received a vote of confidence by the National Assembly. The new government promised to abolish the agricultural land tax, introduce rational economic planning, give priority to education, place greater emphasis on agricultural development, and continue Turkey's support for NATO and CENTO.

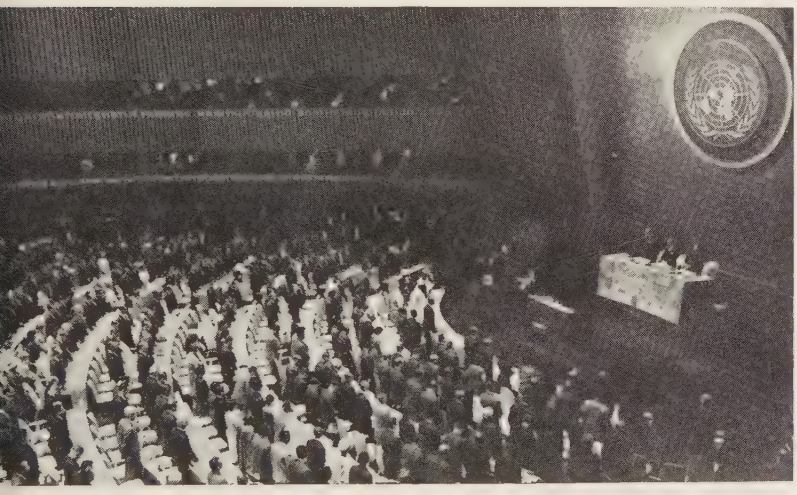
Martial law, which had been in effect in Istanbul and Ankara since the student demonstration of April 28, 1960, was lifted on Nov. 30, 1961.

On Feb. 13, 1962, a small group of army officers and military cadets under the leadership of a retired colonel, Talat Aydemir, former commandant of the Ankara War College, attempted to seize power, but the revolt was quickly suppressed without bloodshed. Although no one was prosecuted, 21 officers were retired and 13 were reassigned. On December 3, the government forced the retirement of 11 senior air force officers, ostensibly as a move to keep the military forces out of politics. It was reported that some of the retired officers had been holding secret meetings of a political nature.

In April the Justice Party demanded the resignation from the party of those ministers who signed the impending official pardon for persons responsible for the February 22 revolt, unless a date for a general political amnesty was announced. Inönü resigned on May 30, and on June 2 was asked by President Gürsel to form a new cabinet. Two weeks later he succeeded in forging a second coalition cabinet consisting of representatives of the Republican People's Party, the New Turkey Party, and the Republican Peasants Nation Party. Parliament approved the cabinet by a vote of 259 to 134. Of the 147 Justice Party members, 115 voted against approval and 32 abstained.

The Justice Party in October held mass outdoor meetings to demand a general political amnesty for jailed Democrats. Parliament on October 27 approved a resolution releasing 268 persons imprisoned since the military coup of May 27, 1960. Fifty-three persons remained in prison, including former president Celâl Bayar. The act of amnesty did much to relieve political tensions.

RICHARD D. ROBINSON,
Lecturer, Massachusetts Institute of Technology, Turkish Area Specialist and International Business Consultant.



UNITED NATIONS—As delegates stand in silence, the 17th General Assembly session opens on September 18.

UNITED NATIONS

UDALL, Stewart Lee. See biographical sketch under UNITED STATES.

UGANDA

The former British East African territory of Uganda attained independence within the Commonwealth of Nations on Oct. 9, 1962. Uganda is situated in inland east-central Africa, and is bounded on the north by Sudan, on the east by Kenya, on the south by Tanganyika and Rwanda, and on the west by the Republic of the Congo (Léopoldville). The country comprises a fertile plateau, with mountains on the eastern and western borders; desert land in the east; and Lake Victoria to the south. The total area of 93,981 square miles (including 13,689 miles of lakes) is slightly less than that of Oregon. The population at the 1959 census was 6,536,616 (mid-1961 est., 6,845,000), including 6,451,117 Africans, 71,933 Asians, 10,866 Europeans, and 1,946 Arabs. The capital is Entebbe (1959 est., 8,500); the commercial center is Kampala (60,000).

Uganda's flag has six horizontal stripes of alternating black, yellow, and red, and is inscribed in the center with a white disk bearing a colorful crested crane.

Government.—Sir Walter Coutts, who had served as governor from Nov. 30, 1961, became the first governor general of Uganda on Oct. 9, 1962. Uganda achieved internal self-government on March 1, 1962, and Benedicto Kiwanuka, leader of the ruling Democratic Party, was installed as the country's first prime minister. He resigned on April 27 after his party's defeat in general elections, and was succeeded as prime minister on May 1 by Milton Obote, president of the Uganda People's Congress (UPC). In the elections of April 25, 1962, the UPC won 37 of the 82 directly elected seats in the 91-member National Assembly; the Democratic Party received 24 seats; and the Kabaka Yekka (the ruling group in the Kingdom of Buganda that was aligned with the UPC), 21 seats. The UPC on May 9 also received 6 of the 9 specially elected seats in the Assembly, and the Kabaka Yekka was granted the remaining 3 seats. The Kabaka Yekka had won 65 of 68 elected seats in the Buganda Lukiko (legislature) on Feb. 22, 1962; the Lukiko, which assists the ruler, or kabaka, selects Buganda's 21 representatives to the National Assembly.

Education.—About one fourth of all school-age children attend school. The government aims to develop common schools open to all races. Number of schools (with

enrollments, 1960): 5,956 primary (531,752); 298 secondary (31,285); 36 teacher-training (3,281); and 13 technical (1,540). The University College of East Africa at Kampala had 789 students in 1961.

Finance.—Government revenue, fiscal year ending June 30, 1962: £17,648,610 (£20,587,402 in fiscal year 1961); expenditure, £18,606,180 (£21,812,346). Public debt, mid-1960: £16,933,000.

Transportation and Communications.—Railways connect Kampala with Kenya and with Lake George in western Uganda. The road network aggregates about 11,300 miles, including 2,964 miles of main highways. East African Airways and six foreign airlines serve Entebbe airport. Passenger cars: 25,700 (1960); commercial vehicles, 5,200 (1960); telephones, 13,596 (1960); radio receivers, 90,000 (1959).

Agriculture.—Uganda is the largest producer of coffee of the Commonwealth countries, and is an important supplier of cotton. Chief crops (metric tons, 1961): coffee, 91,100 (down 21%); seed cotton, 215,000 (up 2%); sugar, 95,500 (up 2%); leaf tobacco, 7,000 (up 37%); and tea, 5,000 (up 9%). Exports of hides and skins totaled 63,400 cwt. in 1961; and of timber, 194,000 cubic feet.

Manufactures and Minerals.—National income, 1960: £152 million (up 1.5% from 1959). Manufactures are principally processed foods. Chief minerals are copper (13,300 metric tons produced in 1961), gold, tin, wolfram, and lead. Electric power, 1961: 434 million kw.-hr. (up 9% from 1960).

Foreign Trade.—Total exports, 1961: £41.3 million (down 4% from 1960); imports, £26.5 million (up 2%). Coffee and cotton account for about 80% of annual export value; chief imports include textiles, machinery, base metals, vehicles, and fuels. Uganda has a common economic customs union with Kenya and Tanganyika, and its trade is mainly with other Commonwealth countries.

Events, 1962.—Uganda attained internal self-government on March 1 and complete independence from Great Britain on October 9. Independence celebrations in Kampala were attended by representatives of 70 nations, including the Duke of Kent, who represented Queen Elizabeth II, and Senator Benjamin A. Smith, 2d, of Massachusetts, who was President Kennedy's personal representative.

The Uganda government's first decision as an independent country was its refusal to accord diplomatic recognition to the Republic of South Africa and the Federation of Rhodesia and Nyasaland because of the racial policies of those countries. Uganda was admitted to the United Nations on October 25.

The new African nation is unique in having no pressing racial conflicts to settle and in having a working multiple-party political system. Nevertheless, Uganda is faced with serious problems, principally tribal rivalries which threaten to undermine the authority of the central government, and economic underdevelopment. Prior to independence the government ordered an amnesty for 2,500 political and other noncriminal prisoners who had been jailed by the outgoing British administration.

About two thirds of the electorate participated in general elections held on April 25 and elected a majority of candidates of the Uganda People's Congress (UPC), in alliance with the Kabaka Yekka (which means "the kabaka alone") movement in the Kingdom of Buganda, to the new National Assembly. Prime Minister Milton Obote, leader of the moderately leftist UPC, headed a 15-member coalition cabinet of 10 UPC and 5 Kabaka Yekka members who were sworn in on May 1. He succeeded Benedicto Kiwanuka, president of the opposition conservative Democratic Party, who had taken office as prime minister on March 1.

The status of Uganda's so-called "lost counties"—five counties and parts of two others in western Buganda which have been claimed by the neighboring Kingdom of Bunyora—remained unresolved in 1962. A British Commission of Inquiry recommended on May 3 that two of the counties where the population is predominantly composed of Banyora tribes be returned to that kingdom, and that the remaining counties inhabited largely by Baganda tribesmen be retained by Buganda. The kabaka (ruler) of Buganda, however, rejected the commission's recommendations. It was announced on June 30, following a constitutional conference in London, that the two disputed counties would remain as part of Bugunda but would be administered by the central government, pending a self-determination referendum to be held there within two years.

The Uganda government on March 2 adopted a five-year development plan (1962–67), based on an economic survey conducted by the World Bank. The plan emphasizes development of trade and industry at an estimated cost of £54.2 million, of which Uganda is to provide £19 million, and Great Britain, £10 million.

W. R. F.

Uganda's independence celebrations are observed on October 13 by (from the right) Governor General Sir Walter Coutts, the Duchess of Kent, and Prime Minister Milton Obote. Uganda won independence within the Commonwealth on October 9.

UNION OF SOVIET SOCIALIST REPUBLICS

The USSR has the largest contiguous territory of any nation, and ranks third in the world in population, following only Communist China and India. The Soviet population in 1962 was officially claimed to be 220,000,000. The areas and 1961 populations of the 15 Soviet republics are shown in Table 1.

Table 1—AREAS AND POPULATIONS OF THE SOVIET REPUBLICS

Republic	Area (sq. mi.)	Population (1961 est.)
Russian SFSR	6,600,000	120,000,000
Ukrainian SSR	240,000	43,091,000
Kazakh SSR	1,050,000	10,400,000
Uzbek SSR	156,000	8,665,000
Belorussian SSR	80,000	8,226,000
Georgian SSR	30,000	4,200,000
Azerbaidzhan SSR	33,000	3,973,000
Moldavian SSR	13,000	3,040,000
Lithuanian SSR	25,000	2,804,000
Kirgiz SSR	77,000	2,225,000
Latvian SSR	25,000	2,142,000
Tadzhik SSR	55,000	2,104,000
Armenian SSR	12,000	1,893,000
Turkmen SSR	187,000	1,626,000
Estonian SSR	17,000	1,221,000
Total	8,600,000	215,610,000

(Source: *1961 Yearbook of the Great Soviet Encyclopedia*, Moscow 1961.)

Of the total population, 55% are females and 45% are males, an imbalance due mainly to the great loss of males during World War II. Rural residents constitute 52% of the total population; urbanites, 48%. Despite the growth of population in Soviet Asia, 69% of the Soviet people still live in European USSR west of the Ural Mountains. Siberia contains 15% of the population; central Asia, 11%; and the Caucasus, 5%. Great Russians constitute 55% of the population, and Ukrainians, 18%; the remainder is divided among 58 ethnic groups. About 13% of the population is of Mongoloid stock, consisting of Turko-Tatars and Finno-Ugrians.

The largest Soviet cities (with 1959 populations) are Moscow, the capital (5,032,000); Leningrad (3,300,000); Kiev (1,102,000); Baku (968,000); Gorki (942,000); and Kharkov (930,000).

A Soviet decree of Jan. 15, 1962, revoked all past laws naming Soviet cities, districts, factories, railway stations, schools, etc., for the deposed Soviet leaders Lazar M. Kaganovich, Georgi M. Malenkov, Vyacheslav M. Molotov, and Kliment Y. Voroshilov. A series of decrees had previously removed the name of Stalin from similar places; for example, Stalingrad was renamed Volgograd, Stalino became Donetsk, and Stalinsk became Novokuznetsk. By June 1962, Mount Stalin (the highest peak in the USSR) had been renamed Mount Communism.

Two new territories were formed in 1962 in the Kazakh Soviet Republic: the Aktyubinsk, Guryev, and West Kazakhstan oblasts were merged to form West Kazakhstan Territory; and the Dzhambul, Kzyl-Orda, and South Kazakhstan oblasts were joined together as South Kazakhstan Territory. In November the city of Khrushchev in the Ukraine was renamed Kremges.

Government and Political Developments, 1962.— The Soviet Union is a one-party dictatorship ruled by the Presidium of the Central Committee of the Communist Party. The formal framework of government in 1962, however, was as follows:

(1) The *Council of Ministers*, consisting of Premier Nikita S. Khrushchev, 7 deputy premiers, the premiers of the 15 Soviet republics, and about 40 ministers or heads of organizations of ministerial rank. The Council of Ministers is the chief legislative and executive organ of the USSR, and is appointed by the Supreme Soviet or the latter's Presidium.

(2) The *Presidium of the Supreme Soviet*, consisting of a president (Leonid I. Brezhnev, who is the titular head of the Soviet government), 15 vice presidents (the presidents of the 15 Soviet republics), a secretary, and 16 members. It has legislative, appointive, judicial, and treaty-making powers.

(3) The *Supreme Soviet of the USSR*, consisting of two equal houses elected for four years: the Soviet of the Union, with 791 members (one deputy per 300,000 inhabitants); and the 652-man Soviet of Nationalities, which includes 25 deputies from each of the 15 Soviet republics, 11 from each of the 20 autonomous republics, 5 from each of the 8 autonomous oblasts, and 1 from each of the 10 national areas.

WIDE WORLD

Three young Westerners visiting Moscow unfurl a banner demanding an end to nuclear testing, July 13. Soviet security guard (foreground, back to camera) ordered flag folded.

Besides being governmental premier in 1962, Khrushchev was also chairman of the Communist Party Presidium and first secretary of the party Secretariat, thus personally holding the three most powerful positions in the Soviet dictatorship.

It was announced on April 26 that Andrei P. Kirilenko had been elected as a full member of the party Presidium. Leonid N. Yefremov became a candidate member in November. The Communist Party itself had 9,716,000 members in 1962. Of this large membership, over 60% had joined the party during the Stalin era, 20% were women, and 58% had no more than a grade-school education. By nationality, 63% of the party members were Russian, and 15% were Ukrainian. In class structure, 48% of the party members were classified as intelligentsia; 34%, workers; and 18%, peasants.

On March 18, elections were held for a new governmental Supreme Soviet. The Communist bloc of candidates ran for office unopposed. Of the deputies elected, 70% were newcomers. The new Supreme Soviet on April 24 reappointed Kliment Y. Voroshilov to the Supreme Soviet Presidium. Thus, of the so-called anti-party group which Khrushchev ousted from power in 1957 and severely criticized in 1961, Voroshilov was the only one who held high public office at the end of 1962.

In February the death penalty was decreed for persons who assaulted policemen, for rapists, and for government officials who accepted large bribes. During 1962 about 100 persons (many of whom had Jewish names) were executed for counterfeit-

(*Left*) Soviet officials review parade in commemoration of 45th anniversary of October Revolution, November 17. From left are Rodion Malinovsky, defense minister; Nikita Khrushchev, chairman of the Council of Ministers; Leonid Brezhnev, president of the Presidium of the Supreme Soviet; Frol Kozlov, secretary of the Communist Party; Alexei Kosygin, vice chairman of the Council of Ministers, and Dmitri Polyanski, a member of the Presidium. "Gourmet's Delight"

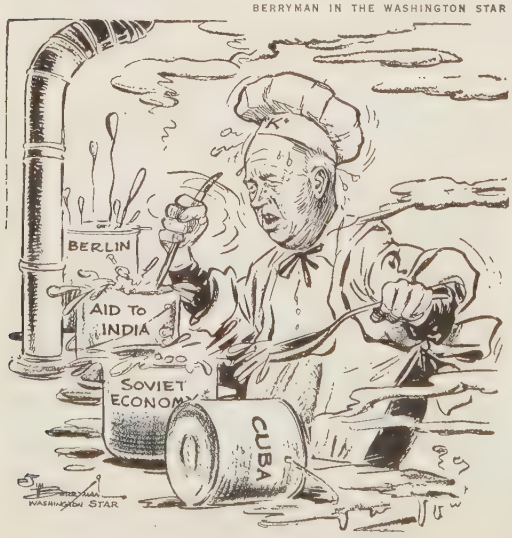
ing, speculating in gold or foreign currencies, or engaging in large-scale embezzlement.

In August and September the Ministry of Internal Affairs (MVD) in each of the 15 Soviet republics was renamed the Ministry for Defense of Public Order (MOOP). In November, Alexander N. Shelepin, a former police minister, was appointed head of a newly created Committee for Party-State Control, which will superintend both the governmental and Communist Party bureaucracy to prevent graft, waste, corruption, and inefficiency.

An even more far-reaching change in November was the division of most regional and local governments and party organizations into separate industrial and agricultural divisions, so that the average region will have two governments (rural and urban) and two similar party groups. Educational, welfare, and other routine administrative functions of government will be divided between these industrial and agricultural organs of authority. The courts and police, however, will remain united under control of the Soviet government.

"Too Many Broths Spoil the Cook"

BERRYMAN IN THE WASHINGTON STAR



It was announced on December 22 that Valerian A. Zorin had been replaced as Soviet delegate to the United Nations by Nicolai T. Fedorenko.

Education and Culture.—In 1962 the USSR had 39 million students, including 2,600,000 in colleges, 2,400,000 in technical high schools, and 1,500,000 in boarding schools. Three fifths of the college freshmen had worked two or more years before entering college. One third of the college graduates were engineers. Attending Soviet colleges in 1962 were 15,000 foreign students from 80 countries. About 5 million Soviet children were in preschool nurseries.

Though rising, the general level of education of the Soviet population was still below that of the United States. In 1962, 60% of all Soviet workers and 77% of the collective farmers had no more than a grade-school education.

The college system of the Communist Party in 1962 consisted of regional three-year schools, inter-regional and republic four-year schools, the higher party schools, and the Academy of Social Science. The colleges train party members for work in administration or propaganda.

The USSR in 1962 had 6,800 newspapers with a combined daily circulation of 67 million, and about 4,700 periodicals with an annual circulation of 1,355 million. There were 381,000 libraries with 1,900 million books. In 1962 more than 1.2 billion copies of books and pamphlets were published. In March the Communist Party warned Soviet composers to avoid formalism and modernism in their musical compositions.

Religion.—The Soviet government is officially atheistic, and disseminates atheist propaganda through the schools, press, radio, television, museums, theaters, and the arts. In 1962 the government decreed April 29, the Russian Orthodox Easter Sunday, as a workday, and April 30 as a day of rest. According to Soviet officials, the Russian Orthodox Church has 50 million adherents; the Muslim sect, 26 million (23 million Sunnites and 3 million Shi'ites); the Hebrew faith, 2,300,000; and the Baptist Church, 500,000. Other religious groups with large congregations are the Roman Catholic, Lutheran, Armenian, Gregorian, and Buddhist. In 1962, as before, the Soviet press complained that religion was still a strong force in Soviet life, and urged an intensification of antireligious propaganda. During 1962 more than 20 Pentacostal ministers and at least seven ministers of Jehovah's Witnesses were imprisoned for illegal religious activities, and an Orthodox archbishop in the Ukraine was sentenced to nine years' imprisonment for alleged embezzlement of church funds. An anti-Semitic quota system prevented many Jews from entering college or working in high government offices.

Armed Forces.—According to West German estimates, Soviet armed forces in 1962 totaled 3,570,000 men. The Soviet Army consisted of 2,200,000 men organized in 125 divisions, and had about 55,000 tanks, 30,000 mortars, and 24,000 antiaircraft rockets and guns. The Soviet Navy had 720,000 men, 1,800 surface ships, and 500 submarines, including 6 nuclear submarines and 15 underseas craft capable of firing nuclear missiles. The air force comprised 650,000 men and 15,000 planes, including 190 intercontinental bombers and 1,100 medium-range bombers. The USSR also was believed to have about 80 intercontinental missiles with nuclear warheads and 200 medium-range

missiles, all operational and located on launching pads. (See also AERONAUTICS; MISSILES.)

In 1962, Soviet military spokesmen claimed that the armed forces had 100,000 parachute troops, rocket-launching bombing planes, anti-rocket rockets, submarines with homing rockets, and hydrogen bombs ranging from 50 to 100 megatons in explosive power. DOSAAF, the civilian defense society, was ordered by the Communist Party in May to teach air raid precautions to the population, train youths who were to be inducted into the armed forces, and make its members learn and practice useful technical skills.

On April 20, 1962, Col. Gen. Ivan I. Yakubovski became commander-in-chief of Soviet troops in East Germany, replacing Marshal Ivan S. Konev. Army Gen. Aleksei A. Yepishev on May 22 replaced Marshal Fedor Golikov as head of the Chief Political Administration of the Soviet Army and Navy Gen. Aleksei I. Antonov, chief of staff of the armed forces of the Warsaw Pact alliance, died on June 18.

The USSR resumed the testing of nuclear weapons on July 22 (see ATOMIC ENERGY).

In response to the quarantine of Cuba imposed by the United States in October, all vacations of troops in the Soviet armed forces were suspended, and as of October 24 no resignations or discharges were permitted for Soviet rocket, antiaircraft, and submarine troops. The combat-readiness alert was cancelled on November 21.

Space Flight.—Soviet rocketry continued to display its prowess in 1962. Several unmanned earth satellites of the Cosmos series were launched during the year, and on October 16–17, two new multistage rockets were fired 7,450 miles from the USSR into the mid-Pacific area. On November 2 a rocket was launched into outer space in an attempt to photograph the planet Mars. The most spectacular space feat occurred in August. A spaceship carrying Major Andrian G. Nikolayev, launched on August 11, completed 64 orbits of the earth in 94 hours and 25 minutes. A second spaceship, launched on August 12 and piloted by Lt. Col. Pavel R. Popovich, made 48 orbits in approximately 71 hours. The two spaceships flew close to each other in space, and landed safely on August 15 in the USSR a few miles apart. (See also SPACE FLIGHT.)

Manpower.—Excluding collective farmers, the USSR in 1962 had 46 million manual workers, and 20 million white-collar and professional workers. About 48% of the urban labor force and 70% of the collective farmers were women. There were 400,000 scientists and science technicians, and about 20 million persons were retired and living on pensions. The trade unions had a membership of 63 million; the Red Cross and Red Crescent societies, 45 million; and consumer cooperatives, 43 million. The Young Communist League had 19.4 million members, and the Pioneers (a society for grade-school children), 18 million.

Finance.—The 1962 actual budget comprised revenues of 84.7 billion rubles and expenditures of 82.7 billion; the comparable figures for 1961 were 79 billion and 77.6 billion, respectively (the ruble equals U.S.$1.11). The state budget includes revenues and expenditures for the central government and for 50,000 regions and localities. Indirect taxes (sales tax, profits tax, and revenues from foreign trade) accounted for 91% of 1962 budget revenues. The 1962 expenditures were allocated as follows (with 1961 percentages in parentheses): industry and housing, 23% (26%); armed forces, 17% (12%); education, propaganda, and science, 15% (14%); social insurance and social security, 14% (14%); communications and trade, 8% (13%); agriculture, 10% (5%); public health and organized sport, 6% (7%); secret, 6% (8%); and administration, 1% (1%). The secret appropriation was probably for military purposes, and there were hidden military expenses in the appropriations for industry, education, science, social security, and sport.

WIDE WORLD

Examining a strain of winter wheat at an experimental farm near Moscow are biologist Trofim Lysenko (with cap), Soviet Premier Khrushchev (center) and Deputy Premier Mikoyan.

Taxation and Savings.—The Soviet population is oppressively taxed, since in 1962 more than two thirds of the national income was taken by the government in taxes. On September 22 a reduction in income taxes, which had been promised previously to take effect on October 1, was indefinitely postponed.

About 52.7 million Soviet citizens had savings accounts in government banks in 1962, and these private accounts totaled 11.7 billion rubles.

Standard of Living.—The Soviet standard of living remained low in 1962, especially outside the capital city of Moscow. The Soviet press admitted that there were shortages of meat, milk, dairy products, sugar, clothing, shoes, furniture, and housing. Many aged collective farmers received no pensions. In 1962 the retail prices of watches and clocks were reduced by 18%; sugar, 5%; and rayon cloth, 20%. The reductions were offset on June 1, however, by a 25% increase in the price of butter, and a 30% rise in the price of meat.

Transportation and Communications.—The USSR in 1962 had 75,000 miles of railways (including 10,000 miles of electrified lines), 82,000 miles of inland waterways, 16,000 miles of gas pipelines, and 940,000 miles of roads, of which only 47,000 miles were paved. Railways transported 89% of all internal freight; inland waterways, 6%; oil pipelines, 3%; and motor trucks, 2%. It was claimed that Soviet railways transported 45% of all rail freight in the world, and carried 2 billion passengers per year. Completion of the 500-mile

Soviet cosmonauts Pavel Popovich (right) and Andrian Nikolayev arrive at Moscow's Vnukovo Airport on August 18. Premier Khrushchev and Popovich's daughter are at left.

UPI

Kara-Kum Canal in southern Turkmen SSR was announced on May 1, 1962. (See also CANALS.) About 2.1 million telephones and 6 million television sets were in operation in the USSR in 1962.

Soviet civil airlines in 1962 had 3,000 passenger planes, operated 200,000 miles of domestic air routes and 50,000 miles of foreign routes, and carried about 30 million passengers. Two thirds of the domestic flights were made by jet planes. During the year, direct air service was opened from the USSR to Cuba, Ghana, Guinea, Mali, Morocco, and Sudan. Aeroflot, the Soviet airline company, operated flights to 29 foreign countries. In September the USSR displayed its new IL-62 plane, which has four jet motors, carries 182 passengers, has a speed of 560 miles per hour, and can fly nonstop from Moscow to New York. Direct radiotelegraph service was opened on August 15 between Moscow and Bamako, Mali.

Industry and Mining.—The USSR in 1962 produced about one fifth of the world's industrial output. Soviet industry was second in size only to that of the United States, and outproduced the United States in iron ore, coal, coke, diesel and electric locomotives, lumber, wool cloth, machine tools, and tractors. Soviet industry remained very unbalanced, with capital goods amounting to about three fourths of all industrial output. The actual 1961 output and preliminary estimates of 1962 production for certain selected commodities are shown in Table 2.

Table 2—USSR PRODUCTION OF SELECTED COMMODITIES

Commodity (and unit of measurement)	1961	1962
Petroleum (million metric tons)	166	186
Iron (million metric tons)	50.9	54.5
Steel (million metric tons)	70.7	75.5
Cement (million metric tons)	50.9	56
Coal (million metric tons)	510	515
Paper (million metric tons)	2.6	2.8
Machine tools (thousand units)	164	178
Motor vehicles (thousand units)	555	575
Tractors (thousand units)	264	288
Harvesting combines (thousand units)	76.3	79
Textiles (billion square meters)	6.7	6.7
Timber (million cubic meters)	236	244
Natural gas (billion cubic meters)	60.9	71.5
Radio and television receivers (million units)	6.2	6.3
Shoes (million pairs)	442	455
Electricity (billion kw.-hr.)	327	367

(Sources: *Pravda* and other Soviet publications.)

In 1962 there was a tendency to recentralize the industrial administration, which had been decentralized in 1957. The USSR was divided into about 40 large industrial areas. In each area the planning and coordination of industry was entrusted to councils which took over the functions formerly executed by more than 100 small regional economic boards. The 40 area councils, in turn, are managed by a newly created Council of the National Economy, headed by Veniamin E. Dymshits.

A major success of Soviet prospecting was the discovery in March 1962 of a large oilfield along the Lena River in eastern Siberia.

Agriculture.—In 1962 the total area under crops was approximately 520 million acres, of which about two thirds belonged to the 42,000 collective farms, and one third to the 8,270 state farms. About three fifths of the total sown area was under grain. Other major crops were potatoes, sunflower seed, cotton, sugar beets, silk, flax, and hemp. Total livestock included 81,900,000 cattle (including 36,300,000 cows), 66,400,000 hogs, and 144,100,000 sheep and goats. Collective and state farm families privately owned 29% of the cattle, 45% of the cows, 26% of the hogs, and 24% of the sheep and goats. The collective and state farms operated 1,168,000 tractors, 503,000 harvesting combines, and 790,000 trucks.

There was in 1962 a reorganization of Soviet agricultural administration. In March, committees composed of governmental and Communist Party officials were organized at the local government level to enforce strict supervision over collective and state farms. The committees usurped certain planning functions which had been entrusted to the farms since 1955. On June 1 the state purchase price for meat was raised 35% on purchases from collective farms and private gardens, and 25% on purchases from state farms.

The most drastic development in agriculture was Premier Khrushchev's condemnation in March of the crop rotation system which had existed in the USSR since the 1930's. The system allowed one fourth of the arable land to lie under fallow or hay, a practice which the premier considered wasteful. He therefore ordered that millions of acres of grassland and fallow should be sown in 1962 with corn, sugar beets, beans, and peas, which are crops that could be used primarily for animal fodder. The proposal evidently aroused some resistance among Soviet agronomists, who feared that soil fertility might be depleted. Trofim D. Lysenko resigned as president of the Soviet Academy of Agricultural Science on April 5, and two other academicians were dismissed.

Khrushchev also declared, in March, that state funds would not be diverted to agriculture at the expense of Soviet industrial development and armament, that state farms must use existing agricultural machinery and not demand more machines, and that the 6 million state farmers should be forbidden to have private gardens.

Despite the new policies the 1962 harvest was poor. Drought lowered crop yields in Siberia and north-central Asia (the new lands), and excessive rainfall caused difficulties in the European USSR. The grain harvest was claimed to be higher than the 137 million metric tons in 1961, but far below the planned 1962 estimate of 164 million. Other 1962 crop outputs, as compared with 1961, are shown in Table 3.

Table 3—USSR PRODUCTION OF SELECTED FARM COMMODITIES
(In thousand metric tons)

Commodity	1961	1962
Cotton	4,500	4,500

(Sources: Pravda; New York *Herald Tribune*.)

Foreign Trade.—Soviet foreign trade in 1962 amounted to approximately $12 billion, of which 70% was with other Communist countries, 20% with Western industrial nations, and 10% with economically underdeveloped nations. About 60% of Soviet exports were raw materials, chiefly oil, metals, and chemicals. Farm and forest products accounted for 20% of exports, and machinery, 20%. In 1962 about 700,000 Soviet citizens traveled abroad, and an equal number of foreigners visited the USSR.

In 1962 the USSR contributed about $2.7 billion in technical aid to underdeveloped countries, of which more than four fifths went to India, the United Arab Republic, Indonesia, Iraq, Syria, and Cuba. About 8,400 Soviet technicians worked on technical projects in the underdeveloped nations. The USSR signed technical aid pacts with Afghanistan, Burma, Cameroun, Ceylon, Guinea,

India, Iraq, Nepal, Senegal, Somalia, Tunisia, Turkey, and the United Arab Republic.

Foreign Affairs, 1962.—Summarized below are highlights of the year in Soviet foreign affairs. For more details on these developments, see ATOMIC ENERGY; COMMUNISM; DISARMAMENT; FOREIGN POLICY OF THE U.S.; KHRUSHCHEV; SPACE FLIGHT; UNITED NATIONS; and articles on the countries named herein, particularly CHINA, CUBA, and GERMANY.

Europe.—The USSR concluded cultural exchange agreements with Norway on February 8, Belgium on March 2, and Italy on May 30. A fisheries agreement was concluded with Norway on February 22. A Soviet-Finnish treaty signed on September 27 leased the USSR's Saimaa Canal and Maly Vysotsky Island to Finland.

The Soviet Union made many protests to western European governments during the year. In February, two Soviet protests were addressed to West Germany against the latter's arrest and trial of a Soviet trade mission official on charges of espionage. During June, July, and September, the USSR protested to the United States, Britain, and France about bombings, shootings, and other incidents along the wall dividing East and West Berlin. On August 22 the USSR abolished the office of the Soviet commandant in Berlin. In March, France withdrew its ambassador from Moscow in protest against Soviet recognition of the Algerian rebel government, and the USSR withdrew its envoy from Paris. Also in March, Albania refused the Soviet offer of food and medicine to aid victims of an Albanian earthquake.

Africa.—The USSR in 1962 concluded cultural exchange agreements with Mali, Guinea, Senegal, and Cameroun. Diplomatic relations were established with the Algerian Republic on March 19, and Dahomey on June 4. In August the USSR began to ship food to Algeria.

Asia.—The Soviet Union concluded cultural exchange pacts with Communist China, Indonesia, India, Afghanistan, Iraq, North Vietnam, and Syria. The USSR recognized newly independent Western Samoa on January 1.

An employee of the Turkish embassy and an employee of the Iranian embassy were expelled (in April and June, respectively) from the USSR for selling foreign currency and goods to Soviet citizens.

On May 8 the Soviet Union signed an arms pact with Indonesia. In June the USSR rejected Japan's proposal for unilateral cessation of Soviet nuclear testing. On July 23 the Soviet Union signed the 14-nation treaty for the neutralization of Laos. Iran on September 15 promised the USSR that foreign missile bases would not be built on Iranian soil.

Friction between the USSR and Communist China delayed the conclusion of their 1962 trade pact, which was not signed until April 20. A Sino-Soviet technical aid pact was concluded on May 13, and a scientific-cooperation agreement in June. However, China rejected in November the Soviet proposal for a truce in the Sino-Indian border war.

Western Hemisphere.—The USSR protested to Uruguay on May 16 against the bombing of a Soviet mission building in Montevideo, and to Canada on June 14 against alleged Canadian plans for nuclear armament.

Anatoly Fyodorovich Dobrynin assumed the post of Soviet ambassador to the United States in January, and Foy David Kohler became the new United States ambassador to the USSR in September. The USSR on February 10 released U-2 pilot Francis Gary Powers, and on March 8 signed a U.S.–USSR cultural exchange pact for 1962–63.

WIDE WORLD

Muscovites place signs on fence around United States embassy on October 27 in protest against quarantine of Cuba.

Soviet-American relations remained tense, however. The USSR expelled United States embassy employee Cesarina Storoni on April 16 for alleged black-marketing; *Newsweek* correspondent Whitman Bassow on August 16 for alleged misreporting; and, on charges of espionage, U.S. Assistant Naval Attaché Raymond D. Smith on October 5, United States embassy first secretary Kermit S. Midthun on October 12, and United States embassy archivist Richard Carl Jacob on November 4. The USSR protested to the United States on April 26 against the searching of Soviet ships in the Panama Canal; in June and August, about incidents at the Berlin wall; on September 4, against a U-2 flight over Sakhalin Island; and later, against United States seizure of Cuban sugar enroute to the USSR.

Cuba and the Soviet Union signed trade agreements on January 9 and May 14, a cultural exchange pact on March 30, technical aid agreements on May 8 and September 25, and an armament supply treaty on August 29. In response to the United States quarantine of Cuba beginning on October 24, the USSR at first offered to withdraw its intermediate missiles from Cuba if the blockade were lifted, but then added the unacceptable stipulation that United States missiles should be withdrawn from Turkey. The USSR proposed on October 28 that the United Nations supervise the withdrawal of Soviet missiles from Cuba, and that the United States pledge not to invade Cuban territory. The United States accepted this latter proposal, and the Soviet Union dismantled and withdrew its offensive missiles from Cuba. After the Soviet Union also agreed to withdraw its jet bombers from Cuba, the United States lifted the quarantine of Cuba on November 20.

UNITED ARAB REPUBLIC

This Middle Eastern republic was formed in 1958 by the merger of the Arab states of Egypt and Syria, but since the secession of Syria in late 1961 has comprised only the Egyptian region, situated in northeastern Africa and bordering the Mediterranean and Red seas. Its total area is 386,000 square miles, and its inhabited part—the Nile

Valley and its delta—is only 13,500 square miles. The United Arab Republic (UAR) has a population of 26,578,000 (est. 1961), which increases by some 600,000 annually. Chief cities (with 1961 population estimates): Cairo, the capital (3,346,000); Alexandria, the principal port (1,513,000); Port Said (244,000).

Government.—The government and the governing institutions underwent revolutionary changes in 1962, but the centralization of nearly all powers in the office of president has remained unchanged. More changes were envisaged by the announcement, following Syria's secession, of elections for a National Congress. In February 1962 the Congress was constituted of 1,500 elected members and of 250 members appointed by President Gamal Abdel Nasser (who has held the office since the formation of the UAR in 1958). President Nasser on Sept. 24, 1962, announced the establishment of a Presidential Council, and the transformation of the Cabinet into an Executive Council under a premier. Ali Sabry was designated premier and Mahmoud Fawzi was reappointed foreign minister on September 24. (See also below, *Events, 1962.*)

Religion and Education.—About 91% of the people are Muslims, 8% are Christians, and there are a few thousand Jews. Education is compulsory for children aged 6 to 12; the schools are government-supported and free. Nearly 500 new schools are built annually, but pressing needs call for more. Number of schools (with enrollments), 1959–60: 7,393 elementary (2,451,816); 1,155 secondary (379,441); 282 vocational and technical (96,531); 6 universities and 41 institutes of Koranic learning (90,462). There is also an Academy of Arabic Languages.

Finance.—Egypt's finances experienced severe difficulties in early 1962, but the situation was eased by a series of short-term loans. On January 9 the International Monetary Fund made available $22.4 million, and on March 9 the UAR was permitted to draw $7.5 million more. A stand-by arrangement of May 7 enabled the UAR to draw $42.5 million in currencies held by the Fund, and provided for a new exchange rate for the Egyptian pound (E£) of $2.30 (old rate, $2.87). As part of this last arrangement the United States loaned the UAR $20 million on June 1. The budget for fiscal year 1963, including the development budget and the 5-year economic plan budget, was E£2,352 million (about $5,410 million).

Transportation and Communications.—Railroads total some 3,500 miles, and there is a good highway network of more than 10,000 miles. The international airport at Cairo serves all major air carriers. The Suez Canal is the UAR's most profitable waterway, carrying 187,059,000 tons of cargo and earning more than $148 million in 1961. On May 23 the Canal Authority engaged Krupp, the West German firm, to build a new road and rail swing bridge over the canal at El-Ferdan, and to widen that part of the canal. (See also BRIDGES; CANALS.) In 1961 the UAR had 22,700 trucks and 75,600 cars. The government owns and operates the only broadcasting system and several television channels. In 1962 there were 2 million radio sets and 120,000 television receiving sets in use.

Agriculture.—Production has not kept pace with planned goals. The 1961–62 cotton crop, the chief foreign exchange earner, was estimated at 6,681,000 kantars (about 100 pounds each), down by about one third from a normal year's crop. Output of wheat in the 1961–62 crop year was estimated at 1,522,000 tons (1,430,000 tons in 1960–61); barley, 145,000 tons; and rice, 784,000 tons (1,021,000 tons in 1960–61).

Minerals and Manufactures.—Petroleum production in 1961 reached the planned goal of 100,000 barrels per day. An Italian firm was given concessions to explore oil and gas in the Nile and Arabian (Eastern) Desert area, and was to share its profits equally with the government. Iron and steel production at Helwan increased to 276,940 tons in the first half of 1962 (221,540 tons in the first half of 1961). The discovery of a seam of coal estimated at 40 million tons was made at Oyoun Moussa. More reserves of iron ore at Bahariya Oasis and radioactive phosphates in the New Valley were reported. Work on the Aswân High Dam was accelerated by the arrival of 300 more Soviet technicians. A number of projects were initiated in 1961–62 to increase the production of the weaving and spinning industries. Textile manufactures and outputs in 1961 (in metric tons): cotton, 115,000; jute, 40,100; artificial silk, 8,720; wool, 2,750; and linen, 1,400. Other manufactures include electrical appliances, bicycles, electronic equipment, coke and byproducts, and ships and barges. National income in 1961 totaled E£1.5 billion, and the per capita income increased to $170.

Foreign Trade.—There still exists a gap between the UAR's imports and exports. In 1961, imports totaled $662,390,000 ($630,000,000 in 1960); and exports, $462,644,000 ($445,000,000). Trade with the Sino-Soviet bloc decreased in 1961, when 54.3% of the UAR's trade was with Western countries (44% in 1960). Exports to the United States in 1961 rose to $28,848,000, and imports from that country totaled $130,585,000.

Events, 1962.—The year was crowded with significant events portending revolutionary political, social, and economic changes. Late in 1961, President Nasser had announced his plan for reorganizing the government through the popular election of a National Congress representing "genuine popular forces—peasants, workers, artisans, industrialists, etc." On January 27 he decreed February 5–24 as election days, when voting for 1,500 members representing various organizations took place. On February 24 the president named 250 additional members to the National Congress of Popular Forces.

At the opening of the Congress on May 21, President Nasser presented a National Charter "containing a political, economic, and social program for the UAR." He called for the formation of an Arab Socialist Union and promised that elections for a National Assembly would be held soon. On June 30 the Congress approved the Charter, and on September 24 the president announced the reorganized government, in which authority was divided. The new government comprised the president, the Presidential Council of 12 members, and an Executive Council of 25 cabinet ministers.

On the economic and social fronts the government pushed its nationalization plans into new areas. Foreign-owned agricultural land totaling about 140,000 acres, owned mainly by Greeks and Italians, had been nationalized on Dec. 23, 1961; foreign-owned properties thus nationalized were valued at E£500 million. On February 1 many export, insurance, and transportation firms were nationalized, as were 77 bakeries in Cairo and a number of small flour mills. On April 28 most of the property of the Greek community, valued at E£120 million, was confiscated. In September the government assumed 50% capital shares in all shipping and ship-repairing firms.

The first distribution of profits from nationalized firms, which shared 25% of their profits with their employees, took place on May 1. It was decreed on May 5 that every government employee would receive a bonus "equal to 10 days' pay." Under these socialist measures about E£15 million was distributed to some 1,500,000 persons.

In celebration of the 10th anniversary of the Egyptian Revolution, UAR armed forces on July 21 fired rockets from a launching site near Cairo, and President Nasser claimed that rockets were in "full-scale production." (See also MISSILES.) Four days later he formally opened a new jet aircraft factory in Cairo.

While the drive for Arab socialism was in full swing, the United Arab Republic suffered a financial crisis, partly because of large payments of premiums on imports and of heavy subsidies on

Gamal Abdel Nasser, born in Alexandria, Egypt, on Jan. 15, 1918, was the son of a postal worker and grew up in the village of Beni Mor in Upper Egypt. A professional soldier since 1938, he was the moving force in the revolution that overthrew the rule of King Faruk in 1952. As prime minister (1954) and president (1956), he led Egypt's efforts at industrialization and land distribution. In 1955 he turned to the Soviet Union for military equipment and in 1958 signed an agreement with the USSR for the construction of a high dam at Aswân. After nationalizing the Suez Canal in 1956, he gained a diplomatic triumph by obtaining the support of the United States and the Soviet Union against the British-French-Israeli invasion of Egypt later that year. A leading proponent of Arab unity, he brought about the union of Egypt and Syria under the United Arab Republic in 1958, but in 1961 conceded the withdrawal of Syria from the union. Opposition to his self-asserted role as leader of the pan-Arab movement has led to the deterioration of relations between the UAR and neighboring countries in recent years, culminating in a violent denunciation of Nasser by Syria at a special meeting of the Arab League in August 1962.

Work on the Aswân High Dam in the United Arab Republic entered the third year in 1962 under the guidance of Soviet Union technicians. Excavation for the diversion channel outlet is pictured at right.

THE TIMES, LONDON

exports. The situation was adjusted through a series of international loans (see above, *Finance*). Trade and economic cooperation agreements also helped.

An agreement with the Soviet Union on January 27 provided for Soviet economic aid of E £ 13 million. On March 15 a trade and payments agreement for 1962–65 was signed with Bulgaria. A similar trade agreement totaling 150 million rubles was signed with the USSR on June 23. On July 5 an economic cooperation agreement with Poland assured the delivery of industrial plants and equipment valued at $20 million. A group of West German banks agreed on September 20 to advance credits of DM80 million ($20 million), and pledged an equal amount for development aid.

Perhaps more important than any or all of these trade agreements, however, was the amount of aid and loans granted by the United States. On February 10 an agreement between the United States and the United Arab Republic assured the delivery of 200,000 tons of wheat and 50,000 tons of soya bean oil, together valued at $32 million. Ten days later a United States grant of $40 million for the construction of 49 silos was announced. By another agreement of May 10 the UAR was given 400,000 tons of wheat and wheat flour valued at $28 million. It was reported that the United States also had pledged about $100 million annually to the UAR for the next five years.

The UAR's relations with many Arab countries deteriorated. Her relations with the Sino-Soviet bloc were well balanced. The UAR enhanced its standing with neutralist countries, and maintained good relations with the West.

Ties with Yemen had been broken by the dissolution of the Union of Arab States on Dec. 26, 1961. At that time President Nasser had attacked the imam of Yemen, King Hussein of Jordan, and King Saud of Saudi Arabia as "reactionaries." Early in January, Saudi Arabia refused exit to 71 Egyptian printers who quit their jobs in Jidda. The UAR retaliated on January 25 by forbidding the departure of Saudi Arabians without special permits. In August, Saudi Arabia refused to accept the traditional Egyptian gift *Kiswa,* the embroidered carpet sewn in Cairo and conveyed annually by Egyptian pilgrims to Mecca. The UAR accused King Saud of bribing plotters to assassinate President Nasser on the 10th anniversary celebration of the Egyptian Revolution.

Relations with Syria, at times friendly, were strained in July because Syria charged that the UAR was "instigating disorders and supporting subversion" in Syria. Syria's formal complaint to the Arab League Council was aired in late August at a Council meeting in Shtoura (Lebanon). The other Arab members seemed sympathetic to the Syrian view, whereupon the UAR delegation on August 28 walked out of the meeting, and President Nasser threatened to withdraw from the League. The Council promptly halted further discussion of the Syrian charges.

The UAR on September 29 became the first Arab nation to recognize the newly established Yemeni Republic, and on November 10 the two countries signed a joint defense agreement. The UAR sent an estimated 12,000 troops to support the republican government in the civil war that ensued in Yemen, but on December 19 the UAR agreed to withdraw its troops from the country in return for United States recognition of the Yemeni Republic.

Relations between the UAR and other neutralist countries improved. On February 4, Yugoslav President Tito conferred in Cairo with President Nasser on political and economic cooperation between the neutralist states. The Economic Committee of the "Casablanca group" (Ghana, Guinea, Mali, Morocco, the UAR, and Algeria) met in Cairo on April 2 and agreed to form an African Common Market. The same powers held a second conference on June 5 in Cairo at the heads-of-state level. On July 9–18 a conference of 36 neutralist states was held in Cairo on problems of economic underdevelopment.

An agreement for cooperation in the development of atomic energy was signed by the UAR and India on September 22. President Nasser offered on October 31 to mediate in the Sino-Indian border dispute, but was rebuffed by Communist China. On November 21 he approached a group of neutralist states about providing aid to India.

The UAR's shifting attitude toward the West did not change materially; relations with certain states improved, but relations with Greece were strained. Four members of the French Property Commission in Cairo were put on trial (January 15) on charges of plotting to assassinate President Nasser, and of smuggling currency out of the country, but on April 7 they were freed, apparently in return for French readiness to conciliate Algerian nationalists. President Kennedy's special representative, Chester W. Bowles, visited Cairo for five days in early February, and subsequent to this visit United States aid and loans to the UAR were increased. On August 21 a pact was signed with Great Britain settling the question of British property seized by the UAR in 1956; Britain made a loan of $2 million to "assist" the UAR in meeting payments.

UNITED CHURCH OF CANADA

At the end of 1961, the adult communicant membership of the United Church was 1,036,936; its congregations listed a total of 2,609,415 persons under their pastoral care, and a total constituency of nearly 4,000,000. Total contributions amounted to $60,280,270, of which $9,652,017 was for the wider work of the church and $3,000,000 for church extension, colleges, and benevolences.

The year 1962 saw the launching of a new curriculum in Christian education, the preparations for which had taken several years. The first textbook issued, *The Word and the Way,* is being used by parents and adult groups as basic preparation. The Berkeley Studio, audio-visual center for the United Church, has won high awards for its movies and radio programs. The Twentieth General Council, meeting in London, Ontario, in September 1962, considered important reports regarding long-range planning for the church, Christian marriage and divorce, international affairs, ordination, and "the renewal of the church."

ERNEST E. LONG,
Secretary of the General Council.

UNITED CHURCH OF CHRIST

July 4, 1962, marked the first anniversary of the constitution adopted by the United Church of Christ, a union of the Evangelical and Reformed Church and the Congregational Christian churches. In April, even before the new denomination had completed the staffing and structuring of its departments, representatives of the church met in Washington, D.C., with leaders of the Protestant Episcopal Church, the Methodist Church, and the United Presbyterian Church in the U.S.A., to discuss a possible union. Similar negotiations have been held with the International Convention of Christian Churches (Disciples of Christ).

Formal merger of the churches' youth and adult laymen's organizations took place in 1962. The Evangelical and Reformed Churchmen's Brotherhood and the Congregational Christian Laymen's Fellowship joined to form the Churchmen's Fellowship. Youth groups of the two merged churches voted to disband in favor of a new plan which emphasizes integration of the teen-agers into the total life of the church.

Final work on a new Sunday Church School curriculum was completed in 1962. The curriculum is built around six unifying themes, and Biblical emphasis is on both the historical context of the Scriptures and their relevance to contemporary situations. An extensive program of leadership education is under way to help prepare Sunday School teachers of local churches to use the new materials effectively. A National Conference on Christian Education conducted by the denomination at Purdue University in August drew 4,000 ministers and teachers from local churches across the nation. Smaller regional and local training sessions have also been held.

The church has 525 missionaries and fraternal workers engaged in relief, rehabilitation, social service, education, medical work, and evangelism in 25 countries. During 1962 its United Church Board for World Ministries initiated a program of cooperation between United Church laymen working abroad and foreign church leaders and missionaries.

The United Church of Christ has a membership of 2,015,770 in 6,755 churches.

COMMITTEES

General: Composed of 21 members as follows: General Assembly president; the 13 General Assembly vice presidents (chiefs of delegation or their deputies of Australia, Belgium, China, Colombia, France, Guinea, Haiti, Jordan, Malagasy Republic, Rumania, the USSR, the United Kingdom, and the United States); and the chairman of the following 7 committees, which are composed of representatives of all member countries:

First (Political and Security): Omar A. H. Adeel (Sudan).

Special Political: Dr. Leopoldo Benítes (Ecuador).

Second (Economic and Financial): Bohdan Lewandowski (Poland).

Third (Social, Humanitarian and Cultural): Nemi Chandra Kasliwal (India).

Fourth (Trusteeship): Col. Guillermo Flores Avendãno (Guatemala).

Fifth (Administrative and Budgetary): Dr. Jan Paul Bannier (Netherlands).

Sixth (Legal): Prof. Constantine T. Eustathiades (Greece).

THE SECURITY COUNCIL

(Membership ends on December 31 of the year noted; asterisks indicate permanent membership.)

Brazil (1964)
China*
France*
Ghana (1963)
Morocco (1964)
Norway (1964)
Philippines (1963)

(2) Security Council

Congo.—On Jan. 30, 1962, the Security Council met to take up a Soviet request that it consider the situation in the Congo and the question of the implementation of its resolution of Nov. 24, 1961, on the problem of the integration of Katanga Province. The request was rejected (7–2, with 2 abstentions), and, despite Soviet objections, a United States proposal for adjournment was adopted by the same vote.

During the year, Acting Secretary General U Thant (q.v.) transmitted a series of reports from the officer in charge of the UN Operation in the Congo (ONUC) on developments relating to the application of the council's resolutions of February 21 and Nov. 24, 1961. The report submitted on Nov. 26, 1962, outlined steps for the implementation of the Plan of National Reconciliation, which U Thant had submitted to the central government of the Congo in August and, with its agreement, to the government of President Moïse Tshombe in Katanga. The main elements of the plan were elaboration of a federal constitution; division of revenue and foreign exchange earnings between the central and provincial governments; unification of the currency; integration and unification of all military, paramilitary, or gendarmerie units into a national army and gendarmerie structure; withdrawal of all provincial representatives and diplomatic or consular missions not serving under the authority of the central government; proclamation of a general amnesty; and reconstitution of the central government to provide for representation of all political and provincial groups.

The plan was accepted by Congolese Premier Cyrille Adoula on August 23 and by Tshombe on September 3. Steps taken to implement the plan included the drafting of a federal constitution and the establishment of a Military Commission, a Revenue Commission, and a Commission on Foreign Exchange. It soon became apparent, however, that the Katangan authorities, while stating that they agreed in principle with the plan, were reluctant to put it into effect. The ONUC report of November 26 therefore recommended a course of action that would allow the authorities in Katanga 10 days in which to agree to the plan's proposals. If they failed to do so, governments would be requested to impose an economic boycott by refusing to import Katangan copper and cobalt. Despite warnings and inducements to adhere to the plan, President Tshombe remained recalcitrant, and late in December fighting broke out between United Nations and Katangan forces.

Cuba.—The question of Cuba came before the Security Council in several contexts in 1962. Meeting on February 27, the council decided not to include in its agenda a Cuban complaint that the United States had promoted enforcement action through regional organizations, in violation of the UN Charter, "as a prelude to a large-scale invasion of Cuba" (there were only 4 votes for inclusion and 7 abstentions).

On March 14, the council took up a Cuban request that it consider asking the International

UNITED NATIONS

UN Secretary General U Thant (left) and General Assembly President Zafrulla Khan of Pakistan confer on October 11.

Court of Justice for an advisory opinion on legal decisions taken at the Punta del Este Conference in January. Cuba, a nonmember of the council, was invited to participate in the meetings. The question was discussed in seven meetings between March 14 and 23, when a Cuban draft resolution was rejected (7–2, with 1 abstention and 1 not participating).

In four meetings held on October 23–25, the council heard complaints by the United States, Cuba, and the USSR on the crisis that had developed following United States disclosure of the secret presence in Cuba of Soviet "missiles and other offensive weapons" and steps initiated by the United States to "remove the existing threat to the security of the Western Hemisphere and the peace of the world." On October 24, U Thant reported that he had sent messages to President John F. Kennedy and Premier Nikita S. Khrushchev, requesting them to take steps to resolve the crisis. He also made an appeal to the president and premier of Cuba. In his reply, which was read to the council by the United States representative,

Adlai E. Stevenson, on October 25, President Kennedy said that he deeply appreciated the spirit that had prompted U Thant's message. "As we made clear in the Security Council, the existing threat was created by the secret introduction of offensive weapons into Cuba, and the answer lies in the removal of such weapons," he asserted. The president then noted that U Thant had made "certain suggestions and invited preliminary talks to determine whether satisfactory arrangements can be assured." He said that he had instructed Ambassador Stevenson to discuss these arrangements promptly with the acting secretary general. Premier Khrushchev stated in his reply, which was read to the council by the Soviet representative, Valerian Zorin, that he welcomed U Thant's initiative and understood his concern about the situation in the Caribbean, since the Soviet government also considered the situation as "dangerous" and requiring immediate intervention by the United Nations. On motion of the United Arab Republic, the council adjourned to await the results of talks between representatives of the parties concerned and U Thant.

Although Cuba did not agree to inspection on its soil, the crisis was resolved when the USSR dismantled the bases and removed the missiles (as announced on November 8) and withdrew its bombers from the island (as announced on December 6).

Kashmir.—At the request of Pakistan, the council met on Feb. 1, 1962, to consider the question of Kashmir. After hearing statements by representatives of India and Pakistan, it deferred further consideration of the matter to a later date. The question was considered again in 10 meetings between April 27 and June 22, when a draft resolution of Ireland, urging the two countries concerned to enter into negotiations as soon as possible and to adopt measures to create a favorable atmosphere, was vetoed by the USSR. (The vote was 7–2, with 2 abstentions.)

Palestine.—The council considered complaints from Syria and Israel on border incidents in eight meetings held between March 28 and April 9, 1962. It then adopted (10–0, with 1 abstention) a United Kingdom–United States draft resolution reaffirming its resolution of Jan. 19, 1956, "which condemned Israeli military action in breach of the General Armistice Agreement, whether or not undertaken by way of retaliation," and declared the Israeli attack of March 16–17, 1962, a "flagrant" violation of that resolution. In addition, the council called on Israel to refrain from such action in the future.

(3) Economic and Social Council

The 33d session of the Economic and Social Council (ECOSOC) met in New York on April 3–18, 1962, while the 34th session met first in Geneva on July 3–August 3, and resumed its meetings in New York on December 18–20. Meetings were also held by many of the council's commissions and committees.

The 33d session considered reports from the UN Children's Fund (UNICEF), International Monetary Fund (IMF), International Bank for Reconstruction and Development (IBRD), International Finance Corporation (IFC), International Development Association (IDA), Committee for Industrial Development, and other bodies. It adopted resolutions on international economic cooperation, nonagricultural resources, the World Food Program, the Water Resources Development Center, a projected Conference on International Travel and Tourism, the Latin American Institute for Economic and Social Planning, establishment of an African Development Bank, and revision of the agreement between the United Nations and the UN Educational, Scientific and Cultural Organization (UNESCO).

The 34th session passed resolutions on reports of intergovernmental organizations related to the United Nations, long-term projections, African educational development, public administration, the UN Development Decade, the convening of a Conference on Trade and Development, provision for safeguarding and promoting the interests of children and youth, commodity and trade problems of developing countries, the economic and social consequences of disarmament, the financing of economic development, the proposed establishment of a UN Capital Development Fund, promotion of the flow of private capital, expansion of United Nations activities in industrial development, international commodity problems, new sources of energy, decentralization of United Nations economic and social activities and strengthening of the regional economic commissions, and technical cooperation. The council also approved resolutions on coordination of the results of scientific research, international cooperation in seismological research and in the peaceful uses of outer space, planning for balanced economic and social development, housing and urban development, social services and development planning, strengthening of the work of the United Nations in the social field, land reform, advisory services in human rights, international control of narcotic drugs, technical cooperation in narcotics control, and promotion among youth of ideals of peace, mutual respect, and understanding between peoples.

When the council resumed its discussions in December, it approved the Expanded Program of Technical Assistance for 1963. It refused to expel Spain and Portugal from the Economic Commission for Africa.

Commission on Human Rights.—Meeting in New York on March 19–April 14, the 18th session of the commission passed resolutions and considered progress with regard to such matters as advisory services in human rights, periodic reports on human rights, portions of the draft Principles on Freedom and Nondiscrimination in the Matter of Religious Rights and Practices, strengthening of information media in less-developed countries, formation of national advisory committees on human rights, and the right of everyone to be free from arbitrary arrest, detention, and exile.

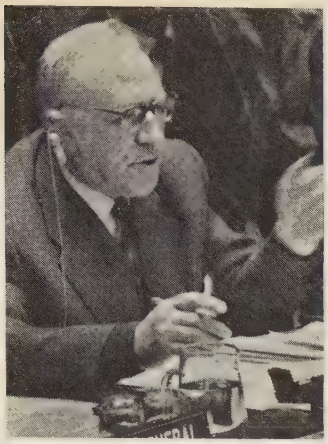
Commission on International Commodity Trade.—The 10th session of the commission, held in Rome on May 15–23, considered financial measures to offset fluctuations in the export income of primary producing countries, the position of synthetics in the measurement and analysis of international markets for primary commodities, and fluctuations in primary commodity markets.

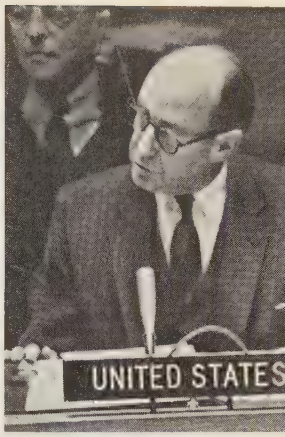
Commission on Narcotic Drugs.—The 17th session of the commission met in Geneva on May 14–June 1, and reviewed reports and passed resolutions on the implementation of narcotics treaties and international control, illicit traffic, drug addiction, programs of scientific research on opium and cannabis, the question of the coca leaf and of synthetic and other new narcotic drugs, the production and use of barbiturates, and preparations for the coming into force of the Single Convention on Narcotic Drugs.

Commission on the Status of Women.—Meeting in New York on March 19–April 6, the 16th session of the commission considered reports and passed resolutions on the political rights of women, equal pay for equal work, economic rights and opportunities for women, the access of women to education, the status of women in private law, and the advancement of women in developing countries.

Committee for Industrial Development.—The 2d session of the committee, which met in New York on March 5–28, adopted recommendations on the planning of industrial development, training and management, the mobilization and utilization of domestic financial resources, the role of small-scale industries, and the transfer of industrial technology to newly developing countries. It also requested ECOSOC to consider the urgent problem of adequate staffing in the Secretariat for industrial development purposes.

Economic Commission for Africa (ECA).—The 4th session of the commission met in Addis Ababa on February 19–March 3, and considered reports on the economic situation in Africa, economic and social development, trade and





WIDE WORLD

commodity problems, social welfare and community development, African statistics, transportation, training, and international assistance. The commission recommended to ECOSOC that Spain and Portugal be deprived of their membership in ECA, and that South Africa be deprived of its membership until such time as it put an end to its policy of racial discrimination. In addition, resolutions were adopted on such matters as natural resources and industrialization, African educational development, timber trends, the proposed establishment of an African Planning and Development Institute, aid to members on technical assistance projects, consolidation of information media, and subregional development of an integrated transportation and communications system.

Economic Commission for Asia and the Far East (ECAFE).—The 18th session of the commission, meeting in Tokyo on March 5–19, passed resolutions on world trade as it affects the region, measures to facilitate industrial investment, the proposed establishment of an Asian Institute for Economic Development, efforts to complete the Asian highway network, strengthening of ECAFE's activities in social development, and the development of tourism as a source of foreign exchange.

Economic Commission for Europe (ECE).—The 17th session of the commission met in Geneva on April 24–May 11, and adopted resolutions on an analysis of the results achieved by the commission in 15 years, techniques of distribution of consumer goods, the exchange of abstracts of documents relating to applied economics, and the development of standardization and its relation to the expansion of international trade.

Economic Commission for Latin America (ECLA).—The ECLA Committee of the Whole held its 8th session in Santiago, Chile, on February 14–16; met there in special session on March 21; and held its 9th session in New York on June 6–7. Its chief business was the formation of a Latin American Institute for Economic and Social Planning.

Social Commission.—Meeting in New York on April 30–May 11, the 14th session of the commission adopted resolutions on planning for balanced economic and social development, housing and urban development, the needs of rural communities, administration of the United Nations social services program, and strengthening of the work of the United Nations in the social field.

Special Fund.—At its 7th session, held in New York on January 9–15, the Governing Council authorized the expenditure of $42.8 million to assist 48 new economic development projects in 38 less-developed countries and territories. With counterpart contributions of $67.7 million made by the governments receiving assistance, the cost of new projects totaled $110.5 million. The 8th session of the council, meeting in New York on May 21–29, authorized $36.9 million for 41 new projects in 35 countries and territories. These allocations brought total Special Fund commitments to $210,254,900 for assistance to 246 projects in 71 countries and territories. Including counterpart contributions, the projects were valued at $496 million.

Statistical Commission.—The 12th session of the commission, held in New York on April 24–May 10, discussed and passed resolutions on the extension of United Nations statistical publications, the improvement of comparability of data from countries having different economic and social systems, systems of industrial statistics, statistics of the financial accounts of enterprises, country practices in national accounting, the methodology and evaluation of continuous population registers, developments in demographic statistics, reports on the 1960 world population and housing census program, the development of statistics for social programs, balance-of-payments statistics, and external trade statistics.

Subcommission on the Prevention of Discrimination and Protection of Minorities.—Meeting in New York on January 8–February 2, the 14th session of the subcommission examined and adopted for transmittal to the Commission on Human Rights draft principles designed to ensure exercise of political rights by everyone without discrimination. These General Principles on Freedom and Nondiscrimination in the Matter of Political Rights include articles on the right of all peoples to self-determination, political rights of nationals, freedom of opinion and association, universality of suffrage, equality of suffrage, the secrecy of the vote, the periodicity of elections, the genuine character of elections and other public consultations, access to elective and nonelective public office, constitutional guarantees, and recourse to independent tribunals.

UN Coffee Conference.—The conference, which was held in New York on July 9–August 25 and on September 28, was attended by 58 nations as participants and by 13 as observers. At its close, 24 governments signed a five-year agreement designed to raise the purchasing power of coffee-exporting countries by keeping prices at equitable levels and by increasing consumption. In addition to approving

(*Left*) Premier Cyrille Adoula of the Congo (right) confers at the United Nations, February 2, with Secretary General U Thant. (*Right*) The Stanley Monument in Léopoldville forms backdrop for Nigerian soldier, a member of the UN Force in the Congo.

WIDE WORLD; UNITED NATIONS

the text of the agreement, the conference authorized the secretary general to convene an International Coffee Council. The agreement was to come into force as soon as it had been ratified by 20 exporting countries furnishing at least 80% of coffee exports in 1961 and by 10 importing countries accounting for at least 80% of the imports in that year.

UN Technical Conference on the International Map of the World on the Millionth Scale.—The conference, which was held in Bonn on August 6–22, was attended by cartographers from 43 countries. It unanimously adopted revised specifications designed to meet modern needs in the field of economic planning. In addition, it approved resolutions to help ensure that these specifications would be put into practice.

UN Wheat Conference.—The conference, which was held in Geneva on January 31–March 10, was attended by 49 nations as participants and by 6 as observers. It negotiated a new three-year International Wheat Agreement designed to provide a measure of stability to the prices of wheat and flour entering into international trade. Upon receipt of a sufficient number of ratifications, it was to enter into force on the expiration of the previous agreement on July 31, 1962.

(4) Trusteeship Council

The 28th session of the Trusteeship Council met on January 10–11, and the 29th session on May 31–July 20, 1962, in New York. Two trust territories achieved independence during the year. Western Samoa became independent on January 1, and the trusteeship agreement for Ruanda-Urundi was terminated on July 1, when Rwanda and Burundi emerged as sovereign states. Of the original 11 territories in the trusteeship system, only 3 remained: Nauru (administered by Australia, New Zealand, and the United Kingdom); New Guinea (administered by Australia); and the Pacific Islands (administered by the United States).

The 28th session postponed consideration of an annual report from Ruanda-Urundi, and requested the Secretariat to prepare a paper on the procedures of the council in view of the decrease in its work load. The 29th session examined reports from the administering authorities and considered petitions on the Pacific Islands, Nauru, and New Guinea, as well as the reports of a visiting mission to Nauru and New Guinea. It was decided in future to hold only one council meeting a year.

(5) International Court of Justice

Following oral hearings and the final submissions of the parties in March 1962, the court delivered its judgment in the case concerning the Temple of Preah Vihear (*Cambodia* v. *Thailand*) on June 15. By a vote of 9 to 3, it found that the temple was situated in Cambodian territory, and that Thailand was under an obligation to withdraw any forces or guards stationed at the temple or in its vicinity in Cambodian territory. The court also found (7–5) that Thailand was obliged to restore to Cambodia any sculpture, fragments of monuments, or similar material that its authorities might have removed from the temple.

In a resolution of Dec. 20, 1961, the General Assembly had requested an advisory opinion of the court on the financial obligations of member nations. Written statements were submitted to the court by March 16, 1962, and oral hearings were conducted on May 14–21. On July 20, the court declared (9–5) that in its opinion the expenditures authorized in the General Assembly and Security Council resolutions listed in the assembly's request were "expenses of the Organization" within the meaning of Article 17, paragraph 2, of the UN Charter. In essence, this decision meant that members were legally obligated to pay their portion of expenses for the maintenance of ONUC and the UN Emergency Force in the Middle East (UNEF). (See also International Law.)

On June 19, the Belgian government instituted new proceedings before the court in its dispute with Spain concerning the Barcelona Traction, Light, and Power Company, Ltd. The case, which had first been brought to the court in 1958, was withdrawn in 1961 when it appeared that negotiations were possible. When these failed, Belgium reopened the case. In the case concerning Northern Cameroons (*Cameroun* v. *United Kingdom*), the United Kingdom filed a preliminary objection to the jurisdiction of the court on September 14. On October 2–22, oral hearings were held on the question of the court's jurisdiction in the South West Africa cases (*Ethiopia* v. *South Africa* and *Liberia* v. *South Africa*). The court ruled (8–7) on December 21 that it had authority to hear the cases.

(6) General Assembly

The resumed 16th session of the General Assembly met in New York from January 15 through February 23, and from June 7 through June 28, 1962. The 17th session also met in New York, from September 18 through December 20.

Elections.—On October 17, the Philippines was elected to a one-year term on the Security Council (after a deadlock in the 16th session of the General Assembly, Rumania had been elected to this seat with the understanding that it would resign at the end of a year's service, and that the Philippines would complete the term). At the same time, Brazil, Morocco, and Norway were elected to two-year terms on the Security Council; Argentina, Austria, Czechoslovakia, Japan, the USSR, and the United Kingdom, to three-year terms on ECOSOC; and Liberia, to a three-year term on the Trusteeship Council.

Membership.—Acting on favorable recommendations by the Security Council, the assembly on September 18 admitted Jamaica, Rwanda, Burundi, and Trinidad and Tobago to membership in the United Nations by acclamation. Algeria was admitted on October 8, and Uganda on October 25 (both by acclamation). The total membership of the organization thus rose to 110.

Secretary General.—Following agreement in a private meeting of the Security Council on November 30, the assembly on the same day, by secret ballot, elected (109–0, with 1 member absent) U Thant secretary general for a term expiring on Nov. 3, 1966. Since he had been elected acting secretary general on Nov. 3, 1961, to fill the vacancy caused by the death of Dag Hammarskjöld, he was scheduled to serve a full five-year term, as provided for the office in the UN Charter.

West New Guinea.—On Sept. 21, 1962, the assembly took note of an agreement resolving the 13-year-old dispute between Indonesia and the Netherlands over West New Guinea (West Irian) and authorized the secretary general to carry out the tasks entrusted to him under its terms. The agreement, which was signed at UN Headquarters on August 15, provided for the transfer by the Netherlands of administration of the territory to a UN Temporary Executive Authority (UNTEA), established by and under the jurisdiction of the secretary general. After May 1, 1963, administration was to be transferred to Indonesia. In addition, the agreement provided for exercise of the right of self-determination by the people of West New Guinea before the end of 1969. Hostilities between Netherlands and Indonesian forces were to cease at midnight, Greenwich time, Aug. 18, 1962. On September 7, Brig. Indar Jit Rikhye, sent to the territory by U Thant to supervise the cessation of hostilities, reported that most of his tasks had been completed. Administration of the territory was transferred to UNTEA on October 1,

and on October 22, Dr. Djalal Abdoh of Iran was appointed United Nations administrator.

Other Political and Security Matters.—On October 26, the assembly adopted (66–0, with 11 abstentions) a resolution taking note of the report of a commission of investigation into the circumstances of the deaths of Dag Hammarskjöld and members of his party in 1961 (the report, while raising some unanswered technical questions, found no overt causes for the plane crash in which they were killed). The membership of Communist China was rejected (56–42, with 12 abstentions) on October 30. On November 6, the assembly passed (75–0, with 21 abstentions) a resolution on the urgent need for suspension of nuclear weapon tests, calling on the United States, the United Kingdom, and the USSR to achieve agreement on cessation of such tests by Jan. 1, 1963, and, if that was not possible, to reach an immediate agreement on prohibition of tests in the air, in space, and underwater, accompanied by an interim arrangement for suspension of underground tests. A second resolution urged (51–10, with 40 abstentions) the Committee on Disarmament to seek the conclusion of a treaty with effective international controls that would prohibit nuclear weapon tests. At the same time, the assembly adopted (67–16, with 23 abstentions) a resolution deploring South Africa's apartheid policies and requesting members to break off diplomatic relations with the republic, close ports to South African vessels, and boycott South African goods.

On November 20, the assembly passed (85–0, with 11 abstentions) a resolution approving the work of the UN Scientific Committee on the Effects of Atomic Radiation and calling for the establishment of a worldwide monitoring system to measure fallout. The next day, it took note of the negotiations of the Committee on Disarmament in Geneva and reaffirmed (84–0, with 1 abstention) the need for early agreement on disarmament. On November 29, it unanimously requested the secretary general to prepare plans for a 3d International Conference on the Peaceful Uses of Atomic Energy. The assembly also, on December 14, requested (33–0, with 25 abstentions) the secretary general to consult with governments on the possibility of convening a conference for signing a convention prohibiting the use of nuclear and thermonuclear weapons; and made unanimous recommendations for international cooperation in the peaceful uses of outer space.

On December 18, the assembly called (57–14, with 18 abstentions) on Portugal to desist from armed action and repressive measures against the people of Angola. The next day, it unanimously created a preparatory committee to plan a possible UN International Cooperation Year in 1965; and reaffirmed (63–11, with 26 abstentions) United Nations objectives for a unified Korea. Finally, on December 20, it expressed (100–0, with 2 abstentions) appreciation for the work of the UN Relief and Works Agency for Palestine Refugees in the Near East and extended UNRWA's mandate until June 30, 1965; and abolished (50–13, with 43 abstentions) the position of the United Nations representative on the question of Hungary, requesting the secretary general "to take any initiative that he deems helpful" on the question.

Economic and Financial Matters.—The assembly, on December 8, endorsed (91–0, with 1 abstention) ECOSOC's proposal to convene a Conference on Trade and Development in 1963 or early 1964; and, on December 14, passed (87–2, with 12 abstentions) a resolution on the question of permanent sovereignty over natural resources. On December 18, it adopted resolutions on the Cairo Declaration of Developing Countries (78–0, with 2 abstentions), the International Coffee Agreement (80–1), establishment of a UN Capital Development Fund (85–0, with 12 abstentions), a United Nations training and research institute (85–0, with 6 abstentions), measures to help offset fluctuations in commodity prices (82–0, with 10 abstentions), support of the Special Fund and the Expanded Program of Technical Assistance (81–0, with 10 abstentions), technical assistance for Rwanda and Burundi (81–0, with 11 abstentions), and population growth and economic development (69–0, with 27 abstentions).

UPI

The United States, represented by Ambassador Stevenson (r.), buys the first United Nations bond from Secretary General U Thant on November 2 to help finance UN peace operations.

At the same time, the assembly unanimously adopted resolutions on industrial development, decentralization of United Nations economic and social activities, the training of technical personnel for the acceleration of industrialization in less-developed countries, the World Food Program, land reform, inflation and economic development, economic development and conservation, African educational development, assistance to Libya, and a declaration on conversion to peaceful needs of resources released by disarmament.

Social, Humanitarian, and Cultural Matters.—On October 5, the assembly unanimously approved measures to assist the recovery of Iran from an earthquake. A draft Convention on Consent to Marriage, Minimum Age for Marriage and Registration of Marriages was adopted (92–0, with 7 abstentions) on November 7. On December 7, the assembly approved resolutions on the establishment of a Committee on Housing, Building and Planning (81–0, with 11 abstentions), international control of narcotics (92–1, with 4 abstentions), advisory services in human rights (80–0, with 21 abstentions), continuation of the Office of the UN High Commissioner for Refugees (99–0, with 1 abstention), and assistance to Chinese refugees in Hong Kong (58–22, with 26 abstentions). At the same time, it unanimously adopted resolutions on UNICEF, the fifteenth anniversary of the Universal Declaration of Human Rights, respect for human rights and fundamental freedoms, the advancement of women in developing countries, development of information media in less-developed countries, manifestations of racial prejudice and national and religious intolerance, and the preparation of draft declarations and conventions on the elimination of racial discrimination and religious intolerance. On December 19, the assembly unanimously adopted a resolution on the implementation of the Supplementary Convention of 1956 on the Abolition of Slavery, the Slave Trade and Institutions and Practices Similar to

Slavery; and three resolutions on the draft International Covenants on Human Rights.

Trusteeship and Non-Self-Governing Territories Matters.—On January 30, at its resumed 16th session, the assembly urged (99–2, with 1 abstention) Portugal to undertake reforms designed to promote the achievement of independence by Angola. On February 23, it created (88–0, with 11 abstentions) a commission to facilitate negotiations for the independence of Ruanda-Urundi. At the same time, it authorized (55–0, with 46 abstentions) the commission to engage in talks for the peaceful settlement of the future of the mwami of Rwanda. Later, on June 27, it passed (93–0, with 10 abstentions) a resolution noting that Rwanda and Burundi had decided to achieve independence separately on July 1, terminating the trusteeship agreement as of that date, and providing for assistance to the two new nations.

The assembly on February 23 voted (57–21, with 24 abstentions) to inquire into whether Southern Rhodesia had attained full self-government, and on June 28 adopted (73–1, with 27 abstentions) a resolution deploring the denial of equal political rights and liberties to all the people of Southern Rhodesia and urging the United Kingdom to take steps to correct the situation. At its 17th session the assembly, on October 12, urged (83–2, with 11 abstentions) the United Kingdom to take steps to release political prisoners in Southern Rhodesia and remove the ban on the Zimbabwe African People's Union; and, on October 31, requested (81–2, with 19 abstentions) the United Kingdom to convene a conference with full representation of all political parties in Southern Rhodesia to formulate a constitution ensuring the rights of the majority.

On December 14, the assembly adopted resolutions on the question of South West Africa (98–0, with 1 abstention), territories under Portuguese administration (82–7, with 13 abstentions), special training programs for Portuguese territories (96–2), dissolution of the Special Committee on Territories under Portuguese Administration (100–0, with 1 abstention), petitions and communications relating to South West Africa (unanimous), and the Special Committee for South West Africa (unanimous). On December 17, several resolutions were passed on the implementation of the 1960 Declaration on the Granting of Independence to Colonial Countries and Peoples. The Special Committee was continued and enlarged (101–0, with 4 abstentions), and recommendations were made on Zanzibar (84–0, with 4 abstentions) and Kenya (88–0, with 4 abstentions). On the next day, similar recommendations were made on Basutoland, Bechuanaland, and Swaziland (42–2, with 12 abstentions) and on Nyasaland (54–0, with 6 abstentions). The assembly on December 19 adopted resolutions on the report of the Committee on Information from Non-Self-Governing Territories (97–0, with 3 abstentions), continuation of the committee (96–0, with 5 abstentions), dissemination of information in these territories on the 1960 declaration (101–0, with 1 abstention), and the report of the Trusteeship Council (89–0, with 10 abstentions). At the same time, it adopted unanimous resolutions on study and training facilities for inhabitants of non-self-governing territories, racial discrimination in these territories, and dissemination of information on the United Nations and the trusteeship system in the trust territories.

Administrative and Budgetary Matters.—On December 19, the assembly accepted (76–17, with 8 abstentions) the advisory opinion of the International Court of Justice on the obligations of members to pay such budgetary expenses as those for the maintenance of UNEF and ONUC, established (78–14, with 4 abstentions) a working group of 21 nations to study criteria for the sharing of expenses of such operations, and passed (76–11, with 2 abstentions) a resolution on the geographical distribution of the staff of the Secretariat. On the next day, it authorized the secretary general to spend up to June 30, 1963, as much as $1,580,000 monthly for UNEF (76–11, with 8 abstentions), and as much as $10,000,000 monthly for ONUC (75–12, with 13 abstentions); decided (77–0, with 21 abstentions) to convene a special session before June 30, 1963, to consider the report of the working group and the financial situation of the organization (77–0, with 21 abstentions); approved unanimously a supplementary appropriation of $3,673,480, increasing the total budget for 1962 to $85,818,220; approved (88–11, with 2 abstentions) a budget of $93,911,050 for 1963; and increased (91–11, with 3 abstentions) the Working Capital Fund to $40,000,000.

Legal Matters.—The assembly on November 20 unanimously adopted resolutions on the report of the International Law Commission, and on the question of extended participation in general multilateral treaties concluded under the auspices of the League of Nations. On December 8, it approved (76–0) a revision of the agreement between the United Nations and UNESCO, abolishing the necessity for ECOSOC approval of membership applications to UNESCO by nonmembers of the United Nations. On December 18, it unanimously adopted resolutions on an international conference of plenipotentiaries on consular relations; publication of a juridical yearbook; technical assistance to promote the teaching, study, dissemination, and wider appreciation of international law; and consideration of principles of international law concerning friendly relations and cooperation among states in accordance with the charter.

International Law Commission (ILC).—The 14th session of the ILC, which met in Geneva on April 24–June 29, 1962, considered its first report on the law of treaties and adopted 29 draft articles. It also decided to limit its future program to the law of treaties, state responsibility, and the succession of states and governments.

UNITED NATIONS EDUCATIONAL, SCIENTIFIC AND CULTURAL ORGANIZATION

UNESCO is a specialized agency of the United Nations, with headquarters in Paris, France. Its policies are formulated by a biennial general conference of representatives from member nations and by an executive board of 30 members, responsible to their own governments. Activities are carried out by an international secretariat headed by an elected director-general, by experts in the field, and by national commissions which serve as a liaison between UNESCO headquarters and their own countries. The addition of Algeria, Burundi, Jamaica, Mauritania, the Mongolian People's Republic, Rwanda, Sierre Leone, Tanganyika, Trinidad and Tobago, Uganda, and Yemen in 1962 brought to 113 the number of UNESCO members.

On Nov. 14, 1962, René Maheu of France was elected director-general at the biennial UNESCO general conference. Maheu had been serving as acting director-general since November 1961 when Vittorino Veronese of Italy resigned because of ill health. A budget ceiling of $39,000,000 for ordinary UNESCO expenses for 1963 and 1964 was also set by the conference.

Education.—A UNESCO report, made public on May 24, 1962, estimated that 44% of the world's population was illiterate. The report stated that 97 of the world's 198 countries and territories had illiteracy rates of more than 50%, and 20 others of more than 95%, and that illiteracy was increasing in Asia.

In 1961–62, UNESCO concentrated on expanding educational opportunities and facilities in less-developed areas, encouraging regional cooperation. The $11.5 million crash program launched by UNESCO in 1961 to help meet African needs for trained teachers, manuals and textbooks, and inexpensive school buildings was continued during 1962. At a conference in Karachi in 1960, Asian educators called for universal primary school enrollment by 1980, despite an estimated cost of $56 billion and a total of 155 million children to be educated. With UNESCO help, three regional education offices have been established to map long-range plans and conduct research on school building.

UNESCO is acting as the executing agency for the United Nations Special Fund in setting up 42 technical and teacher-training institutes in less-developed areas.

The Convention Against Discrimination in Education, sponsored by UNESCO, came into force in May 1962. The general conference set up machinery to settle disputes arising from infringements of the declaration, which has already been signed by ten nations.

Natural Sciences.—The UNESCO scientific program, begun in 1961 and involving an expenditure of $12,801,027, was continued during 1962. In 1963–64, scientific hydrology will be stressed to tap the world's waning water resources, an activity expected to lead to an international hydrologic decade to start in 1965.

An intergovernmental survey of the Indian Ocean, begun under UNESCO sponsorship in 1961, continued during 1962. Results of this international effort are being made available to all nations through two data centers—one in Washington, D.C., and the other in Moscow. A similar study in the South Atlantic will follow.

UNESCO also established two important new science centers, an International Computation Center in Rome, and an International Institute of Seismology and Earthquake Engineering in Tokyo. In 1962, UNESCO sent experts to Iran, following the earthquake there, and established training programs for seismologists so that future damage could be minimized.

Culture.—Seven more nations, making a total of 50, ratified in 1962 the International Convention on the Protection of Cultural Property in the Event of Armed Conflict, sponsored by UNESCO.

As part of the UNESCO program to extend copyright protection, the International Convention for the Protection of Performers, Producers of Phonograph Records, and Broadcasting Organizations was deposited at United Nations Headquarters and opened for signature by member states. The convention was approved in Rome in October 1961. UNESCO also continued its work on behalf of the Universal Copyright Convention, which protects the rights of authors, artists, and publishers, and which in 1962 was ratified by seven more nations, making a total of 44.

A plan for medium-term bank loans to finance salvaging the 3,500-year-old Abu Simbel temples was rejected by the general conference. It was decided instead to encourage donations from private sources to complete the UNESCO campaign which, since its start in 1960, had already guaranteed the saving of many ancient Egyptian monuments in the Nubian Valley threatened with innundation when the Aswân High Dam is completed.

Mass Communications.—The third regional conference on mass communication, held in Paris, was concluded on Feb. 6, 1962. The principal recommendation was that the level of communications media in Africa be raised substantially.

SALLY SWING SHELLEY,
Information Officer, UNESCO, New York.

UNITED STATES

The United States of America comprises the 50 states (commonly referred to as the Union) and the District of Columbia. Puerto Rico became a self-governing commonwealth associated with the United States in 1952. The outlying possessions of the United States include Guam, the Virgin Islands of the United States, American Samoa, and various small Pacific and Caribbean islands. Among outlying areas under its jurisdiction are the Canal Zone and the Corn Islands. In addition, since World War II the United States has administered territories in the Pacific under United Nations trusteeship, as well as other former Japanese islands which, according to the Japanese Peace Treaty (1951), remain under United States control although Japan retains residual sovereignty over them.

Area.—The aggregate area of the United States and outlying areas is 3,628,150 square miles, comprising the following: the Union, 3,615,211 square miles (land, 3,548,974; inland water, 66,237), exclusive of the Great Lakes and Lake St. Clair (60,422 square miles within United States boundaries) and such major coastal waters as Long Island Sound, Delaware and Chesapeake bays, the Gulf of Mexico, Puget Sound, and the straits of Georgia and Juan de Fuca; Puerto Rico, 3,435 square miles; the possessions, 463 square miles; the Canal Zone, 553 square miles; the Corn Islands, 4 square miles; and the Trust Territory of the Pacific Islands, 8,484 square miles. (See separate articles on the states; AMERICAN SAMOA; DISTRICT OF COLUMBIA; GUAM; PACIFIC ISLANDS; PANAMA CANAL AND CANAL ZONE; PUERTO RICO; and VIRGIN ISLANDS OF THE UNITED STATES.)

Population.—According to the census of April 1, 1960, the population of the United States (50 states and the District of Columbia) was 179,323,175, exclusive of members of the armed forces and their dependents living abroad, United States citizens residing in foreign countries, and the crews of American ships at sea or in foreign ports (the 1960 census figure plus the estimate of the armed forces overseas totaled 180,004,000). This figure was 18.5% higher than the 1950 census total of 151,325,798 for the conterminous United States (48 states and the District of Columbia) and the then territories of Alaska and Hawaii. A census Bureau estimate placed the United States population (including the armed forces abroad) at 188,045,000 as of Jan. 1, 1963. Washington, D.C., the national capital, had a population of 763,956 at the 1960 census. (See also CENSUS DATA, U.S.)

Government.—Republican in form, the government of the United States is divided into executive, legislative, and judicial branches.

Executive Branch.—John F. Kennedy (q.v.), Democrat, was elected to the presidency in the national election of Nov. 8, 1960, and was sworn into office on Jan. 20, 1961. He receives a salary of $100,000, plus $50,000 for expenses; in addition, up to $40,000, nontaxable, may be expended for traveling and official entertainment.

The vice president, who serves as president of the Senate, is Lyndon B. Johnson (q.v.), also sworn in on Jan. 20, 1961. His salary is $35,000, plus $10,000 for expenses.

The executive branch also comprises 10 departments (the heads of which form the cabinet) and a number of independent establishments. The members of the cabinet receive salaries of $25,000 each. As of Jan. 1, 1963, the 10 departments and their heads were as follows:

DEPARTMENT OF STATE: Secretary, Dean Rusk; sworn in on Jan. 21, 1961.
DEPARTMENT OF THE TREASURY: Secretary, Douglas Dillon; sworn in on Jan. 21, 1961.
DEPARTMENT OF DEFENSE: Secretary, Robert S. McNamara; sworn in on Jan. 21, 1961.
DEPARTMENT OF JUSTICE: Attorney General, Robert F. Kennedy; sworn in on Jan. 21, 1961.
POST OFFICE DEPARTMENT: Postmaster General, J. Edward Day; sworn in on Jan. 21, 1961.
DEPARTMENT OF THE INTERIOR: Secretary, Stewart L. Udall; sworn in on Jan. 21, 1961.
DEPARTMENT OF AGRICULTURE: Secretary, Orville L. Freeman; sworn in on Jan. 21, 1961.
DEPARTMENT OF COMMERCE: Secretary, Luther H. Hodges; sworn in on Jan. 21, 1961.
DEPARTMENT OF LABOR: Secretary, W. Willard Wirtz; sworn in on Sept. 25, 1962.
DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE: Secretary, Anthony J. Celebrezze; sworn in on July 31, 1962.

Legislative Branch.—See the article UNITED STATES CONGRESS.

Judicial Branch.—The judiciary consists of a Supreme Court (q.v.), circuit courts of appeal, district courts, special courts, District of Columbia courts, and territorial courts. (For a discussion of the Supreme Court's principal decisions in 1961–62, see the article LAW.)

Education.—The United States Office of Education is the country's chief advisory authority on education. For particulars regarding the general trend of education in the United States, see the article EDUCATION; the section on *Education* in the articles on the states and possessions; COLLEGES AND UNIVERSITIES; LIBRARIES; and Index entries under *Education.*

Religion.—See the article RELIGION and Index entries under this heading.

Social Welfare.—See the article SOCIAL WELFARE and Index entries under this heading.

Finance.—See the article TREASURY DEPARTMENT, U.S.

Economy.—See below, the section on *The United States in 1962;* the article BUSINESS DATA, U.S.; and references under the Index entry *Financial and Economic Review.*

Agriculture.—See the article AGRICULTURE and Index entries under this heading.

Industry.—See the article INDUSTRIAL PRODUCTION.

Labor.—See the article LABOR.

Mineral Production.—See the articles MINERAL PRODUCTION and MINING and articles on specific minerals.

Foreign Trade.—According to the Department of Commerce, United States exports (including reexports) were valued at $20,874 million in 1961, and imports at $14,720 million. In the first 10 months of 1962, exports totaled $17,852.3 million, and imports $13,596.7 million. (For a discussion of United States foreign trade, see the articles INTERNATIONAL TRADE and TARIFFS and the Index entries on these subjects.)

Defense.—The organization for national security as of January 1963 included the following:

NATIONAL SECURITY COUNCIL: Membership includes the president of the United States, the vice president, the secretaries of state and defense, and the director of the Office of Emergency Planning.
SECRETARY OF DEFENSE: Robert S. McNamara (sworn in on Jan. 21, 1961); assisted by a deputy secretary of defense (Roswell L. Gilpatric; sworn in on Jan. 24, 1961), a director of defense research and engineering, 7 assistant secretaries of defense, a general counsel, a special assistant, and assistants to the secretary of defense for atomic energy and legislative affairs.
Department of the Army: Cyrus R. Vance, secretary of the army (sworn in on July 5, 1962).
Department of the Navy: Fred Korth, secretary of the navy (sworn in on Jan. 4, 1962).
Department of the Air Force: Eugene M. Zuckert, secretary of the air force (sworn in on Jan. 24, 1961).
Joint Chiefs of Staff: Chairman—Gen. Maxwell D. Taylor; Chief of Staff, U.S. Army—Gen. Earle G. Wheeler; Chief of Naval Operations—Adm. George W. Anderson, Jr.; Chief of Staff, U.S. Air Force—Gen. Curtis E. LeMay. The commandant of the Marine Corps, Gen. David M. Shoup, has a voice on the Joint Chiefs of Staff whenever it considers policy or strategy measures which "directly concern the Marine Corps."
Armed Forces Policy Council: Chairman—the secretary of defense.

(See the articles CIVIL DEFENSE and NATIONAL SECURITY and the Index entries *Military* and *National Security.*)

Communications.—See Index entries under this heading.

Transportation.—See Index entries under this heading.

THE UNITED STATES IN 1962

An international crisis over Cuba, the success of the first American astronauts to orbit the earth, and unsteadiness of the stock market overshadowed even the elections or sports in gripping American attention in 1962. Crises over Berlin, the Congo, and Southeast Asia seemed distant but nevertheless compelling in their claims on American obligation. Resumption of nuclear testing in the atmosphere, authorized by President John F. Kennedy on April 24, was generally supported for reasons of national defense and security. The Century 21 Exposition in Seattle attracted tourists westward. The death on November 7 of Mrs. Franklin D. Roosevelt turned the national mind to regret for the loss of her grace and courage.

The Cold War.—The political and economic struggle between factionally divided Soviet and Chinese communism on the one hand and the free world on the other permeated international negotiations over disarmament, commerce, and the development of new nations. The United States pressed for a coalition government of the warring rightist, neutralist, and pro-Communist factions in Laos, a position defended on January 15 by President Kennedy as well worth the risk in order to prevent a greater military threat. The coalition, supported by the United States, Great Britain, the USSR, and 11 other nations in talks with the three Laotian princes heading the factions, was finally agreed to at a conference in Khang Khay, Laos, on June 11. Meanwhile, the United States, in addition to its military complement in Laos, announced on February 8 the formation of a new military command in South Vietnam, where American military personnel became involved in guerrilla attacks by Communist forces infiltrating the country from North Vietnam. On May 15, Kennedy ordered additional ground and air forces to Thailand, at the invitation of its government, to protect that nation against the Communist guerrillas also threatening Laos (the last units of these forces were withdrawn by December). Representatives of 14 nations, meeting at Geneva, Switzerland, on July 23, signed pacts pledging the independence of Laos and arranging for withdrawal of all foreign forces from the country. (See also FAR EAST; LAOS; VIETNAM.)

Francis Gary Powers and Col. Rudolf I. Abel were released from prison terms for espionage by the Soviet Union and the United States, respectively, and exchanged at the East Germany–West Berlin border on February 10. On March 6, Powers testified before the Senate Armed Services Committee concerning his capture after his U-2 reconnaissance plane had been shot down in the USSR in 1960. The committee released a statement by John A. McCone, director of the Central Intelligence Agency, exonerating Powers for his part in the incident.

The United States, Britain, and France on February 7 and repeatedly thereafter rejected demands by the USSR that part of the air space in

MEMBERS OF PRESIDENT KENNEDY'S CABINET

(As of January 1, 1963)

Biographies of the four top-ranking cabinet officers—Dean Rusk, C. Douglas Dillon, Robert S. McNamara, and Robert F. Kennedy—appear under their own names. Sketches of the others (listed in order of succession to the presidency) follow.

J(ames) Edward Day (b. Jacksonville, Ill., Oct. 11, 1914) was sworn in as postmaster general on Jan. 21, 1961. After graduation from the University of Chicago (B.A., 1935) and Harvard Law School (LL.B. *cum laude*, 1938), he was associated with a Chicago law firm until 1949, except for Navy service during World War II. In 1949, Illinois Gov. Adlai Stevenson chose him as his legal and legislative aide, and in 1950–53 he was state insurance commissioner. In 1953 he joined the legal staff of the Prudential Insurance Company, and after 1957 headed the Western division office as a vice president.

Stewart Lee Udall (b. St. Johns, Ariz., Jan. 31, 1920), reelected in 1960 for his fourth term as Democratic congressman from Arizona, was sworn in as secretary of the interior on Jan. 21, 1961 (becoming the first cabinet officer from his state). In World War II he served with the Fifteenth Air Force in Italy. Later he completed his education at the University of Arizona (LL.B., 1948), and practiced law in Tucson until his election to Congress in 1954.

During 1962, Secretary Udall engaged in a number of conferences and tours designed to keep problems of the conservation and development of natural resources active in the minds of Americans. At a White House Conference on Conservation on May 24, he told the 500 attending conservationists that some short-term profits must be sacrificed to satisfy "the overriding need of men for an environment that will renew the human spirit."

On August 17 and 18, the secretary accompanied President Kennedy on his tour of new dams and damsites in the West. From August 29 to September 9, Udall visited a number of Soviet hydroelectric stations as head of a United States delegation of federal power officials under the United States–USSR exchange program, and on September 6 he conferred with Soviet Premier Khrushchev.

Orville Lothrop Freeman (b. Minneapolis, Minn., May 9, 1918), sworn in as secretary of agriculture on Jan. 21, 1961, was graduated *magna cum laude* from the University of Minnesota in 1940 (LL.B., 1946). While engaged with a Minneapolis law firm, he was elected governor in 1954 as candidate of the Democrat-Farmer-Labor Party. As leader of this group, he was a severe critic of Secretary of Agriculture Ezra T. Benson's policies. He was named to the Kennedy cabinet after his unsuccessful bid for a fourth term as governor.

Strenuous efforts by Secretary Freeman, including visits to some 50 congressmen, were unable to prevent the defeat of the Kennedy administration's farm bill by the House of Representatives on June 21, 1962.

As details of the controversial activities of Billy Sol Estes became public (see TEXAS), accusations of complicity in his dealings were leveled at leading officials of the Department of Agriculture. On May 11, President Kennedy issued a statement expressing confidence in Freeman, but two Republican senators demanded his resignation. When the Senate's permanent investigating subcommittee opened hearings into the case, Secretary Freeman strongly defended his department in testimony on June 28–29 and again on July 5.

Luther Hartwell Hodges (b. Pittsylvania County, Virginia, March 9, 1898), sworn in as secretary of commerce on Jan. 21, 1961, has had two separate careers. A graduate of the University of North Carolina (B.A., 1919), he worked for the Marshall Field & Company textile empire, rising to a vice presidency before his retirement in 1950. In his first political endeavor he was elected lieutenant governor of North Carolina in 1952, and succeeded to the governorship on the incumbent's death in 1954. He won the gubernatorial election in 1956.

When the stock market slumped sharply in late May 1962, Secretary Hodges declared that he favored immediate action to stimulate the economy. He called for an early announcement of administration proposals to revise the tax laws and for cuts in both individual and corporate income tax rates.

W(illiam) Willard Wirtz (b. De Kalb, Ill., March 14, 1912) was sworn in as secretary of labor on Sept. 25, 1962, with the confirmation of the prior secretary, Arthur J. Goldberg, as justice of the U.S. Supreme Court. A graduate of Beloit College (A.B., 1933) and Harvard Law School (LL.B., 1937), Wirtz taught law at the State University of Iowa for two years and labor law at Northwestern University (1939–1942 and 1946–1954). From 1942 to 1946 he served in Washington successively as assistant general counsel of the Board of Economic Warfare, general counsel and public member of the War Labor Board, and chairman of the National Wage Stabilization Board. A law partner of Adlai E. Stevenson for some years, Wirtz was also an arbitrator in private practice. He became under secretary of labor on Jan. 30, 1961, and was executive director of President Kennedy's Advisory Committee on Labor-Management Policy.

In 1962, Wirtz assisted in the mediation of the west coast maritime strike and the Chicago railway telegraphers strike. After becoming secretary of labor in September, he helped settle the New York Newspaper Guild—*Daily News* strike of November 1–8.

Anthony Joseph Celebrezze (b. Anzi, Italy, Sept. 4, 1910) was sworn in as secretary of health, education, and welfare on July 31, 1962, succeeding Abraham A. Ribicoff, who had resigned on July 12 to seek election to the U.S. Senate from Connecticut. When he was two years old, Celebrezze's parents, who were naturalized United States citizens visiting their native Italy, brought him to their home in Cleveland, Ohio. Growing up in a slum area, the ninth of a family of 13 children, he was graduated from Cleveland's Central High School, attended John Carroll University for a year, and transferred to Ohio Northern University at Ada (LL.B., 1936). He practiced law in Cleveland, except for naval service in World War II, until his election to the state Senate in 1950. While serving his second term in the Senate, he was elected mayor of Cleveland. Winning a fifth consecutive term in 1961, he received 73.8 percent of the total vote and carried every ward in the city. His administration was highlighted by slum clearance and urban renewal programs.

the corridors leading to West Berlin be reserved for its military aircraft. Beginning on February 14, Soviet jet fighters from time to time harassed planes in the corridors. Although the Soviet government abolished the post of Soviet commandant in Berlin on August 22, the three Western powers refused to recognize this unilateral abdication of responsibility. (See also GERMANY.)

President Kennedy announced on March 2 that the United States would begin nuclear tests in the atmosphere over the Pacific Ocean by the end of April in order to keep American progress in nuclear defense abreast of developments resulting from the resumption of Soviet atmospheric testing in September 1961. He offered, however, to abandon test plans if the USSR would sign a treaty providing for the discontinuance of all nuclear weapons tests with provision for international inspection and supervision. The American tests began on April 25 near Christmas Island and ended there with the detonation on July 11 of a 26th device. High-altitude tests were conducted near Johnston Island. On July 9, an explosion aboard a Thor missile at an altitude of about 200 miles lit the Pacific night from Hawaii to Samoa. Atmospheric tests were resumed on October 2 and completed on November 4. (See also ATOMIC ENERGY.)

Disarmament talks dragged on at a 17-nation conference held at Geneva from March 14 to September 7 and again after November 26. The United States and Britain were prepared to accept a treaty, without international inspection, outlawing all nuclear tests except underground ones, or alternatively a treaty including all tests with adequate inspection. The Soviet Union insistently declined to open its territory to general international inspection. (See also DISARMAMENT.)

Cuban Crisis.—On September 26, in response to Soviet-supported arms development in Cuba, Congress passed a joint resolution declaring that the United States would "prevent by whatever means may be necessary, including the use of arms," the extension by force or threat of Cuba's "aggressive or subversive activities to any part of this hemisphere." Passage by the House of Representatives that day was by a vote of 384 to 7, following Senate approval on September 20 by 86 to 1, the opposition contending only that the resolution was too weak.

In a radio and television address on October 22, President Kennedy revealed that "within the past week unmistakable evidence has established the fact that a series of offensive missile sites is now in preparation" in Cuba. One type of installation included missiles capable of carrying nuclear warheads for 1,000 miles, while other uncompleted sites appeared to be designed for "missiles capable of traveling twice as far." Moreover, Soviet jet bombers were being uncrated and assembled on the island. The president branded as false Soviet statements of October 11 and 18 that arms deliveries to Cuba had been made solely for defensive purposes. He announced a naval quarantine of foreign military equipment under shipment to Cuba and declared that the United States would "regard any nuclear missile launched from Cuba against any nation in the Western Hemisphere as an attack by the Soviet Union on the United States, requiring a full retaliatory response upon the Soviet Union." The Council of the Organization of American States (19–0, with 1 abstention) approved the quarantine the next day.

The quarantine, effective on October 24, resulted in no direct challenge from Cuba-bound Soviet ships, most of which changed course. On October 26, Soviet Premier Nikita S. Khrushchev offered to remove missiles from Cuba under United Nations supervision if the United States would end the quarantine and give assurances that it would not invade Cuba. President Kennedy generally accepted these proposals, but Cuban Premier Fidel Castro refused inspections and demanded that the United States withdraw from its naval base at Guantánamo. The United States suspended its quarantine and also aerial photographic flights for 48 hours from October 30, during a visit to Cuba by Acting Secretary General U Thant, who was unable to obtain Cuban agreement to inspected removal of the missiles. Soviet First Deputy Premier Anastas I. Mikoyan, in Cuba on November 2–26, presumably met with a similar refusal.

Department of Defense officials announced on November 8 that aerial photography revealed that "all known" missile bases in Cuba had been dismantled, and that missiles were being withdrawn. On November 20, President Kennedy announced the end of the naval quarantine that day, after agreement by the Soviet Union to withdraw jet bombers from Cuba (the bombers were duly withdrawn, as announced by the Department of Defense on December 6). (See also CUBA; INTER-AMERICAN AFFAIRS.)

Global Responsibilities.—The United States government vigorously supported United Nations efforts to reunite secessionist Katanga Province with the central government of the Republic of the Congo. In particular, it backed a plan, proposed on August 20 by U Thant, whereby Katanga would be given some financial and political concessions. The secretary general suggested that United Nations members apply an embargo against the province if it did not agree to reunification. The plan was reluctantly supported by Britain and Belgium, but opposed by France and the Soviet Union. No progress was made toward a peaceful settlement, and in December fighting was renewed between United Nations and Katangan forces. (See also CONGO, REPUBLIC OF THE.)

On October 29, the United States agreed to furnish emergency arms aid requested by India because of attacks by Communist China. This aid policy resulted in strained relations with Pakistan, but these were eased when United States Assistant Secretary of State W. Averell Harriman helped to arrange an agreement, announced on November 29, for Indo-Pakistani talks on Kashmir. (See also FAR EAST; INDIA.)

Relations between the United States and its allies in the North Atlantic Treaty Organization were strained at times because of American official views that the United States should assume the burden of nuclear weapons development for reasons of cost and centralized command, and that other NATO powers should increase their ground forces. The desire of the United States to abandon the Skybolt missile, on which Britain was depending for its own nuclear deterrent, was the chief topic of the conference of President Kennedy and Prime Minister Harold Macmillan, held in the Bahamas on December 18–21. It was then decided to provide Britain with Polaris missiles instead of the Skybolt. (See also GREAT BRITAIN; MISSILES; NORTH ATLANTIC TREATY ORGANIZATION.)

National Defense and Space Flights.—Secretary of Defense Robert S. McNamara declared on February 17 that administration planning included defense against all types of warfare, whether small-scale guerrilla actions or nuclear conflict. On February 5, he had stated that the United States had "nuclear capability to absorb a first strike" and "retain sufficient weapons" to destroy an opponent. During the year the administration be-

came involved in controversy with members of Congress over the desirability of RS-70 bombers, which McNamara regarded as less suitable and more vulnerable than B-52 bombers. Chairman Carl Vinson of the House Armed Services Committee agreed on March 20 to accept assurances from the president and secretary that the RS-70 program would be restudied. On August 1, Congress appropriated $48.1 billion for defense. (See also NATIONAL SECURITY.)

On February 20, Lt. Col. John H. Glenn, Jr., became the first American to go into orbit, circling the earth three times in a space capsule. Lt. Comdr. Malcolm S. Carpenter repeated the feat on May 24, and Comdr. Walter M. Schirra, Jr., circled the earth almost six times on October 3. Meanwhile, on April 26, a United States lunar probe, Ranger IV, reached the hidden side of the moon. On July 22, a Venus probe, Mariner I, was destroyed in flight by signal because it had veered from course; but on December 14, Mariner II passed Venus and recorded scientific data. Television pictures were transmitted for the first time by satellite relay on April 24. The American Telephone and Telegraph Company, in cooperation with the United States government, placed a Telstar communications satellite in orbit on July 10; and on December 13 a Relay satellite was placed in orbit. (See also SPACE FLIGHT.)

Secretary of State Dean Rusk said in Seattle on May 25 that space activities should be placed under "international law and supervision." President Kennedy declared in Houston on September 12 that space should not be governed by "a hostile flag of conquest" but by "a banner of freedom and peace." On September 25, Congress appropriated $3.7 billion for the National Aeronautics and Space Administration for the fiscal year 1963.

Legislative Record.—The 2d session of the 87th Congress convened on January 10 and adjourned on October 13. At the beginning of the session the Senate had 64 Democrats and 36 Republicans, and the House of Representatives 258 Democrats and 174 Republicans (plus 5 vacancies). John W. McCormack, Democrat, was elected speaker of the House by a straight party vote on January 10 to succeed the late Sam Rayburn. The Democratic caucus on January 9 had unanimously elected Carl Albert majority leader to succeed McCormack. Hale Boggs was designated majority whip. Charles A. Halleck continued as minority leader. In the Senate, Mike Mansfield continued as majority leader, and Everett McKinley Dirksen as minority leader. Senate Republicans, by a vote of 21 to 14 on January 10, chose Bourke B. Hickenlooper over Leverett Saltonstall as chairman of their Policy Committee to succeed the late Styles Bridges.

In his State of the Union message on January 11, President Kennedy emphasized the need for freer trade with the European Economic Community (Common Market), for a $200 million purchase by the United States of United Nations bonds, and for a $3 billion program for the Alliance for Progress. He also advocated tax revision, including presidential authority to reduce personal income taxes; manpower training and youth employment programs; higher salaries for federal employees; federal aid for public school construction and for teachers' salaries; health insurance for the aged through social security; a public health and welfare program; increased postal rates; incentives

to build fallout shelters; a cabinet Department of Urban Affairs and Housing; and mass transportation, air pollution control, conservation, and recreation programs. On January 18, he submitted to Congress a balanced budget for the fiscal year 1963, proposing expenditures of $92.5 billion.

The proposal for a Department of Urban Affairs and Housing was defeated after a series of events widely interpreted as strengthening the coalition of Southern Democrats and Republicans in Congress. Kennedy submitted a reorganization plan to effect the change and announced his intention of appointing Robert C. Weaver, administrator of the Housing and Home Finance Agency, to the proposed cabinet position. Weaver, in a speech in New York on February 13, called it "unfortunate" that many persons would consider a negative vote "as a vote against the concept of having a Negro in the cabinet." Senator Mansfield attempted to obtain a Senate vote on the plan before a House vote by moving to take the proposal out of committee, but his motion was criticized by some senators as political interference with procedures, and it was defeated by a vote of 58 to 42 on February 20. The next day, the House defeated the proposal by a vote of 264 to 150.

A three-year, $435 million Manpower Development and Training Act was adopted by voice votes in the Senate on March 8 and in the House on March 13. President Kennedy called it "perhaps the most significant" employment measure "since the historic Employment Act of 1946," and signed it on March 15. (See also LABOR.) Both houses, by voice votes on June 27, passed the administration-supported Migration and Refugee Assistance Act, which was signed by the president on June 28. (See also REFUGEES AND DISPLACED PERSONS.) An administration bill for welfare liberalization, passed on July 19 by the House by a vote of 357 to 34 and by the Senate by voice vote, was signed on July 25. (See also SOCIAL WELFARE.) A constitutional amendment prohibiting a poll tax as a requirement for voting in federal elections received congressional approval on August 27, when the House passed it by a vote of 295 to 86. It had been adopted (77–16) by the Senate on March 27. The proposed amendment is subject to ratification within seven years by the legislatures of three fourths of the states.

Poet Robert Frost (right) is awarded Congressional Medal by President Kennedy on March 26 for his contributions to American letters. (Frost, age 88, died on Jan. 29, 1963.)

WIDE WORLD

An administration-supported measure authorizing the creation of a private corporation to own and operate communications by satellite was approved (373–10) by the House on August 27 and signed by the president on August 31. The bill had passed the Senate (66–11) on August 17 after debate had been ended by the imposition of cloture (by a vote of 63 to 27) on August 14. The cloture procedure, requiring a two-thirds majority, was voted by the Senate for the first time since 1927. Several liberal Democratic senators had talked at length in favor of a government-owned satellite communications system. In signing the bill, the president declared that it had "many safeguards to protect the public interest."

Authorization of a loan of $100 million to the United Nations, on the basis of equal fund matching by other countries, was approved by the House (257–134) on September 14 and by the Senate by voice vote on September 19, and was signed by the president on October 2. The House voted (177–102) to express the judgment that the United Nations should implement an advisory opinion of the International Court of Justice to the effect that expenditures authorized for United Nations forces in the Congo and the Middle East were legal obligations of the members, to be included in calculating the delinquency of more than two years in paying assessments that would result in the loss of voting rights in the General Assembly. (See also INTERNATIONAL LAW.)

The House agreed (342–13) on September 24 to a joint resolution approving a presidential request for authority to call up 150,000 reservists and to extend periods of active duty. The Senate had voted its approval (76–0) on September 13. A compromise farm bill was passed by the House (202–197) on September 20 and by the Senate (52–41) on September 25; it was signed by the president two days later. The administration had wanted a bill to reduce the cost of helping farmers by means of tightening controls on wheat and feed grains, with quotas based on total production instead of acreage. The compromise provided for wheat controls effective in 1964 after approval by two thirds of the wheat farmers in a national referendum, with acreage to be set by the secretary of agriculture at a level sufficient to produce total wheat requirements; for the reduction of supports for corn and feed-grain prices to a range of 50 to 90% of parity; and for a 10-year pilot program designed to convert surplus cropland to recreation and conservation uses. (See also AGRICULTURE.)

Provision for tax-deductible pension funds established by self-employed persons was made in legislation passed by the Senate (70–8) on September 23 and by the House (361–0) on September 25. The bill was signed on October 10 by the president, who said that it was "more suited" to a general tax reform which he intended to propose in 1963. Tax revision legislation, less extensive than

the administration preferred, was passed on October 2 by voice vote in the House and by 56 to 22 in the Senate, and was signed by the president on October 16. It allowed a tax credit of 7% for business modernization and restricted tax deductions for business entertainment. It did not include the president's recommendation for withholding taxes on dividends and interest. (See also TAXATION.)

A major administration goal was achieved by the passage of the Trade Expansion Act on October 4, by voice vote in the Senate and by 225 to 91 in the House. The act authorized the president to reduce tariffs by as much as 50% and to eliminate them entirely on many goods exported primarily by the United States and Common Market countries. Foreign aid appropriations of $3,928.9 million, $1,032.4 million less than the administration had requested, were passed in the House (171–108) on October 6 and in the Senate by voice vote on October 8. (See also FOREIGN AID PROGRAMS, U.S.; INTERNATIONAL TRADE.)

Alarmed by harmful effects reported from the use of the drug thalidomide, Congress enacted (by voice vote in the Senate on October 3 and by 347 to 0 in the House the next day) new drug control legislation. Signed by the president on October 10, the act required proof of the effectiveness of drugs before marketing, imposed new testing and labeling standards, and permitted the government to withdraw hazardous drugs from the market. Postal rate increases and federal employee pay raises were adopted by the Senate by voice vote on October 3 and by the House by 312 to 20 on October 5, and were approved by the president on October 11. Rates for first-class mail were raised by 1 cent per ounce, and rates for publications were increased by stages over a three-year period. Salary increases averaged 11% for 590,000 postal workers and 10% for about 1,000,000 other federal employees.

Legislation for medical care for the aged through the Social Security system had been defeated (52–48) by the Senate on July 17. Other legislation shelved during the session included aid to higher education, restrictions on literacy tests for voting, proposals for youth employment and training, and a fallout shelter incentive program. Appropriations were delayed by disputes between the House and the Senate over procedures. Major legislative investigations dealt with government stockpiling programs, regulation of the speeches of military officers, missile industry profits, highway land acquisition policies, and practices of the Department of Agriculture in grain storage and cotton allotments, highlighted by the indictment for fraud of financier Billie Sol Estes of Texas.

Political Developments.—President Kennedy participated in the fall political campaign with a vigor unprecedented for an American president by speaking in the East, Midwest, and West for Democratic candidates for Congress, while former President Dwight D. Eisenhower campaigned extensively for Republican candidates. As a result of the elections of November 6, the Democrats retained control of both houses of Congress—the Senate with an increase of 4 seats and the House with a loss of 4. The new 88th Congress was to have 68 Democratic to 32 Republican seats in the Senate, and 258 to 176 (plus 1 vacancy) in the House. Subsequently, the Republicans gained a 33d Senate seat by the appointment of Gov. Edwin L. Mechem of New Mexico, following the death on November 18 of Democratic Sen. Dennis Chavez.

In 35 races for governorships, Democrats won 20, and Republicans 15. In consequence, 33 of the 50 governorships became Democratic, and 17 Republican, producing a net gain of 1 for the Republicans. Republicans overturned 7 Democratic administrations, including those of the large industrial states of Pennsylvania, Ohio, and Michigan, and that of Oklahoma for the first time in history; but Democrats replaced Republicans in 6 states, including Massachusetts, New Hampshire, and Vermont. Voter dissatisfaction with incumbent governors, not generally matched in the case of incumbents in Congress, was attributed to higher taxes and to problems involved in providing expanded public services.

President Kennedy, clearly the national leader of the Democratic Party, was everywhere regarded as the prospective party nominee for reelection in 1964. The reelection of Nelson A. Rockefeller as governor of New York made him a front runner for the Republican presidential nomination, and the election of William W. Scranton and George W. Romney as governors, respectively, of Pennsylvania and Michigan, brought them into prominent consideration. Sen. Barry M. Goldwater of Arizona continued to receive support from conservatives in the Republican Party. (See also DEMOCRATIC PARTY; ELECTIONS, U.S.; REPUBLICAN PARTY.)

The restoration of the White House, under Mrs. John F. Kennedy's direction, continued in 1962. This photo is of the Red Room.

UPI

A decision of the Supreme Court on March 26 that federal courts had jurisdiction over state legislative apportionment issues, arising under the 14th Amendment to the federal Constitution, brought action or litigation on reapportionment in many states. (See also REAPPORTIONMENT AND REDISTRICTING.)

National Economy.—In 1962, Congress appropriated a peacetime record of $92,266,154,659 (the president had requested $96,928,562,615), and approved $9,996 million in permanently recurring appropriations, chiefly for interest on the national debt. Expenditures of the federal government for the fiscal year 1962 totaled $87.7 billion, and receipts a record $81.4 billion. The resulting deficit of $6.3 billion had been exceeded in peacetime only in the fiscal year 1959. The gross direct debt of the federal government on Nov. 30, 1962, was $305.4 billion, as compared with $296.2 billion at the end of 1961.

On April 10–11, 1962, several steel companies announced price increases averaging $6 per ton. Regarding this action as a threat to his policy of promoting economic growth without inflation, President Kennedy denounced it on April 11 as "a wholly unjustifiable and irresponsible defiance of the public interest." The administration brought pressure to bear on the industry by threatening the loss of government contracts, by taking steps toward prosecution under the antitrust laws, and by

persuading some industry leaders to forgo the price rise. On April 13–14, the industry rescinded the increase. The president's victory was generally popular, but many businessmen resented administration pressures and what they construed as antibusiness attitudes. In a number of public statements, the president therefore undertook to reassure business.

The stock market suffered a sharp decline on May 28, with losses in value aggregating $20.8 billion, but prices rallied the next day, and 60% of the losses were recovered. The New York Stock Exchange reported that the sale of securities by individual investors had caused the decline, and that purchases by banks and mutual funds had aided the recovery. Prices again declined sharply on June 13–14, with the Dow-Jones industrial average dropping to 563, the lowest point of the year. Administration officials viewed the market fluctuations as the adjustment of prices to real values and expressed their confidence in the soundness of the economy. By mid-November, average stock prices were 15% above the June low, but 17% below the peak of December 1961. (See also Stocks and Bonds.)

The gross national product, which was $518.7 billion in 1961, rose to a seasonally adjusted annual rate of $555.3 billion in the third quarter of 1962. Total personal income, which had been $416.4 billion in 1961, increased steadily from a seasonally adjusted annual rate of $428.8 billion in January to $447.4 billion (preliminary figure) in November. (See also Income.) Civilian employment, which was 67,824,000 in October 1961, was 65,058,000 in January 1962. It rose steadily to 69,762,000 in August and then declined irregularly to 67,981,000 in November. Unemployment, which was 4,091,000 in December 1961 and 4,663,000 in January 1962, generally declined, with upward fluctuations in June and July, to 3,294,000 in October, but rose again to 3,801,000 in November, when the seasonally adjusted rate of unemployment was 5.8% of the civilian labor force. Average weekly hours of production workers in manufacturing establishments (seasonally adjusted) rose only slightly, from 40.2 in October 1961 to 40.5 in September 1962, and stood at 40.4 (preliminary figure) in November. Average weekly earnings in the same establishments were $94.54 in October 1961 and $97.36 (preliminary figure) in November 1962. (See also Labor; Wages and Hours.)

"I'm Making a Few Alterations."

The value of new construction, at seasonally adjusted annual rates, was $59,019 million in January 1962. After a decline to $56,811 million in February, it rose irregularly to a high of $62,829 million in August and stood at $62,646 million in October. (See also Housing.)

The consumer price index (1957–59 = 100) was 104.5 in January 1962, rose steadily to 106.1 in September, and declined slightly to 106.0 in October. The index of food prices, which was 102.5 in January, rose to 104.8 in September and decreased to 104.3 in October. The index of prices received by farmers for all products (1910–14 = 100), which was 242 in January, fluctuated to a high of 250 in September and stood at 245 in November. The parity ratio was 80 in January and, after modest fluctuations, was again 80 in November. (See also Cost of Living.)

Exports of United States merchandise totaled $1,617.2 million in January 1962, rose steadily to a high of $1,948.5 million in June, and declined irregularly to $1,593.1 million in October. General imports, which were $1,372.6 million in January, fluctuated to a high of $1,453.5 million in May and were $1,438.9 million in October. (See also International Trade.) Seasonally adjusted manufacturers' sales were $32.04 billion in January, rose to $33.5 billion in May, and after modest fluctuations reached a high of $33.68 billion in September before declining to $33.33 billion in October. Personal consumption expenditures, which totaled $338.1 billion in 1961, were at a seasonally adjusted annual rate of $350.2 billion in the first quarter of 1962 and of $358.2 billion in the third. Corporate profits after taxes were at a seasonally adjusted annual rate of $25.6 billion in the first quarter and $26.1 billion in the second. (See also Business Data, U.S.) The seasonally adjusted index of industrial production (1957–59 = 100) rose from 114.3 in January to 119.9 in September and stood at 119.5 (preliminary figure) in November. (See also Industrial Production.)

Consumer credit was $56,278 million in January and rose irregularly to $59,744 million in October. Mortgage debt increased (preliminary figures) from $229.8 billion at the end of the first quarter of 1962 to an all-time high of $236.5 billion at the end of the second. Discount rates at all Federal Reserve banks remained at 3%, a rate which had prevailed since August–September 1960. United States gold reserves, which had declined from $22,857 million at the end of 1957, totaled $16,847 million in January 1962 and $16,081 million in September. (See also Banking; Consumer Credit.)

Organized Labor.—On February 24, the AFL-CIO Executive Council suggested a "more adequate and aggressive program" to combat unemployment. Contending that unemployment rather than inflation presented the greater threat to the economy, it proposed vigorous collective bargaining policies, an extensive public works program, and, in times of unemployment, a shorter workweek without a reduction in pay. At its meeting in Bal Harbour, Fla., on February 19–26, the council also advocated reduced taxes for low-income groups, greater benefits and flexibility in unemployment compensation systems, the increase of the minimum wage to $1.50 per hour and the extension of coverage of the law, and the enactment of legislation to provide medical care for the aged under Social Security.

In a statement of administration labor-management policy, Secretary of Labor Arthur J. Goldberg said on February 23 that government must

"give more help to the collective bargaining process" and "increasingly provide guidelines" for settlements in the public interest. George Meany, president of the AFL-CIO, replied on February 26 that the role of government was one of "mediation, conciliation," or other aid to "industrial peace," but not assertion of "the national interest," which he regarded as "infringing on the right of free people and free society." The AFL-CIO Executive Council, in Chicago on August 13, approved plans to achieve through collective bargaining and legislation a national 35-hour workweek without pay reductions. The opposition of the administration to this proposal was expressed by Goldberg, who met with the council on August 25.

The Supreme Court held (5–3) on June 18 that federal courts were not authorized by law to halt strikes called in violation of a labor contract pledge against them. (See also LABOR.)

Civil Liberties.—The most controversial ruling of the Supreme Court in 1962 held, in a 6–1 vote announced on June 25, that a state-recommended nondenominational prayer could not be used to open school sessions in New York. Justice Hugo L. Black in the opinion of the court said that the prayer, from which pupils could be excused on request, was a governmental religious activity violating the "establishment of religion" prohibition in the 1st Amendment to the Constitution.

During the year the Department of Justice brought additional suits in Alabama, Georgia, and Mississippi to end racial discrimination in voting rights. (See also CIVIL LIBERTIES; LAW.)

Desegregation.—Rioting by students and outsiders at the University of Mississippi at Oxford, Miss., on September 30–October 1 accompanied the court-ordered registration of James H. Meredith, a Negro, as a student. Two persons were killed. For a time resistance by Gov. Ross R. Barnett complicated the registration. United States marshals were reinforced by national guardsmen and by federal troops, and by October 2 troops stationed in and near Oxford numbered 13,500. Former Maj. Gen. Edwin A. Walker and others were arrested on charges of inciting part of the disturbances. Meredith attended classes beginning on October 1 under the gradually relaxed escort of United States marshals. (See also EDUCATION; MISSISSIPPI.)

The President's Committee on Equal Employment Opportunity, headed by Vice President Lyndon B. Johnson, announced the agreement of 31 leading defense contractors on February 7 to the elimination of employment discrimination against minorities. Herbert Hill of the National Association for the Advancement of Colored People said on April 5 that the pledges, to which others had been added, "resulted in more publicity than progress." On November 15, 119 of 131 national unions of the AFL-CIO signed antidiscrimination pledges with the committee.

Racial integration in all military Reserve units was ordered by the Department of Defense on April 3. The order did not, however, apply to the National Guard units under the command of state governors (in 10 states these were reported to be segregated). President Kennedy, on November 20, issued an executive order prohibiting racial or religious discrimination in housing built or purchased with federal assistance or financed by federally insured mortgages.

The Department of Justice brought suit in a federal court at Richmond, Va., on September 17 to prohibit segregation in Prince George County public schools, which receive federal aid because of their location in an impacted area where federal military and civilian personnel live. In many communities school and other desegregation proceeded without incident during the year, although frequently only on a token basis.

UNITED STATES CONGRESS

The Congress of the United States, legislative branch of the federal government, consists of the Senate, the 100 members of which are elected for six-year terms; and the House of Representatives, the 435 members of which are elected for two-year terms. The members of Congress receive salaries of $22,500; the salary of the speaker of the House of Representatives is $35,000, plus $10,000 for expenses.

The 2d session of the 87th Congress was held from Jan. 10 to Oct. 13, 1962. The 1st session of the 88th Congress convened on Jan. 9, 1963; its composition was as follows: Senate—67 Democrats and 33 Republicans; House of Representatives—258 Democrats, 176 Republicans, 1 vacancy, and 1 resident commissioner. The vacancy was filled by the election of Don H. Clausen, Republican, from California's 1st District on Jan. 22, 1963. A list of the members of Congress as of Jan. 9, 1963, appears on pages 714–715.

(For information on major congressional activities in 1962, see UNITED STATES—*The United States in 1962;* also Index entries on special subjects, such as *Foreign Aid Programs, U.S.; Housing; Labor;* and *Taxation.*)

UNITED STATES INFORMATION AGENCY

As a separate federal agency, USIA tells the United States story abroad. It seeks to make national policies, according to Edward R. Murrow, director, "everywhere intelligible and, wherever possible, palatable." In 1962 it operated through 219 field posts associated with American diplomatic missions in 99 countries.

In 1962 the Voice of America, the radio service of the agency, regularly broadcast by short wave in 38 languages for a total of over 740 hours

per week. These programs were carried from 87 transmitters, 32 of them in the United States; other programs were taped in as many as 62 languages for some 2,500 medium-wave local stations abroad. Communist countries employed over 2,000 jamming transmitters to prevent reception, at a cost several times that of American broadcasts.

Television films were provided by the agency to stations in 57 countries to serve an estimated 55 million sets and 176 million viewers. Motion pictures were distributed in 52 languages through 210 film libraries maintained in 98 countries. A wireless file of news, some 10,000 words daily, was sent abroad for translation, supplemented by picture prints and negatives. Four magazines were published in Washington for use abroad; posts overseas produced 68 other magazines in 25 languages, issued 20 newspapers, and distributed 12.5 million pamphlets.

The agency maintained 181 libraries in 83 countries and, in addition, 84 reading rooms in 37 countries. They were stocked with 2.5 million books, a third of them in local languages. Binational cultural centers, providing study programs in English and other subjects in cooperation with leading local citizens, increased to 145 in 35 countries, 14 new ones being established in 1962 in Latin America. About 220,000 students were enrolled in English courses under agency auspices. Publication of 7.1 million copies of books was supported abroad, almost 5 million of them in translation. The Informational Media Guaranty Program provided for conversion to United States funds of $5.3 million of foreign currencies received by Americans from sale of publications in countries where currency could not readily be converted.

Congress appropriated for the fiscal year ending June 30, 1963, $129 million in operating funds (of $136.3 million requested), $10.3 million for construction of radio facilities, $8 million for special international exhibits, and $1 million for the Informational Media Guaranty Program—a total of $148.3 million. On Aug. 31, 1962, agency personnel totaled 11,028 (2,620 domestic employees, 1,645 Americans abroad, and 6,763 citizens of the host countries).

UPPER VOLTA

The Republic of Upper Volta is a landlocked country in West Africa. It has an estimated area of 105,839 square miles, and a population (1961 est.) of 4,400,000, consisting largely of Voltaic and Mandé ethnic groups and a European minority of 3,000, mainly French. Ouagadougou (pop. est., 63,000) is the capital; Bobo-Dioulasso (pop., 51,000) is a principal economic center. French is the official language.

Government.—This former French overseas territory within French West Africa became independent on Aug. 5, 1960. The republic has a presidential system of government. Legislative power is vested in an unicameral Legislative Assembly of 75 members, elected for five-year terms by universal suffrage. In the elections of April 19, 1959, the Voltaic Democratic Union (UDV) won 64 seats. Maurice Yaméogo, leader of the UDV, was elected president of the republic by the National Assembly on Dec. 8, 1960. The republic is a member of the Council of the Entente.

Education and Religion.—School enrollment, 1960: 59,553 (5% of the school-age population), including primary, 56,598; secondary, 1,480; technical, 625; teacher-training, 850. The majority of the population holds animistic beliefs; the peoples in the northeast are mainly Muslims, and there is a small minority of Christians.

Finance.—Government revenue, 1961: 5,654 million francs CFA; expenditure, 7,771 million (246.85 francs CFA equal U.S.$1). The budget deficit was made up by contributions from France and the Council of the Entente Solidarity Fund. In 1962, West Germany granted Upper Volta 700 million francs CFA, and the European Development Fund contributed $8.4 million for various development projects.

Transportation.—Upper Volta's chief link to the sea is the Abidjan-Niger railroad, which runs southwestward from Ouagadougou, via Bobo-Dioulasso, to the port of Abidjan, Ivory Coast. All-weather roads connect the main towns and aggregate some 3,700 miles. There are international airports at Ouagadougou and Bargo, 11 miles from Bobo-Dioulasso.

Production.—About 90% of the population is engaged in agriculture or animal husbandry. Cattle, sheep, and goats are raised in the northern areas free from the tsetse fly; about 70,000 cattle and 170,000 sheep and goats are exported annually. Subsistence crops include millet, sorghum, corn, sweet potatoes, and yams. Cash crops are mainly peanuts (96,000 metric tons in 1961), cotton, rice, shea nuts, sesame, and sisal. Proved mineral deposits include gold, manganese, bauxite, and copper, but only a small amount of gold is extracted. Fishing is of economic importance. Industries include chiefly the processing of agricultural oils, cotton ginning, the manufacture of sisal twine, and handicrafts.

Foreign Trade.—Total exports, 1961: 882 million francs CFA; imports, 7,004 million. The chief export was live animals. Ghana was the principal customer; principal suppliers were France and Ghana. Much of Upper Volta's trade is with Ivory Coast but is not included in trade statistics.

Events, 1962.—Upper Volta continued to develop close ties with neighboring Ghana. The two countries had removed custom barriers and other trade restrictions in 1961, and they announced on Feb. 9, 1962, that an agreement had been reached to permit the free movement of peoples and goods in transit. The development was regarded as a preliminary step toward Upper Volta's eventual membership in the Union of African States, of which Ghana is the leading member.

Closer relations with Mali were achieved through the visit of Mali President Modibo Keita to Upper Volta in late March. In a joint communiqué, Presidents Yaméogo and Keita declared that their countries would follow a joint diplomatic policy as far as was possible.

As a further step toward complete independence, President Yaméogo, on March 9, called for the removal of all French troops and bases from Upper Volta. In late 1961, France transferred its gendarmerie, consisting of Voltaic officers in its colonial army, as well as its barracks in Ouagadougou and Bobo-Dioulasso, to the Upper Volta government. The national Army of Upper Volta was established in December 1961.

J. L. L.

URANIUM

In 1961, United States production of uranium oxide (U_3O_8) was 49% of world output (44% in 1960), according to the U.S. Bureau of Mines. Domestic output of uranium ore mined from over

1,000 mines totaled 8,041,329 short tons valued at $148 million, compared with 7,970,221 tons valued at $152.2 million in 1960. The yield of concentrates (from 26 mills) was 17,348 tons valued at nearly $290 million, compared with 17,646 tons valued at $330 million in 1960. The additional output of 51 tons of U_3O_8 in 1961 and 114 tons in 1960 came from processing phosphate rock in the eastern United States.

Uranium ore was produced by 13 states in 1961. These states, in the order of value of mine production, were: New Mexico ($62,482,000); Wyoming ($28,218,000); Utah ($25,734,000); Colorado ($21,509,000); Arizona ($4,965,000); Washington ($3,582,000); and Texas, South Dakota, Alaska, Oregon, Idaho, Montana, and Nevada ($1,809,000).

Uranium from foreign sources supplied 43% of the United States requirements in 1961, against 48% in 1960. Imports totaled 12,915 tons of contained U_3O_8, of which Canada supplied 8,735 tons. The remainder came from Australia, Belgium, the Republic of the Congo (Léopoldville), Portugal, and South Africa.

On Sept. 26, 1961, President Kennedy increased the quantity of enriched uranium to be made available for peaceful uses, domestically and abroad, from 100,000 to 165,000 kilograms of contained uranium-235.

As of Dec. 31, 1961, the United States uranium reserve was estimated at 74 million short tons containing 0.28% of U_3O_8, a decrease of about 8 million tons from the Dec. 31, 1960, estimate. In addition, approximately 1.3 million tons of ore was in government and private stockpiles.

World Production.—In 1961 the total free world output of uranium oxide was 35,850 short tons, 12% less than the 40,740 tons produced in 1960. Of the 1961 total, North America provided about 75% (United States, 48.5%; Canada, 27.4%). Of the eight other producing countries, South Africa supplied 5,468 short tons; Australia, 1,400 tons; and France (including estimates from the Malagasy Republic and Gabon), 1,637 tons. Under the terms of new arrangements reported by the South African Atomic Energy Board, that country will continue to produce uranium until 1970. In the first half of 1962, South Africa's output of uranium oxide was 2,492 short tons, 15.6% less than the 2,954 tons produced in the same period of 1961.

(See also Atomic Energy and the Index entry, *Uranium.*)

URBAN PLANNING AND RENEWAL. See City Planning; Housing.

URBAN TRANSIT

As of Jan. 1, 1962, the urban transit industry in the United States was composed of 1,247 operating companies: 1,217 were engaged exclusively in the operation of motorbuses; 12 companies had composite trolley coach and motorbus fleets; 15 had composite fleets including motorbuses, electric railway cars, and/or trolley coaches; and 3 companies were using railway facilities exclusively in passenger service. The 6 rapid transit systems (elevated and subway operations), are included in the foregoing. Companies engaged exclusively in electric railway freight and switching were eliminated from industry statistics, effective Jan. 1, 1961.

During 1962 the transit industry operated nearly 2.1 billion miles and carried more than 8.7 billion passengers. Some 116,046 miles of route were served by 63,730 passenger vehicles. The facilities to furnish the service required an investment of $3.9 billion. The average annual compensation for each employee during 1962 was $5,820. The total wages and salaries of employees amounted to $857 million.

U.S. URBAN TRANSIT INDUSTRY

	Calendar year 1962 (preliminary)	Calendar year 1961 (final)
Results of Operation:		
Operating revenues	$1,387,460,000	$1,389,700,000
Operating expenses[1]	1,296,000,000	1,295,770,000
Operating taxes[2]	66,960,000	67,330,000
Net operating revenues[3]	$ 24,500,000	$ 26,600,000
Operating Statistics:		
Number of passengers (total)	$8,742,235,000	$8,883,000,000
Vehicle miles operated	2,046,300,000	2,077,100,000
Route miles operated[4]	116,046	116,118
Passenger vehicles owned[4]	63,730	64,012
Employees (average)	147,300	151,800
Total payroll	$ 857,000,000	$ 856,400,000

[1] Including depreciation. [2] Except federal income and excess profits taxes. [3] Before income deductions and federal income and excess profits taxes. [4] As of December 31.

Material, supplies, and other services called for a further expenditure of $439 million. Operating taxes, including all taxes except federal income taxes, amounted to $67 million in 1962.

A. W. Baker,
General Secretary, American Transit Association.

URUGUAY

The Republic of Uruguay, with an area of 72,172 square miles, is the smallest country in South America. It lies between Argentina and Brazil on the South Atlantic coast. In 1962 its estimated population was 2,650,000. Montevideo, the capital, has nearly half this total, while Paysandú has about 43,000, Salto 40,000, and Mercedes 24,000. The official language is Spanish. About 85% of the population is white; most nonwhites (Negro, 2%; mestizo, 13%) live in the interior. The average standard of living is the highest in Latin America, but poverty is increasing widely.

Government.—The 1951 constitution provides for the exercise of executive power by the 9-member National Council of Government (NCG). The leading party by law holds 6 seats, and the second party 3 seats; in the 1959–63 term they were the Blanco (or National) and the Colorado parties, respectively. Faustino Harrison became presi-

Draped with black funeral crepe, the last streetcar to operate in Washington, D.C., makes final run on January 27.

WIDE WORLD

dent of the NCG and titular chief of government for one year on March 1, 1962, succeeding Eduardo Víctor Haedo. The cabinet is composed of nine executive department heads or ministers. The bicameral General Assembly comprises a 31-member Senate and a 99-member Chamber of Deputies; it legislates, can override NCG vetoes, and can interpellate ministers. The Assembly also elects the 5-member Supreme Court of Justice. (See also below, *Events, 1962.*)

A principal governmental problem is Uruguay's overgrown and inefficient bureaucracy. More serious is the diffusion of power and responsibility resulting from the use of the NCG. Uruguay's principal asset is its high level of true political democracy and freedom. The country is highly socialized, with very broad social welfare programs and government ownership of most public utilities, three of the largest banks, and several important businesses.

Education and Religion.—Compulsory free public primary education was established in 1877. About 57% of the school-age population attend school. In 1960 there were 15,433 students and 1,600 teachers in the University of the Republic in Montevideo. In 1958 there were 1,757 government primary schools (227,000 pupils), and 317 government and private secondary schools (92,500). About 85% of the population is literate. In 1960 the 27 daily newspapers had a total daily circulation of 750,000, the highest per capita figure in Latin America.

Religious freedom is complete, and many Protestant sects hold services. About 90% of the population is nominally Roman Catholic.

Finance.—The peso is the monetary unit. In April 1962 it was effectively devalued to an official rate of 10.40 pesos to U.S.$1. On Dec. 31, 1962, the open market exchange rate was 10.98. The 1961 central government budget expenditure was 2,217.3 million pesos (1,425.2 million in 1960); revenue was 2,104.7 million (1,454.9 million). Deficits in the government businesses raised the total deficit to 210.1 million pesos. Public debt in domestic circulation totaled 2,331 million pesos on Dec. 31, 1961, with 801.1 million authorized but not issued.

Transportation and Communications.—The government railroad system includes 1,860 miles of lines. A six-year 358 million peso modernization and renovation program for its seriously obsolete physical plant was begun in 1960. Many improvements in track and rolling stock were made in 1962, but a pattern of falling passenger and rising freight traffic is developing.

There are about 5,800 miles of highways of all types, of which 1,320 are all-weather. In 1961 a program to build both trunk and farm-to-market roads in the center of the country was begun with United States aid. On Oct. 27, 1962, the World Bank made an $18.5 million loan for the rebuilding of the 320-mile north-south highway. In 1959, 160,000 motor vehicles were registered, the highest per capita figure in Latin America. There are 500 miles of navigable waterways. The domestic airline, Primeras Líneas Uruguayas de Navegación Aerea (PLUNA) is government owned; it and many foreign airlines provide international service at Carrasco National Airport.

A third television station was opened in Montevideo in April 1962; television sets numbered 70,000 in 1962. There are about 80 radio stations and 800,000 radios (1959); telephones total 141,500 (1960). United States and World Bank loans are aiding the expansion of the telephone system, which is government owned.

Production.—Animal husbandry and agriculture produce about 30% of the national income; about 45% of the population is considered rural. The 1961 census reported 8.7 million beef cattle, 21.5 million sheep, and the use of 82.5% of the productive land for grazing. Stock raising and its derivatives produce about 70% of all agricultural income. Poor weather and poor herd management have resulted in some inadequacy of domestic meat supply, as well as a decrease in exports. Deliveries of cattle to packing plants were encouraged by cash bonuses during part of 1962. A near-record wool clip in 1960–61 fell somewhat in 1961–62, and exports of wool were off 24% to about 156,000 half-ton bales.

Poor-to-dry weather in 1961–62, plus smaller plantings, caused wheat production to fall to 374,700 metric tons (413,600 in 1959–60), and corn to 149,100 metric tons (220,000). However, production of less important crops rose: sunflower seed to 82,800 metric tons (from 57,000), and rice to 61,800 metric tons (53,900). Subsidies for wheat and cotton were announced for 1963.

Mineral deposits are scant. Evidence of petroleum was found in 1962. Low-grade iron ore cannot be mined economically. Only sand, marble, and stone are exploited. Electric power production, in large part hydroelectric, was curtailed by drought conditions (1,017 million kw.-hr. in 1960).

A reported 1,300 businesses were closed in Montevideo from January to April 1962, and major factories, especially textiles, went on short workweeks, as economic stagnation progressed. Living costs rose 10% in 1961 and an additional 5.1% by June 1962, raising the cost-of-living index (1948 = 100) to 580.5. An estimated 100,000 persons were unemployed in Montevideo alone.

Foreign Trade.—Total exports, 1961: $174.7 million ($129.4 million in 1960); imports, $207.6 million ($228.6 million). First-half 1962 figures showed a deficit of $10.7 million, and this was expected to increase sharply in the last half of the year. Leading exports in 1961: wool, $109.8 million ($66.8 million in 1960); meat, $27.4 million ($30.8 million); and hides, $16.2 million ($15.3 million). Imports were raw materials (34.2%), vehicles and parts (16.1%), machinery and apparatus (13.5%), and fuels and lubricants (12.9%). Principal buyers of exports in 1961 were Great Britain (24.2%), the United States (13.5%), Netherlands (11.4%), and West Germany (8.5%). Principal suppliers in 1961 were the United States (22.6%), West Germany (12.5%), Great Britain (10.3%), and Brazil (8.4%).

Events, 1962.—Government economic reforms were found to be continuing satisfactorily by the International Monetary Fund (IMF), which in October renewed its $30 million standby credit. But most observers found much evidence that Uruguay's economy was in great difficulty and that the IMF views were self-deceiving. A government deficit of 350 million pesos was expected for 1962. The government concluded several loans with the Inter-American Development Bank, as well as several loans with the Alliance for Progress, which were partly intended as make-work projects. In March, a four-point plan for economic development under the Alliance was presented. It involved the creation of a national planning board, new statistical services, economic cooperation with other countries, and development of a 10-year development program. The government also had an extensive program of aid to agriculture and of land reform.

In the quadrennial election held on November 25 the Blanco Party won a narrow victory over the Colorado Party to retain control of the National Council of Government, although it lost its majorities in both houses of Parliament. The voters rejected a proposition to return the country to a one-man presidential form of government.

Uruguay was one of the few Latin American governments that maintained relations with Cuba, but became very critical of Cuban actions in late 1962. Anti-Semitic terrorist groups were active in Montevideo in August. Membership was maintained by Uruguay in the Latin American Free Trade Area (LAFTA), but impatience was evidenced at the slowness of negotiations and mutual concessions.

UTAH

A Western state of the United States, Utah ranks 11th among the states in area (land, 82,339 square miles; inland water, 2,577) and 38th in population (967,000 on July 1, 1962, an 8.6% increase from the 1960 census figure of 890,627). Urban places with populations above 7,500 in 1960:

Bountiful	17,039	Ogden	70,197
Brigham City	11,728	Orem	18,394
Cedar City	7,543	Provo	36,047
Clearfield	8,833	Roy	9,239
Kearns (unincorporated)	17,172	Salt Lake City (*capital*)	189,454
Layton	9,027	South Salt Lake	9,520
Logan	18,731	Springville	7,913
Murray	16,806	Tooele	9,133

Government.—Chief executive and judicial officers in 1962 included George D. Clyde (Republican), governor, serving a four-year term; Lamont F. Toronto, secretary of state; Sharp M. Larsen, treasurer; Sherman J. Preece, auditor; A. Pratt Kesler, attorney general; Marion Merkley, superintendent of public instruction; and Lester A. Wade, chief justice of the 5-member Supreme Court.

The Utah Legislature, which convenes in odd-numbered years, comprised 14 Democrats and 11 Republicans in the Senate in 1962 and 36 Democrats and 28 Republicans in the House of Representatives.

Finance.—In the 1961 fiscal year, revenue of $227,175,092 included $105,304,061 from state taxes and $49,298,004 in federal funds. Chief tax yields were the 2% general sales tax ($29,434,184) and taxes on individual incomes ($17,061,792) and motor fuels ($19,588,234). Spending of $243,100,636 included $84,520,513 for education, $30,114,325 for health, welfare, and safety, and $52,739,864 for highways.

Education.—In the fall of 1962, public elementary schools staffed by 5,123 teachers enrolled 152,923 pupils; secondary schools with 4,309 teachers enrolled 105,403; and (fall 1961) parochial schools with 147 teachers enrolled 4,812. College enrollment (fall 1961) totaled 35,574.

Estimated public school spending in the 1961–62 school year totaled $111 million, including current expenditures of $81.28 million ($347 per pupil) and capital outlays of $27 million. Revenue of $109,275,000 was drawn chiefly from state funds ($48 million) and local districts ($50 million). Teachers' salaries averaged $5,066 (high school, $5,100; elementary, $5,000). Actual spending for higher education (1961 fiscal year) amounted to $34,999,000.

Public Assistance.—In the 1962 fiscal year, public assistance payments to a monthly average of 31,489 persons totaled $18,035,121. This amount included $6,951,222 for dependent children and $6,634,821 for the aged.

Transportation and Communications.—With 316 miles of highway construction and reconstruction completed during 1961, *highways and roads on* Jan. 1, 1962, totaled 34,514 miles (19,118 surfaced). These served 461,445 *motor vehicles* (as registered Dec. 31, 1961), including 343,235 automobiles. Operating in the state were (1961) 8 *railroads* (using 1,759 line miles of track); (1962) 5 regularly scheduled *airlines;* and 48 commercial and municipal *airports and airfields.*

Communications media included (1962) 30 AM and 2 FM *radio stations;* 5 VHF *television stations;* 5 daily *newspapers* (circulation, 242,402) and 51 other newspapers (111,284); and (January 1) 111,800 business and 274,800 residential *telephones.*

Labor Force.—Nonagricultural employment in the state in 1961 averaged 273,500, compared with 264,800 for 1960. Of nonfarm employees in 1961, 23.9% were in government services, 22% in trade, and 18.2% in manufacturing. Insured unemployment averaged 7,000 in 1961, compared with 6,000 for 1960.

Manufacturing.—Manufacturing engaged 44,772 workers in 1960, including 29,639 in production, and provided a payroll of $244,264,000. Adjusted value added by manufacture totaled $544,644,000. The three leading industries in 1960 were primary metals (8,516 workers who received $59,033,000 in wages and added $196,194,000 in adjusted value by manufacture); food and kindred products (9,277; $38,963,000; $90,873,000); and transportation equipment (4,887; $32,891,000; $63,692,000).

Mining.—In 1961, Utah ranked 14th among the states in the value of its mineral output, with 2.24% of the national total. Metals accounted for 57% of the total value, of which copper supplied 31%. The state was second in output of asphalt, copper, gold, molybdenum, and vanadium; third in carbon dioxide, lead, potassium salts, and silver; and fourth in iron ore and uranium.

UTAH MINERAL PRODUCTION, 1961
(In short tons, except as noted)

Mineral	Quantity	Value
Asphalt (gilsonite)	...[1]	...[1]
Coal	5,159,000	$ 31,126,000
Copper (recoverable content of ores)	213,534	128,120,000
Gold (ounces)	342,988	12,005,000
Iron ore, usable (long tons)	3,533,000	25,493,000
Lead (recoverable content of ores)	40,894	8,424,000
Lime	142,000	2,626,000
Natural gas (million cu. ft.)	57,175	8,976,000
Petroleum (1,000 bbl.)	33,118[2]	91,075,000[2]
Salt (common)	249,000	3,187,000
Sand and gravel	14,060,000	8,448,000
Silver (ounces)	4,798,000	4,435,000
Stone	1,808,000	3,219,000
Uranium ore	1,098,783	25,734,000
Zinc (recoverable content of ores)	37,239	8,565,000
Other minerals	...	46,825,000
Total	...	$406,617,000[3]

[1] Figure withheld to protect individual company's confidential data. [2] Preliminary. [3] Total adjusted to eliminate duplication in the value of raw materials used in the manufacture of cement and lime. (Source: U.S. Bureau of Mines.)

Agriculture.—Cash farm income for the first nine months of 1962 (excluding government payments) totaled $110,622,000, compared with $106,843,000 for the corresponding period of 1961. For the full year 1961, income comprised $122,920,000 from livestock, $32,575,000 from crops, and $8,041,000 in government payments. Principal income sources in 1961 were cattle, $44,439,000; wholesale milk, $29,093,000; and turkeys, $14,163,000.

The state's 18,000 farms in 1959 had an acreage of 12,689,000 (1,062,000 in harvested cropland). Livestock on farms on Jan. 1, 1962, included 698,000 cattle, 1,258,000 sheep, and 1,678,000 chickens.

UTAH CROP STATISTICS

Crop (and unit of production)	Average 1951–60	1961	Est. 1962
Apples (1,000 bu.)	386	200	430
Apricots (tons)	5,780	2,800	2,100
Cherries (tons)	5,460	4,200	6,600
Hay (1,000 tons)	1,307	1,287	1,371
Peaches (1,000 bu.)	482	210	290
Potatoes (1,000 cwt.)	1,530	1,530	1,305
Sugar beets (1,000 short tons)	454	323	412
Wheat (1,000 bu.)	6,879	4,328	5,446

(Source: U.S. Department of Agriculture.)

Events, 1962.—Republicans made a clean sweep of congressional and state offices in the elections of November 6. U.S. Sen. Wallace F. Bennett, conservative Republican, was reelected over opposition from Democratic Rep. David S. King. Earlier, Bennett had defeated Salt Lake City Mayor J. Bracken Lee, a leader of the far right, in the primary. Democrats lost both their seats in the U.S. House of Representatives. In the 2d District, state Sen. Sherman Lloyd replaced King by defeating Democrat Bruce Jenkins, and in the 1st District Laurence Burton scored over Democratic Rep. Blaine Peterson. In the other statewide contest, Attorney General A. Pratt Kesler was reelected.

The state consolidated its juvenile court system and placed all judges on a full-time basis. Under the new arrangement there are five courts with five judges; previously there were six courts, of which three had part-time judges. The Utah attorney general ruled that the state must provide elementary and high school education for Indians living on reservations, and also provide transportation to and from schools.

Salt Lake City decided to build a dam at Little Dell in Parley's Canyon without help from the federal government. The city found that it could build the structure for $1.5 million, compared with the city's share of $2.2 million if federal assistance were accepted. Work continued during the year on Flaming Gorge Dam in northeastern Utah (see also DAMS).

An earthquake on August 30 caused severe damage in Cache Valley in northern Utah, but no one was injured. Two earthquakes of lesser intensity shook the Salt Lake Valley area, alarming residents, but resulting in only minor damage. Two separate explosions, occurring about two months apart, killed 6 workers and injured 21 at the Backus works of the Hercules Powder Co.

State residents were disturbed over reports of an increase in radioactive iodine in the Salt Lake City milk supply. However, a marked decline in radioactive content each day after the first report prevented the rise of undue alarm.

Sterling M. McMurrin, who resigned as United

States commissioner of education on July 27, returned in September to the University of Utah as professor of philosophy.

A sidelight of the integration crisis at Oxford, Miss., occurred in Salt Lake City when the Hillcrest High School repealed its nickname of "Rebels" (the same as the University of Mississippi's) after the riots. The student council stated, "We found it highly unflattering, considering the actions of the student body at Oxford."

VANCOUVER

Canada's third-ranking city and chief Pacific port, Vancouver, British Columbia, has a population of 384,522 (1961 census) in an area of 44 square miles. Greater Vancouver (pop. 790,165) includes North Vancouver, West Vancouver, Burnaby, Richmond, and the University of British Columbia, and accounts for nearly half the population of the province.

The city government is headed by a mayor and 10 aldermen elected for two-year terms. Mayor Thomas Alsbury completed his fourth year of office in 1962, and was succeeded by Alderman William Rathie.

The civic budget for 1961 totaled $61,571,876, the largest single expenditure being $16,768,754 for the public school system, which is supervised by a 9-member School Board headed by Edythe E. Quinnell. The superintendent of schools is Dr. R. F. Sharp. The cost of operating Vancouver's 25 kindergartens, 78 elementary schools, and 18 secondary schools, attended by a total of 64,196 day pupils, is shared by the provincial government. The city-operated adult day school attracted 1,156 students in its first year of operation, while an estimated 33,000 persons enrolled in night schools. The University of British Columbia had a registration of 12,950 full-time students in the 1961–62 year.

A 7-member Board of Parks and Public Recreation (chairman: E. W. Bowering) is elected for a two-year term. Its budget for 1961 totaled $1,942,836.

Vancouver's port facilities in 1961–62 were taxed to the utmost handling cargoes of lumber destined for the eastern seaboard of the United States, and vast shipments of grains for Japan and the People's Republic of China. As many as seven cargo vessels have lain idle awaiting their turn to enter the crowded docks for loading. Even tankers have been utilized to transport emergency shipments of grain to China. The Greek freighter *Sonic* broke the world's record for a single grain-cargo when she left port for Europe with 1,600,000 bushels of wheat, oats, and rye in her hold. The grain storage problem on the waterfront was eased somewhat by the construction of additional grain elevators to hold a total of 21.7 million bushels. About half of this capacity is owned by the National Harbors Board (Canadian government) and the rest by private firms.

This flourishing activity was stimulated even further by the recent construction of local bulk-loading facilities, thus enabling the port to handle low-priced ore concentrates and coal. Previously, Canadian coal and ores had been loaded for Japan in Seattle and Portland.

Lumber shipments also increased remarkably, largely because the depreciation of the Canadian dollar benefited British Columbia lumbermen at the expense of their Washington and Oregon competitors. Increased exports of grain and lumber and ores have made the Port of Vancouver the largest dry-cargo port on the Pacific coast of North America.

Money by-laws to purchase two large disused golf courses were defeated in the December elections by taxpayers opposed to rising property taxes. The same mood was responsible for the election of Alderman William Rathie, an economy-minded businessman, as mayor. The electorate voted overwhelmingly for the relaxation of Sunday blue laws, the end of which will see theaters, motion picture houses, and other places of entertainment made available to Vancouver citizens on Sunday for the first time.

The city's Fifth International Festival of the Arts opened on July 10 at the new civic-owned Queen Elizabeth Theatre. Much of its varied program was shared with the Seattle World's Fair, and included appearances by several foreign companies: the Comédie Française, of Paris; Japan's Bunraku Doll Theater; and the Bayanihan Philippine Dance Company. At the end of the season, Nicholas Goldschmidt, the artistic director of the

festival, resigned over a matter of program policy and was succeeded by Dino Yannopoulos.

JOSEPH C. LAWRENCE,
Department of History,
University of British Columbia.

VATICAN CITY

The State of the Vatican City is the world's smallest sovereign state, having an area of 108.7 acres and a permanent population of about 1,000. The state is situated within the city of Rome, Italy, and exercises extraterritorial rights over 12 buildings in Rome outside of its boundaries, and over the papal villa in Castel Gandolfo. The Lateran treaties of 1929 and the Italian Constitution of 1947 recognized the Vatican as an independent state. The state maintains nuncios (accredited diplomatic representatives) or apostolic delegates (without diplomatic status) to more than 50 countries.

Pope John XXIII (elected on Oct. 28, 1958) exercises supreme executive, legislative, and judicial power. He is assisted in the government of the state by a pontifical commission headed by Amleto Cardinal Cicognani (appointed Aug. 14, 1961), who also serves as secretary of state. Vatican City has its own currency, postal system, army (Swiss Guards), railway station, observatory, radio station, and newspaper (the semiofficial daily, *L'osservatore romano*).

The Vatican is the administrative center of the Roman Catholic Church, and is the center of Roman Catholic higher education. More than 65 papal educational institutions are located in the state. The economy of the Vatican City is dependent on charitable contributions, supplemented by the sale of postage stamps and tourist mementos, and fees from religious museums and art galleries.

The first session of the 21st Ecumenical Council was held in Vatican City from Oct. 11 to Dec. 8, 1962. (See also JOHN XXIII; RELIGION—*Catholicism;* ROMAN CATHOLIC CHURCH.)

VEGETABLE OILS. See FATS AND OILS.

VEGETABLES

Production of vegetables in the United States in 1962 dropped slightly below the high 1961 level. Output of vegetables for processing rose 13% above that of 1961 to a new record, but production of vegetables for fresh market declined somewhat. Potato production dipped 9% below the 1961 peak, and the dry bean crop was 7% lower than in 1961. A sharp 40% increase was recorded in the production of dry peas, and sweet potato production was 20% higher than the small 1961 total. The index of vegetable production of the Statistical Reporting Service of the U.S. Department of Agriculture was 109 (1957–59 = 100), 2 points below 1961.

The ten principal processing crops reached a record total of 9,263,340 tons in 1962, compared with 8,176,250 in 1961 and the 1951–60 average of 6,958,050. Tomatoes increased 25% to a new high and accounted for 57% of the total for processing. Record crops of beets for canning, sweet corn, and asparagus also were produced. The ten crops were harvested from 316,150 acres. Value of production was $360,289,000, compared with $336,884,000 in 1961, and the 1951–60 average of $276,785,000.

California produced 37% of the processing vegetables in 1961. Other leading states were Wisconsin, 8%, and New York, Ohio, and Illinois, 5% each.

U.S. PRODUCTION OF COMMERCIAL VEGETABLES AND MELONS FOR FRESH MARKET
(1,000 cwt.)

	Average 1951–60	1961	1962
Vegetables:			
Artichokes	343	510	440
Asparagus	1,159	1,093	1,047
Green lima beans	403	409	400
Snap beans	4,946	4,620	4,429
Beets	608	483	421
Broccoli	2,075	2,361	1,940
Brussels sprouts	608	706	688
Cabbage	20,495	19,031	18,648
Carrots	15,567	15,867	16,972
Cauliflower	2,549	2,566	2,518

Production of the 24 principal vegetables for the fresh market in 1962 totaled 169,681,000 cwt., below the 171,123,000 cwt. of 1961, but 4% above the 10-year average. Sweet corn was the only crop to set a new record. The 1962 produc-

U.S. PRODUCTION OF VEGETABLES FOR COMMERCIAL PROCESSING
(In tons)

Vegetable	Average 1951–60	1961	1962
Asparagus	111,490	129,650	133,900
Lima beans (shelled)	96,070	115,710	108,470
Snap beans	332,280	478,020	447,720
Beets (for canning)	154,990	181,560	209,190
Cabbage (for sauerkraut)	195,320	215,700	206,970

Total, 10 crops	6,958,050	8,176,250	9,263,340

(Source: Statistical Reporting Service, U.S. Department of Agriculture.)

tion came from 1,281,140 acres, compared with 1,313,375 the preceding year. The 24 crops were valued at $767,191,000, compared with $733,298,000 in 1961 and the 10-year average of $687,597,000.

California was the leading state in production, with 32% of the United States total. Next in order were Florida, 14%; Texas, 9%; Arizona, 7%; and New York, 6%.

Potatoes.—Smaller acreage and lower yields reduced 1962 production to 268,280,000 cwt., or 9%, below the 1961 record, but 33,856,000 cwt. above the 1951–60 average. Yields averaged 193.7 cwt. per acre, second only to the 196.3 cwt. per acre recorded in 1961. The acreage harvested was 1,385,300, or 7% below 1961 and 1% below average. Production by seasons in 1962 was: winter, 4,160,000 cwt.; early spring, 3,433,000; late spring, 21,690,000; early summer, 12,620,000; late summer, 33,805,000; and fall, 192,572,000. Leading states in production were: Idaho, 47,883,000 cwt.; Maine, 38,955,000; California, 28,148,000; New York, 20,708,000; and North Dakota, 14,820,000.

Sweet Potatoes.—The 1962 crop of 18,451,000 cwt. was 21% larger than that of 1961 and 4% above average. Yields rose to a record 85.1 cwt., 7.8 cwt. above 1961 and 22.9 above average. The crop was harvested from 216,900 acres, compared with 196,700 acres in 1961, but 25% less than average. Louisiana harvested the largest crop among the states, 3,410,000 cwt. Other leaders were: North Carolina, 3,240,000 cwt.; Virginia, 2,667,000; New Jersey, 1,750,000; Texas, 1,530,000; and Georgia, 1,050,000.

Dry Beans.—Production of 18,827,000 bags (100 pounds clean basis) was below the 1961 record by 7%, but 11% above average. Farmers harvested the crop from 1,490,000 acres, 41,000 more than in 1961. The yield of 1,264 pounds per acre, although the third highest ever attained, was 136 pounds less than the 1961 record. Production by leading classes in 1926 was: Pea (navy), 7,006,000 bags; pinto, 4,105,000; Great Northern, 1,485,000; red kidney, 1,479,000; large lima, 950,000; and blackeye, 648,000. Michigan again led the states in production with 7,527,000 bags, followed by California, 3,435,000; Idaho, 2,300,000; Colorado, 1,718,000; New York, 1,274,000; and Nebraska, 1,012,000.

Dry Peas.—A sharp increase in yields and larger acreage pushed 1962 production 40% above that of 1961 and 44% above the 1951–60 average to 4,947,000 cwt. (clean basis). The yield averaged 1,464 pounds per acre, compared with 1,061 in 1961 and the average of 1,194. The 338,000 acres harvested was 4,000 more than in 1961 and 19% more than average. The crop included 2,291,000 bags of Alaska and other smooth green kinds, 1,189,000 bags of White Canada, First and Best, and other yellow and white kinds; and 1,467,000 bags of other peas. Austrian winter peas are not included in the totals. Six states produced the 1962 crop: Washington, 2,812,000 bags; Idaho, 1,821,000; Oregon, 184,000; Colorado, 77,000; North Dakota, 34,000; and Minnesota, 19,000.

Wayne Dexter,
Agricultural Economics,
U.S. Department of Agriculture.

VENEREAL DISEASES

In the year ending June 30, 1962, state health departments reported 124,188 cases of syphilis, 260,468 cases of gonorrhea, and 2,239 cases of other venereal diseases to the U.S. Public Health Service.

Cases of syphilis in the recently acquired, highly infectious stage of the disease increased from 18,781 cases in the fiscal year 1961 to 20,084 cases in 1962. This is the greatest number of primary and secondary syphilis cases reported in the United States since 1950.

Cases of syphilis in the later stages of the disease numbered 104,104—approximately the same as in the preceding year. The 260,468 cases of gonorrhea reported in 1962 were slightly less than the number reported in the preceding year, and represent a reversal of the upward trend which began in 1957.

Venereal disease among young adults is a particularly acute problem. In 1961 the 142,817 cases of gonorrhea reported among persons 15–24 years of age accounted for 54% of all cases reported; 44% of infectious cases of syphilis were reported among persons aged 15–24. Gonorrhea and infectious syphilis cases per 100,000 population were 599.1 and 36.9, respectively, among persons aged 15–24, compared with rates of 145.8 and 11.0 per 100,000 in the total population.

Mortality and Insanity.—Deaths and insanity due to syphilis continued the declines which began after the establishment of the national venereal disease control program in 1937. Deaths due to syphilis decreased from 7,568 in 1950 to 3,070 in 1960, and first admissions to mental institutions with psychoses due to syphilis decreased from 3,454 to 742 in 10 years.

Disease Control.—In 1962, 6,296 of the 20,084 infectious syphilis cases reported were placed under treatment through the examination of sex contacts of infected persons. Another 4,727 cases of infectious syphilis were placed under treatment as a result of the follow-up of positive serologic tests for syphilis from health department, hospital, and private laboratories. Tracing of sex contacts of primary and secondary syphilis cases reported by private physicians has contributed significantly to disease control. In 1962, 1,419 such contacts with primary or secondary syphilis were brought to treatment as a result of interviews with patients reported by private physicians.

A total of 344,782 persons were examined for a venereal disease as a result of health department casefinding activity in 1962. Of the persons examined, one out of 5 was diagnosed as infected and treated for a venereal disease, and one out of 10 was given preventive treatment for exposure to an infectious venereal disease.

Research.—A simple, accurate, and rapid screening test for syphilis and other treponematoses, known as the RPR Card Test, has been developed. This test is accomplished without the use of usual laboratory equipment and lends itself to field or office use. A plasma collection slide is used for processing finger-stick blood and converting it to plasma. The plasma is then transferred to a plastic-coated card, where it is mixed with a stable antigen suspension containing charcoal. Results are read with the naked eye after the specimen has been shaken for a short time. Reactive tests must be confirmed by a standard serologic test.

An outstanding development was the demonstration that the chick embryo may be used to maintain and regain the infectiousness of *Neisseria gonorrhoeae* for man.

Chief, Venereal Disease Branch,
U.S. Public Health Service, Atlanta, Ga.

VENEZUELA

The northernmost country of South America, the Republic of Venezuela has an area of 352,153 square miles, and a coastline on the Caribbean Sea and the Atlantic Ocean of 2,189 miles. Increasing at an annual rate of 3.36%, Venezuela's population (1962 est.) totals 7,788,000, of whom approximately 700,000 are foreigners (mainly Spaniards, Italians, Americans, and Portuguese). Principal cities and populations (1962 est.) are: metropolitan Caracas, 1,300,000; Maracaibo, 440,000; Barquisimeto, 198,000; and Valencia, 165,000. Ethnically the population consists of mestizos (65%), whites (20%), Negroes (8%), and Indians (7%). Principal regions, with percentages of total area and population are: the Guiana Highlands, with 45% of Venezuela's area and 2% of the population; the llanos or plains, 33% and 25%; the mountains, 12% and 65%; and the coastal zone, 10% and 8%. Spanish is the official language.

Government.—Venezuela's 26th constitution, promulgated on Jan. 23, 1961, reaffirmed a federal, republican form of government. The country is divided into 20 virtually powerless states, 3 federal territories, and 72 island dependencies. The president (Rómulo Betancourt, installed Feb. 13, 1959) is elected by a majority of the popular vote for a five-year term. The bicameral Congress is composed of a 51-member Senate indirectly selected by the state and territorial legislatures, and a 133-member Chamber of Deputies elected on the basis of one representative for each 50,000 persons. The term of office for both houses is 5 years. The majority party, Democratic Action (AD) is split into two factions: the Old Guard (supporting President Betancourt) and ARS (a more leftist element). The president's wing of the party governs by means of a coalition with the Christian Socialist Party (COPEI). Principal political parties and the number of seats held in the Chamber of Deputies: Democratic Action (Old Guard), 34; Democratic Action (ARS), 24; COPEI, 19; Democratic Republican Union (URD), 34; Movement of the Revolutionary Left (MIR), 15; and Communist, 7.

The highest court is the Supreme Court of Justice, whose nine judges are appointed by Congress for staggered nine-year terms.

Education and Religion.—School enrollment, 1961–62: 1,529,000, about 51% of the school-age population. Enrollment by type of school, 1961–62: primary, 1,324,000; secondary, 110,000; commercial and technical, 40,000; normal, 30,000; higher, 25,000. About 25% of the school population attends private schools, which are mostly under Roman Catholic auspices. The illiteracy rate was 26.8% in 1961, a drop of 30% from 1958. Principal religion: Roman Catholicism. Freedom of religion is constitutionally guaranteed.

Finance.—Government revenue, 1961: 3.288 billion bolívares (Bs); expenditure, Bs3.397 billion. At the official rate, 3.35 bolívares equal U.S.$1 (see below *Events, 1962*). Estimated revenue and expenditure for 1962 were balanced at Bs5.942 billion. Gold reserves: $401 million in June 1962 ($514 million in June 1961). Foreign exchange holdings: $100 million in June 1962 ($101 million in June 1961). National debt: Bs2.354 billion as of December 1961.

Transportation and Communications.—Transport networks (miles, 1962): railroads, 613 (77 of which are under construction); roads, 26,000, of which 8,500 are paved; roads completed (1959–61), 996 new and 1,145 paved; roads under construction (1962), 590 new and 1,058 being paved. Merchant marine, 1960: 320,000 gross registered tons. Air service is provided by Venezolana Internacional de Aviación, three smaller Venezuelan airlines, and nine foreign companies. Other communications data for 1960: passenger cars, 268,693; commercial vehicles, 198,000; telephones, 202,005; radio stations, 65; television stations, 13; radios, 1,250,000; and television sets, 263,000 (1962). There are 29 daily newspapers (7 in Caracas), and 65 weekly papers (8 in Caracas).

Economic Indicators.—The gross national product for 1961 totaled Bs26.8 billion, an increase of 1.4% over 1960. The rapid population increase, however, caused a decrease of 1.2% in per capita income. Changes in composition of the gross domestic product in 1961: petroleum growth remained steady at 8%; mining and construction declined by 28%; and manufacturing was up 9%. Consumer price index (1958 = 100): 106 in 1961 (109 in 1960). Cost-of-living index (1958 = 100): 103 in December 1961 (108 in December 1960). Index of mining production (1958 = 100): 112 in 1961 (115 in 1960). Index of manufacturing production (1958 = 100): 125 in 1961 (116 in 1960). About 12% of the labor force, or 280,000 persons, were unemployed in 1962.

Manufactures and Minerals.—Petroleum and other minerals account for 24% of the gross national product, and employ 2% of the labor force. Average daily oil production of the one government-owned and 17 foreign oil companies through August 1962: 3.2 million barrels (2.9 million barrels in same period in 1961). The largest producer is the Creole Petroleum Corporation, with a daily production of 1,274 million barrels. Total gross income from petroleum, 1959–61: Bs7.59 billion, from which the Venezuelan government derived Bs2.79 billion, or 66% of the total net income. Other chief mineral products (metric tons, 1961): coal, 30,960 (36,840 in 1960); iron ore, 14,568,000 (19,688,000); natural gas, 4,812 million cubic meters (4,584 million); and diamonds, 134,175 carats (63,309).

At Puerto Cabello, Venezuela, a priest supports a rifleman wounded in the revolt on June 2–4.

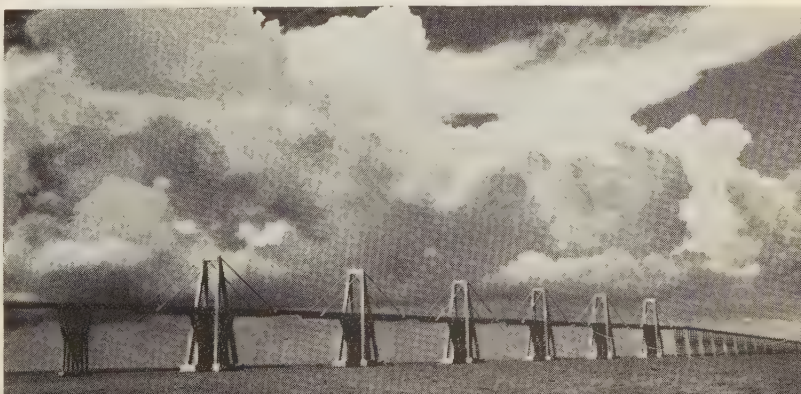
WIDE WORLD

Industrial output in 1961 was up 9% over 1960. New manufacturing investment in 1961 totaled $218 million, and 1,395 companies were formed. Chief industrial products (metric tons, 1961): cement, 1,512,000 (1,488,000 in 1960); cotton yarn, 8,580 (7,848); woven cotton fabrics, 33,720 (33,120); and electricity, 3,384,000 kw.-hr. (2,956,000).

Agriculture.—About 33% of the labor force is engaged in agriculture, which accounts for 6% of the gross domestic product. Of the 73 million acres of arable farmland, 10% is under cultivation. Since 1959, 3.5 million acres have been distributed to 52,251 farmers under the agrarian reform program. Beef is the principal farm product in terms of value and land use. Cattle in 1961 numbered 7.16 million. Chief crops (tons, 1962 est.): cacao, 14,650 (13,225 in 1961); coffee, 850,000 bags of 132.276 pounds each (850,000); tobacco, 11,765 (12,065); cotton, 35,000 bales (30,000); sesame, 28,212 (22,400); corn, 14,000 in 1961 (17,300 in 1960); sugar, 263,000 in 1961 (259,000).

Foreign Trade.—Total exports, 1961: Bs8.091 billion (Bs8.147 billion in 1960); imports, Bs3.474 billion (Bs3.552 billion in 1960). Principal exports: petroleum (Bs7.441 billion in 1961), iron ore, coffee, and cacao. Principal imports (with United States share in millions of dollars): vehicles, 207.8; metals and manufactures, 46.1; textile fibers, 31.4; and wood and paper, 23.0. The United States bought from Venezuela a total of $902.3 million in 1961 (49.1% of Venezuela's exports). West Germany (9.5%) and Great Britain (6.1%) were other leading trading partners.

Events, 1962. *Economic Developments.*—To obtain revenue to meet the cost of financing Alliance for Progress projects, the government in April decreed an end to the importation of all but 105 items purchasable at the favorable controlled rates of 3.35 bolívares to the U.S. dollar, making it necessary to import at the official "free" rate of 4.54 bolívares to the dollar. The decree aroused considerable criticism in business and labor circles, and resulted in the censure of Finance Minister Andrés Germán Otero by the Chamber of Deputies. The reform was expected to produce 200 to 300 million bolívares in government revenue. Other developments included the creation of a 10-member For-



Spanning Lake Maracaibo, the 5½-mile-long Rafael Urdaneta Bridge was officially opened in August.

EMBASSY OF VENEZUELA—INFORMATION SERVICE, WASHINGTON, D.C.

eign Trade Council to assist in planning a foreign commerce policy; the inauguration of a Loan Investment Control Commission to supervise the expenditure of public funds derived from foreign loans; the formation of Corporación de Turismo (with a capital of 50 million bolívares) to assist private enterprise in the development of the tourist industry; the establishment of Televenca to operate all telephone communications; and the announcement by the government that in line with its policy of "Venezuelization" of the oil industry it would grant no further petroleum concessions to foreign firms. The Chase Manhattan Bank of New York's offer to purchase 49% of the stock of Banco Mercantil y Agricolo was oversubscribed, and the Inter-American Development Bank opened its first Latin American branch in Caracas.

Military revolts and the exchange reform failed to impede industrial expansion. Several new industries backed by foreign capital were built in 1962, and the government-owned steel plant at Matanzas began to produce ingots in early July, processing ore from Cerro Bolívar. The Creole Petroleum Corporation announced it would increase its investment by 50% during 1962. President Betancourt's annual message to Congress in March projected a 4-year development plan (1962–65) which emphasized the need for 500,000 new jobs by 1965. Other 1965 goals were annual growth increases of 11.1% for industry and 9.8% for agriculture. Agrarian reform continued with the distribution of 157,556 acres to 8,000 families during the first half of 1962. A cooperative center for the raising of livestock by 5,000 families was set up in the state of Guárico. The Bank of Agriculture and Cattle announced plans to import $10 million worth of agricultural machinery.

International loans for the year included $50 million from the Inter-American Development Bank for urban housing, cattle breeding, water and sanitation; and $7.5 million from the Export-Import Bank of Washington for small industry. Venezuela's most pressing economic problems in 1962 were the lack of adequate housing (40% of the population were living in substandard dwellings) and chronic unemployment.

Political Developments.—President Betancourt's Democratic Action party has suffered two splits since he came to power in 1959. In 1960 a group of Marxist-oriented members left to form the Movement of the Revolutionary Left, and in 1962 other dissatisfied members formed a faction called ARS. Among other things, ARS condemned the partial suspension of the constitutional guarantees and the Democratic Action–Christian Socialist coalition. In separate conventions in January 1962, the Betancourt supporters (called the Old Guard) and ARS expelled each other. The party split was extended to the labor movement, as each faction sought (and claimed) to control the Venezuelan Federation of Labor, the state peasant leagues, and Fedepetrol, the oil workers union.

By November, two men had announced their candidacies for president in the elections scheduled for late 1963: Jovito Villabla supported by the Democratic Republican Union (URD), and Adm. Wolfgang Larrazábel, supported by the National Independent Electoral Movement and the Popular Democratic Front. President Betancourt cannot constitutionally succeed himself.

Constitutional guarantees were suspended during most of the year (as they have been since November 1960) as the government sought to deal with continued violence, terrorism, and guerrilla activity. The peace was disturbed in January when the government decreed compulsory public liability and property damage insurance (later repealed by Congress). Student participation in political demonstrations resulted in the closing of the schools for long periods. Two unsuccessful navy-led revolts, one on May 4–5 in Carúpano, the other on June 2–4 in Puerto Cabello, took over 400 lives. Power plants and pipelines of the Creole Petroleum Corporation were sabotaged by Communists in October and November during the Cuba crisis.

Congress convened in March 1962 in an atmosphere of hostility and tension. Although the ADCOPEI coalition maintained its control over the Senate, the ARS defection brought the Chamber of Deputies under the control of the opposition parties. Considerable discord between the two houses was generated over such matters as assigning responsibility for the two revolts and over the detention of several state legislators and a Communist deputy (Eloy Torres) for antigovernment activity. The opposition parties, solidly against the government and extremist in nature, inclined to irresponsible attacks upon it. Their continued agitation led President Betancourt on October 15 to ask the Supreme Court to rule on the legality of outlawing the MIR and the Communist parties.

In the wake of the Cuban crisis in October, the government was authorized to proclaim martial rule and call up reserves. These measures were rescinded on November 24.

Foreign Affairs.—In January the government renewed diplomatic relations with the Dominican Republic and El Salvador, but withdrew its embassy from Buenos Aires in March in protest over the military removal of Argentine President Arturo Frondizi. At the same time it notified the Organization of American States (OAS) that it would no longer recognize regimes which came to power through illegal means. In July it called on the OAS to convene a conference of foreign ministers to consider the military takeover in Peru. During the year, Venezuela joined in efforts to condemn a Cuban attempt to secure a ruling from the International Court of Justice on the legality of Cuba's ouster from the OAS, and it placed before the United Nations a 19th century claim to two thirds of the territory of British Guiana, which was seeking independence.

VERMONT

A New England state of the United States, Vermont ranks 43d among the states in area (land, 9,276 square miles; inland water, 333) and 47th in population (390,000 on July 1, 1962, virtually unchanged from the 1960 census figure of 389,881). Cities, towns (T), villages (V), and unincorporated places (U) with populations above 7,000 in 1960:

Barre	10,387	Montpelier (*capital*)	8,782
Bennington T.	13,002	Rutland	18,325
Bennington V.	8,023	St. Albans	8,806
Brattleboro T.	11,734	St. Johnsbury T.	8,869
Brattleboro (U)	9,315	Springfield T.	9,934
Burlington	35,531	Winooski	7,420
Essex T.	7,090		

Government.—Chief executive and judicial officers in 1962 included F. Ray Keyser, Jr. (Republican), governor, serving a two-year term; Ralph A. Foote, lieutenant governor; Howard E. Armstrong, secretary of state; George H. Amidon, treasurer; David V. Anderson, auditor; Charles J. Adams, attorney general; A. John Holden, Jr., commissioner of education; and Benjamin N. Hulburd, chief justice of the 5-member Supreme Court.

The Vermont General Assembly, which convenes in odd-numbered years, comprised 23 Republicans and 7 Democrats in the Senate in 1962 and 190 Republicans, 52 Democrats, and 4 others in the House of Representatives.

Legislation, 1962.—Governor Keyser called a special session of the General Assembly for July 25, unsuccessfully attempting to limit its actions to reapportionment of the Senate (see below, *Events, 1962*). The secretary of state held that the session was a continuation, but after the House pronounced it a special session any bills could be introduced. Two weeks and a day later, the acrimonious session adjourned. A compromise bill granted Chittenden County one new senator at the expense of Rutland County, but limited the bill's effectiveness to Dec. 31, 1963, thus sustaining the issue for the January 1963 session.

Additional action was hastily taken on the following items: a legislative committee was appointed to investigate the closed Rutland Railroad and its problems, with a mandate to make a final report, including proposed legislation, by February 1963 (see below, *Events, 1962*); corrections were made in statutes granting tax exemptions to veterans and their widows and orphans; and monthly payments for old-age assistance, aid to the blind, and aid to the handicapped were raised to $80. No action was taken on the "time lock" for constitutional amendments, thus preventing change until 1971. Rural representatives prevented enactment of a liberalized bond voting procedure in large cities and towns.

Finance.—In the 1962 fiscal year, revenue of $112,520,652 included $49,457,805 from state taxes and $39,355,759 in federal funds. Chief tax yields were from individual and corporate incomes ($15,252,355), motor fuels ($9,278,746), and licensing ($9,391,607). Spending of $117,771,716 (including income from bond issues) was primarily for education ($15,105,590), health, welfare, and safety ($22,455,880), and highways ($45,242,041).

Education.—In the fall of 1962, public elementary schools staffed by 2,229 teachers enrolled 53,650 pupils; secondary schools with 1,308 teachers enrolled 24,428; and private and parochial schools (1961–62) enrolled 17,711. College enrollment (1961–62) totaled 10,302 in 17 institutions, including 3 junior colleges and 14 senior colleges and universities.

Estimated public school spending in the 1961–62 school year totaled $31,215,000, including current expenditures of $26,350,000 ($356 per pupil) and capital outlays of $4 million. Revenue of $38.5 million was drawn chiefly from state funds ($7 million) and local districts ($23.1 million). Teachers' salaries (1961–62) averaged $4,779.74 (high school, $5,120; elementary, $4,505). Actual spending for higher education (1961 fiscal year) totaled $11,239,000.

Public Assistance.—In the 1962 fiscal year, public assistance expenditures totaled $7,229,470, including $4,775,874 for the aged and $1,717,780 for dependent children.

Transportation and Communications.—A total of 186 miles of highway construction and reconstruction were completed in the 1962 fiscal year. *Highways and roads* on Jan. 1, 1962, totaled 13,656 miles (4,267 surfaced). These served 173,295 *motor vehicles* (as registered in fiscal 1962), including 141,834 automobiles. Operating in the state (1962) were 10 *railroads* (using 811 line miles of track); 2 regularly scheduled *airlines;* and 20 commercial and municipal *airports and airfields.*

Communications media included (1962) 1 FM and 15 AM *radio stations;* 1 VHF *television station;* 9 daily *newspapers* (circulation, 95,260) and 24 other newspapers (43,895); and (January 1) 37,100 business and 101,200 residential *telephones.*

Labor Force.—The state's labor force in mid-July 1962 included 22,300 agricultural workers. Nonagricultural wage and salary employees totaled 115,400, compared with 113,150 a year earlier and an average of 105,950 for the full year 1961. Of nonfarm wage and salary employees, 31.2% were in manufacturing, 18.9% in service industries, and 18.5% in trade. Total unemployment in mid-July 1962 stood at 7,500, compared with 9,300 a year earlier.

Manufacturing.—Manufacturing engaged 34,804 workers in 1961, including 26,796 in production, and provided a payroll of $158,993,000. Adjusted value added by manufacture totaled $283,693,000.

The leading industries in 1961 were nonelectrical machinery (5,727 workers who received $32,072,000 in wages and added $54,329,000 in adjusted value by manufacture); paper and products (2,811; $12,702,000; $28,983,000); and stone, clay, and glass products (3,535; $17,510,000; $23,221,000).

Mining.—In 1961, Vermont ranked 44th among the states in the value of its mineral output, with 0.13% of the national total. The total value of $24,283,000 increased 6% over that of 1960 due to the rise in value of sand and gravel and in the output of stone (valued at $18,715,000). Vermont was first in the production of asbestos.

WIDE WORLD

Philip H. Hoff and his wife read congratulatory telegrams at Burlington on November 7, the day after his election as the first Democratic governor of Vermont since 1854.

Agriculture.—Cash farm income for the first nine months of 1962 (excluding government payments) totaled $94,256,000, compared with $94,995,000 for the corresponding period of 1961. For the full year 1961, income comprised $111,478,000 from livestock, $15,045,000 from crops, and $1,907,000 in government payments. Principal income sources in 1961 were wholesale milk, $91,246,000, and cattle, $10,235,000.

The state's 12,000 farms in 1959 had an acreage of 2,945,000 (743,000 in harvested cropland). Livestock on farms on Jan. 1, 1962, included 445,000 cattle and 803,000 chickens.

VERMONT CROP STATISTICS

Crop (and unit of production)	Average 1951–60	1961	Est. 1962
Apples (1,000 bu.)	914	950	1,200
Hay (1,000 tons)	1,179	1,201	1,096
Maple sirup (1,000 gal.)	565	554	441
Potatoes (1,000 cwt.)	480	455	432

(Source: U.S. Department of Agriculture.)

Events, 1962.—Many Vermonters were shaken to learn on November 7 that Philip Hoff had become the first Democratic governor-elect in 109 years. Hoff defeated incumbent F. Ray Keyser, Jr., after a long, hard-hitting campaign. So close was the balloting (the original tally showed Hoff leading by only 1,282 votes) that Keyser requested a recount. Not until Jan. 16, 1963, when a joint legislative canvassing board reported to the legislature, was Hoff officially confirmed the winner. The final vote was 61,383 to 60,035, a difference of 1,348 votes. Some observers thought that more ballots had been cast "against" Keyser than for Hoff, and independent Republicans for Hoff were probably a critical factor in the outcome. In the contest for the United States senatorship, Republican George D. Aiken was reelected to the seat he held since 1940, winning two thirds of the vote in his race against W. Robert Johnson. Incumbent Republican U.S. Rep. Robert Stafford won easily over the Democratic congressional candidate, Harold Raynolds.

When the General Assembly adjourned in August 1961 without taking action on senatorial reapportionment or constitutional amendments, a

suit to enjoin the county clerks of Chittenden and Rutland counties from preparing ballots for senatorial elections was filed at once. After a hearing in March 1962, the Superior Court judge granted the injunction and suggested a formula which gave one new senator, of the two claimed, to Chittenden County. On appeal, the Supreme Court upheld the action in late July. Governor Keyser was forced to call a special session at once in order to make possible a primary election in September in the two counties. A compromise bill gave Chittenden County its one senator (see above, *Legislation, 1962*).

A legislative investigation of the State Highway Department gave headlines to committee members, but an outside management survey largely vindicated the department. The strike-bound Rutland Railroad remained inoperative (since Sept. 26, 1961), and neither side showed signs of retreat as rails rusted and equipment deteriorated. Meanwhile, the western half of the state depended on other transportation, and the company asked for permission from the Interstate Commerce Commission to abandon the line.

Ski operators had a bonanza spring, but summer resorts reported a discouraging season. Spectacular autumn foliage attracted large numbers of tourists. On July 20–29, at Button Bay on Lake Champlain, 10,000 Girl Scouts met for the 10 days of their national roundup.

In November, burning plastic and solvents from an overturned truck in Essex Junction destroyed power cables and cut off power from a large section of northern Vermont.

The death of former Senator and UN Ambassador Warren R. Austin on Christmas Day ended the distinguished career of an illustrious Vermonter.

"Legislation" and "Events" by:
ANDREW E. NUQUIST,
Professor and Chairman, Department of Political Science, The University of Vermont.

VETERANS ADMINISTRATION

The Veterans Administration (VA), an independent agency of the United States government since 1930, administers the benefits prescribed by law for veterans and their dependents.

The nation's living veterans totaled 22,267,000 as of Aug. 1, 1962. More than 15.1 million of these served in World War II, including 1 million who also served in the Korean conflict. There were 5.6 million Korean conflict veterans and 2.4 million World War I veterans. Veterans of other wars and the regular military establishment totaled 145,000.

Education and Training.—Under the Korean GI training program, a veteran may be entitled to 1½ days of training for each day spent in the service during the Korean conflict. The maximum training allowed any veteran is 36 months. Present law requires that all training under the program be completed by Jan. 31, 1965.

A veteran in full-time school or college training receives an allowance of $110 a month. If he has one dependent, he receives an additional $25 each month, and for more than one dependent his additional allowance is increased to $50. Those in training less than full time, and those in on-the-job or on-the-farm training receive smaller allowances.

Some 2.37 million Korean War veterans have trained under the Korean readjustment training program. An additional 7.8 million World War II veterans have trained under the World War II readjustment training program.

Vocational Rehabilitation Training.—Some 685,000 disabled veterans had received training to enable them to overcome their handicaps in the VA's vocational rehabilitation training program by September 1961.

While in training and for two months thereafter, a disabled trainee receives a subsistence allowance ranging from $65 to $120 a month, depending on the type of training and the number of the trainee's dependents. This payment is in addition to his monthly compensation payments for his service-connected disability.

Disabled Korean veterans discharged before Aug. 20, 1954, must finish training by Aug. 20, 1963, and those discharged after Aug. 20, 1954, must complete their training within nine years from the date of their separation from the service, or before Jan. 31, 1964, whichever date comes first. Hardship cases are allowed an additional four years in which to complete their rehabilitation training.

The U.S. Civil Service Commission gives a 5-point preference to veterans and a 10-point preference to disabled veterans applying for jobs in the federal civil service. The points are added to the passing score on examinations for civil service positions.

War Orphans Education.—Children of veterans who die from disease or injury incurred or aggravated in the line of duty in wartime service and certain extra-hazardous peacetime service are eligible to participate in the War Orphans Education Assistance program. More than 40,000 students had been trained under this program by 1962, and participation in it continued to increase. The majority of students are enrolled in institutions of higher learning, but, if approved by counselors, eligible participants may train in technical and business schools, as well as in vocational or trade schools. With a few exceptions they are between the ages of 18 and 23. They may receive up to 36 months of training while they draw a monthly allowance of $110 for instruction not available in public schools.

GI Loans.—The World War II and Korean GI bills both provided for loan programs to veterans. Up to 60% of the total of home loans veterans secure from private lenders is guaranteed, provided the guaranty does not exceed $7,500. Other real estate loans may be guaranteed up to 50% with a $4,000 maximum guaranty, and business loans are guaranteed up to 50% with a $2,000 guaranty ceiling. Direct loans are made by the VA in areas where ordinary lending facilities are not available. As of July 1, 1962, some 6.1 million veterans had received these loans, with a face value of more than $55 billion. More than one third of these loans had been repaid in full.

Eligibility of World War II and Korean veterans is calculated according to a formula which allows 10 years after the veteran's discharge from active duty, plus one year for each three months of active wartime service. The deadline for World War II veterans does not extend beyond July 25, 1967, and the deadline for Korean veterans is Jan. 31, 1975.

Insurance.—The Veterans Administration conducts the third largest ordinary life insurance business in the nation, despite the fact that the only new policies currently issued are Service Disabled Veterans Insurance to veterans with service-connected disabilities. At the close of fiscal year 1962, 5.4 million veterans held GI insurance policies with a face value of more than $40 billion. They paid more than $562 million in premiums and received more than $337 million in dividends. The dividends were essentially a return to the veterans of part of their premium payments. The return was due them because the

death rate of veterans is lower than was estimated by the mortality tables on which their premium payments are computed by law.

Medical and Hospital Care.—The VA Department of Medicine and Surgery has 131,294 employees, and operates 169 VA hospitals, 93 outpatient clinics, and 18 domiciliaries. During the fiscal year 1962, more than half a million patients were discharged from VA hospitals. The average daily patient load was 110,884 in VA hospitals, and an additional 3,000 were being treated at the VA's expense in private hospitals. VA outpatient clinics received more than 3.7 million visits during the fiscal year 1962.

Veterans of all wars are eligible to receive VA medical and hospital care under the following priority: (1) veterans suffering from service-connected disabilities or injuries that resulted from or were aggravated by wartime service; (2) veterans with compensable, service-connected disabilities, who need treatment for non-service-connected ailments (these must wait until a bed is available); and (3) veterans who have no compensable, service-connected disability. The last are required to state under oath that they are unable to pay for private hospitalization, and they, too, are required to wait until a bed is available at the hospital. Peacetime veterans with service-connected disabilities are also eligible for hospital or clinic care.

The VA spends $75 million annually in building replacement hospitals and modernizing permanent hospital facilities. A significant part of the nation's medical research program is conducted in VA hospitals. Because half the veteran patients are being treated for mental illness, emphasis on the medical research program is in this area. Because the nation's veterans are getting past middle age on the average, the entire field of gerontology is also receiving special attention. More than 7,000 research projects are currently under way in all the major fields of disease and injury.

Veterans with compensable service-connected disabilities may receive necessary prosthetic appliances from the VA. This service includes fitting and training in the use of artificial limbs and eyes, braces, trusses, orthopedic shoes, hearing aids, special clothing, crutches, canes, wheelchairs and eyeglasses. The blind receive a VA guide dog and mechanical and electronic equipment to help them overcome their handicap. Severely disabled veterans receive "wheelchair" housing grants and automobiles with special controls.

Guardianship.—The VA provides guardianship service for incompetent veterans, minor dependents, and incompetent dependents. As of July 1, 1962, the total value of their estates amounted to more than $750 million.

JOHN S. GLEASON, JR.,
Administrator of Veterans Affairs.

VETERANS ORGANIZATIONS. See specific names of organizations under SOCIETIES AND ORGANIZATIONS.

VETERINARY SCIENCE

An international conference on diseases of wildlife was held in June, 1962, at High View, N.Y., under the auspices of the American Institute of Biological Sciences. The nature and control of diseases caused by parasites, viruses, and fungus infections, as well as the effects of radiation, were leading topics.

Research.—A million-dollar radiological research center, said to be the largest of its kind in the world, was awarded to the College of Veterinary Medicine of Colorado State University by the U.S. Public Health Service. Intensive study is planned of ways to protect animals and humans from the effects of radiation.

A report of a disease among workers in an Iowa abattoir was of great interest because the microorganism, *Brucella suis*, believed to be the cause of the sickness, was isolated from the air in a room used for slaughtering swine. Apparently this was the first report of this particular infection being carried by air.

A simplified diagnostic test for anaplasmosis in cattle was developed at the University of Illinois College of Veterinary Medicine and Agricultural Experiment Station.

Progress was reported during the year in research on comparative cardiology. More is now known concerning circulatory disturbances of the dog than of any other species except man. Three physicians and a veterinarian at Stanford University performed surgery on the heart removed from each of four dogs, kept outside the body as long as two hours, and then replaced. The dogs were still alive five to nine months following surgery. This technique may point the way to surgery on the human heart to correct certain abnormalities.

Infectious hepatitis has been thought to be a disease limited to man. Recently it was reported that people have become ill after contacts with monkeys, chimpanzees, and gorillas sick with liver infections. The reverse also occurred. Dogs are known to suffer from liver infections, but no conclusive evidence at this time indicates canine infectious hepatitis is capable of infecting people.

Education.—A comprehensive plan of integrating the study of health programs was approved at Michigan State University to improve the quality of instruction given to students enrolled in veterinary medicine, medical technology, nursing, and the basic sciences related to medicine.

The Ontario Veterinary College at Guelph, Ontario, celebrated its 100th anniversary. It is the oldest active veterinary college in North America and has over 6,000 graduates.

Equine Practice.—The passing of the horse as a draft animal from the farms of the United States continued during 1962, but use of the horse increased at race tracks, in movies and television, and for family pleasure. Riding clubs flourished in both rural and urban areas and registrations increased. Because of the high individual value of these horses and sentimental attachments, owners are anxious to keep them healthy. Frequent calls for a veterinarian have revived the importance of equine practice.

JESSE SAMPSON,
Emeritus Professor of Veterinary Physiology and Pharmacology, University of Illinois.

VIETNAM

Forming the eastern part of the Indochinese Peninsula in Southeast Asia, Vietnam (area, 125,882 square miles; 1961 est. pop., 31 million) is divided approximately along the 17th parallel between the Western-aligned Republic of Vietnam (South Vietnam) and the Communist-controlled Democratic Republic of Vietnam (North Vietnam). South Vietnam's area of 66,000 square miles is slightly larger than that of Iowa; the population totals 14,647,000 (1962 est.). North Vietnam has a population of 16,400,000 (1960 est.). Principal cities in South Vietnam are Saigon, the capital (1962 est., 1,400,000); Tourane (110,500); and Hué (104,500). The capital of

WIDE WORLD

U.S. Army helicopters, together with American soldiers to operate and maintain them, have been an important form of military support given by the United States to the South Vietnamese in their fight against the Communist Vietcong guerrillas. (*Above*) An American acts as an observer of a ground action against guerrillas in the Mekong Delta area.

WIDE WORLD

(*Above*) A U.S. Army helicopter takes off after transporting three South Vietnamese soldiers to a strategic point near Hung My, in February. Several helicopters have been shot down in action. (*Below*) The last person to leave a crashed helicopter, an American, escapes safely before it is blown up to prevent capture by the enemy, in December.

WIDE WORLD

North Vietnam is Hanoi (1960 census pop., 642,576); the largest port is Haiphong (369,248). The official language is Vietnamese; minority languages include Chinese, Thai, and French.

South Vietnam

Government.—Although the constitution promulgated in October 1956 proclaims democratic ideals, individual liberty, and equal rights, legal opposition to the government is not permitted. The president of the republic is elected for 5 years by direct universal suffrage; Ngo Dinh Diem assumed the presidency on Oct. 26, 1956, and was elected to a second 5-year term on April 6, 1961. The National Assembly of 123 deputies was elected to a 3-year term by universal suffrage in 1959; elections scheduled for 1962 were postponed by the Assembly (see below, *Events, 1962*). A Constitutional Court passes on the legality of laws, decrees, and administrative directives. There are two political parties: the Party for the Change of Workers' Condition, led by Ngo Dinh Nhu, a brother of President Ngo Dinh Diem; and the Movement of the National Revolution, controlled by friends of the president.

Education and Religion.—Number of national Vietnamese schools (with enrollments, 1961): 4,286 primary (1,068,956); 82 secondary (74,437); 43 technical (5,723); 10 collegiate (11,708). Private schools (with enrollments): 2,084 primary (252,520); 322 secondary (120,000); 130 technical (4,716). French schools enrolled 13,110 students. Higher education is provided by universities in Saigon, Hué, and Dalat. Principal religions are Confucianism, Taoism, and Buddhism. There is an influential Roman Catholic minority of about 1.5 million persons who live chiefly in the south. Other religious sects are Cao Dai and Hoa Hao.

Finance.—The monetary unit is the piastre (VN$), which as of Jan. 1, 1962, was devalued from the official exchange rate of VN$35 to the U.S. dollar to a new rate for all trade transactions of VN$60 to the dollar. A supplementary budget of VN$1,615 million was added in late 1961 to the regular estimated budget of VN$14,985 million for the fiscal year 1961. Some 38.7% of total expenditure was for defense. United States military aid in 1961 totaled about VN$4,515 million.

Transportation.—Transport networks (miles, 1960): state-owned railways, 987; main roads, 2,175; secondary, 1,800 (asphalted). Air Vietnam provides local service, and several foreign airlines stop at Saigon. Passenger cars (1961 est.): 36,000.

Production.—Gross national product, 1960 est.: U.S.$2 billion. In 1961 an estimated 1.3 million of the 1.6 million farmers were landowners. Agriculture accounts for over 90% of total export value. Rubber (76,600 metric tons produced in 1960) earns over 60% of all foreign exchange. Rice is the chief food crop; output in the 1961–62 crop year was 4.7 million metric tons. Other crops are corn, copra, sugar, tobacco, manioc, peanuts, and hard fibers. Small-scale manufactures include cotton cloth, chemicals, matches, footwear, soap, and building materials. Small deposits of coal are mined. Electric power, 1960: 293 million kw.-hr.

Foreign Trade.—Total exports, 1961: VN$2,478 million (down 17% from 1960); imports, VN$8,928 million (up 5%). Chief exports, 1961: rubber, VN$1,534 million; rice, VN$514 million. Chief imports are foods, petroleum products, minerals, textiles, metal manufactures, and drugs. South Vietnam's principal customers are France and Great Britain; chief suppliers are the United States, France, and Britain.

Events, 1962.—The deadlocked war in South Vietnam continued between the South Vietnamese Army, which numbered 205,000 regular troops at the end of 1962, and the Communist-led Vietcong rebels, who comprised an estimated 20,000 guerrillas. In an attempt to isolate the rebels and protect the rural population, President Ngo Dinh Diem's government put into operation the so-called Delta Plan, under which thousands of peasants were relocated in about 2,000 fortified "strategic hamlets" in the Mekong River delta. The army conducted successful large-scale operations against the Vietcong in the Plain of Reeds, situated about 60 miles west of Saigon, and won many minor engagements in other areas. In the first nine months of the year an estimated 12,000 Vietcong rebels were killed by government forces, which in the same period reported losses of about 3,000 troops. Rebel resistance reportedly had been contained by the end of 1962.

The government's military operations were supported by the U.S. Military Assistance Command, Vietnam, which was established in Saigon in February, under the command of Gen. Paul D.

Harkins. There were in South Vietnam in early 1962 an estimated 4,000 United States military advisers who trained regular and irregular troops, and actively supported Vietnamese forces engaged in combat missions. United States servicemen exchanged fire with Vietcong rebels while serving in combat as troop advisers or as airplane pilots and observers. U.S. Army helicopters carrying Vietnamese troops and piloted by Americans were shot down on several occasions. Casualties suffered by United States officers and enlisted men totaled 34 killed and 85 wounded from December 1961 to November 1962.

The United States, which since 1954 has contributed more than $2 billion in aid to South Vietnam, accelerated both its military and economic assistance to President Ngo Dinh Diem's government. Economic aid distributed by the U.S. Operations Mission in South Vietnam was valued at about $200 million in 1962. United States officials declared their firm support for the Vietnamese government. U.S. Attorney General Robert F. Kennedy, during a brief stopover at Saigon airport on February 18, said that United States forces would remain in the country until the Communist-led rebels were defeated.

South Vietnam and the United States jointly announced on January 4 an 11-point economic and social program to increase the country's living standards, develop agriculture and industry, and expand education and public health facilities. The government on January 8 inaugurated a consultative 55-member National Economic Council, but the National Assembly later modified the constitution in order to postpone scheduled elections until 1963. The latter action tended to increase apparent popular dissatisfaction with the government, which has been accused of being authoritarian and repressive.

President Ngo Dinh Diem escaped an assassination attempt by two rebellious fighter pilots who strafed and bombed the presidential palace in Saigon on February 27.

South Vietnam's troubled relations with neighboring Cambodia, Laos, and North Vietnam deteriorated further during the year. The government on April 23 charged that Cambodian troops had attacked a village inside the Vietnamese border and had killed 52 persons. South Vietnam in late July filed a protest with the three-nation International Control Commission against the alleged infiltration from Laos of North Vietnamese guerrillas, who reportedly carried arms and ammunition that had been manufactured in Communist China.

North Vietnam

Government.—The Communist-type Democratic Republic of Vietnam is ruled by the leaders of the Lao Dong (Worker's Party). The constitution of 1960 provides for a National Assembly of 450 members elected for 4 years by universal suffrage. The Assembly elects a Standing Committee to exercise legislative powers when it is not in session. In 1960, Ho Chi Minh was re-elected president to a 4-year term, and Pham Van Dong was renamed premier and foreign minister.

Education.—The Communist regime claims that illiteracy is practically nonexistent. School enrollment, 1960–61 school year: primary, 2,386,000; technical, 35,500; and higher, 17,900. An additional 3,000 students reportedly attended universities in other Communist countries.

Transportation.—Internal transport is chiefly by means of the Red River and its tributaries. Railways at the end of 1960 aggregated 485 miles of track, mostly radiating from Hanoi. War-damaged roads have been largely rebuilt with Communist Chinese aid. The state airline provides internal service; the Chinese airline connects Hanoi with China.

Economy.—About 40% of all peasant families were organized in state cooperatives in 1961. Rice is the chief crop; output of paddy was 4.5 million metric tons in 1960. Secondary crops are sugarcane (441,800 metric tons in 1960), maize, tea, and cotton. The principal mineral is coal, production of which totaled 2.6 million metric tons

UPI

In an effort both to isolate guerrillas of the Communist Vietcong and to prevent further inroads in sparsely populated rural areas, the South Vietnamese government began a program of relocating villagers to fortified strategic hamlets. (*Above*) Peasants carrying their belongings are escorted to their new home by government troops in August.

UPI

(*Above*) South Vietnamese soldiers, searching for Vietcong Communists in the Darlac Plateau in November, cross a creek under a bridge that was dynamited by the guerrillas. (*Below*) Aerial view of a well-guarded village near Kontum, South Vietnam, in which anti-Communist mountain tribesmen were resettled for protection against Vietcong guerrillas.

WIDE WORLD

in 1960. Other minerals include phosphates, salt, tin, and chromite. Recent industrialization, mainly in the Hanoi area, has resulted in the expansion of the metallurgical, chemical, textile, rubber, building materials, and artificial fertilizer industries, and industrial production is planned to be more than doubled under the first 5-year plan (1961–66). Electric power output was 254 million kw.-hr. in 1960. North Vietnam's trade is predominantly with Communist China and other Communist countries.

Events, 1962.—North Vietnam was guilty of "subversion and aggression" in South Vietnam, according to a report of the International Control Commission issued in May. The Communist regime denied the charges and again claimed that a people's "war of liberation," not subversion, was occurring in South Vietnam. The North Vietnamese government admitted publicly for the first time that it actively supported the Vietcong rebels, for on January 18 it announced the formation of the Vietnam People's Revolutionary Party for the purpose of overthrowing the government of South Vietnam. The Communist regime on June 23 ordered an intensified struggle by the Vietnamese people to destroy strategic hamlets in South Vietnam.

In an effort to counter United States large-scale aid to South Vietnam, North Vietnam reportedly received increased military assistance from Communist China. It was reported early in the year that about 3,500 Chinese soldiers were acting as advisers to the North Vietnamese Army, and that many of the estimated 16,000 North Vietnamese guerrillas operating in South Vietnam had been trained by Chinese soldiers.

In September there were reports that North Vietnam had begun to build a bamboo wall along its 38-mile border with South Vietnam, apparently to keep refugees from escaping and to prevent infiltration by South Vietnamese agents.

West Virginia University.

VIRGIN ISLANDS, British. See BRITISH VIRGIN ISLANDS.

VIRGIN ISLANDS OF THE UNITED STATES

Constituting an organized but unincorporated insular territory of the United States, the Virgin Islands of the United States are located approximately 1,400 miles southeast of New York, N.Y., and 40 miles east of Puerto Rico. They form part of the island chain extending between the Caribbean Sea and the Atlantic Ocean. Purchased from Denmark for $25 million in 1916 and formally transferred to the United States on March 31 of the following year, the islands are under the jurisdiction of the U.S. Department of the Interior.

Area and Population.—Having an area of 133 square miles, the Virgin Islands territory comprises three main islands (St. Thomas, 32 square miles; St. Croix, 82; and St. John, 19) and approximately 50 small islets and cays (most uninhabited), included statistically with the larger islands. According to the 1960 census, the population is 32,099 (St. Croix, 14,973; St. Thomas, 16,201; and St. John, 925). The chief cities are Charlotte Amalie, the capital (12,880), on St. Thomas, and Christiansted (5,137) and Frederiksted (2,177), on St. Croix.

Government.—The basic law of the Virgin Islands is known as the Organic Act. Since its revision on July 22, 1954, legislative power has been vested in a unicameral Legislature composed of 11 members elected for two-year terms, five representing the three legislative districts into which the islands are divided and six being members at large. Sessions are 60 consecutive calendar days in duration, and special sessions totaling not more than 30 days annually may be called by the governor.

During its regular 1962 session the Legislature considered 111 proposals, of which 90 bills, including 8 resolutions, were enacted or adopted. Of those enacted, 77 received executive approval. (See also below, *Events, 1962.*)

Executive powers are vested in the governor of the Virgin Islands, who is appointed by the president of the United States, subject to confirmation by the U.S. Senate. Principal territorial officials in 1962 were: Ralph M. Paiewonsky, governor (April 5, 1961); Cyril E. King, government secretary (May 4, 1961); Walter I. M. Hodge, president of the Legislature; Walter A. Gordon, judge of the U.S. District Court; and Almeric Christian, United States attorney. There are 10 executive departments, each administered by a commissioner, and a department of law headed by an attorney general. All are appointed by the governor with the advice and consent of the Legislature.

Judicial functions are carried out by the District Court of the Virgin Islands, the court of record, and by the Municipal Court of St. Thomas–St. John and the Municipal Court of St. Croix. The district court judge is appointed by the president of the United States, and the municipal court judges are appointed by the governor with the advice and consent of the Legislature for terms of eight years.

Finance and Banking.—Total revenue for the fiscal year ending June 30, 1962, from real property taxes, income taxes, miscellaneous revenues, matching funds, grant-in-aid funds, and miscellaneous federal contributions amounted to $20,748,311.62. Major expenditures by departments were: Health, $3,777,710.41; Education, $2,790,820.43; Public Works, $2,391,652; and Welfare, $1,260,811.

The islands are served by the Virgin Islands National Bank and by four branches of the Chase Manhattan Bank. A branch of the First Federal Savings and Loan Bank of Puerto Rico, specializing in long-term mortgages, was established in 1962.

Education.—School attendance is compulsory between the ages of 5½ and 16, inclusive. In 1962 the three major islands had 29 public schools, consisting of 6 kindergartens, 11 rural schools, 9 city elementary schools, 1 junior high school, and 2 junior-senior high schools. Public school enrollment totaled 7,624 at a per capita cost of $339.02 (exclusive of adult education, school lunch, and community services costs). There were also 9 parochial and 2 private schools enrolling 3,115. Public funds available for education in the 1961–62 fiscal year totaled $3,064,008.

Industry, Tourism, and Trade.—The most important industries of the Virgin Islands are agriculture and the production of rum and spirituous liquors, and the chief business activity is tourism.

There are approximately 376 farms in the islands which cover 36,533 acres and which had 28,637 acres in crops that were harvested during the fiscal year 1960. The growing of sugarcane, the processing of raw sugar, and the breeding of livestock are the main supports of the economy of St. Croix.

On St. Thomas, tourism has supplanted rum production as the principal source of revenue. During the year ending June 30, 1962, total income from tourists in the islands was estimated at $35,100,000. An estimated 234,389 tourists visited the Virgin Islands during the fiscal year 1962.

In the 1961 calendar year the total value of merchandise exports from the Virgin Islands was $9,133,124, of which $8,317,418 went to the United States. Imports totaled $50,208,444, of which $38,725,786 was from the United States.

Transportation and Communications.—Daily air service is provided between the Virgin Islands and Puerto Rico, and between St. Thomas and St. Croix. Daily mail and passenger service by boat is furnished between St. Thomas and St. John. In 1961–62, 131 large cruise ships made St. Thomas a port of call.

St. Croix has 180 miles of highways serving the island's 3,354 motor vehicles; on St. Thomas and St. John, 106 miles of roads serve 4,015 motor vehicles.

Communications media and facilities include three daily and two triweekly newspapers. There are two cable offices on St. Thomas, and one on St. Croix, one radio station on each of these islands, two television stations on St. Thomas, and approximately 4,000 telephones. Work is nearing completion on a dial telephone system.

Events, 1962.—Tourism continues to be the economic backbone of the Virgin Islands. The newly created Department of Commerce expanded its activities to promote tourism and trade. Considerable progress was made in planning for diversification of industries when an act ratifying an agreement making facilities available for the establishment of a large alumina processing plant on St. Croix was passed by the Legislature.

Housing construction, the islands' most important problem, was speeded up. An act creating the Department of Housing and Community Renewal was passed in 1962, as well as a homestead exemption act and a zoning and subdivisions law.

The Legislature also passed an act to establish the College of the Virgin Islands, and plans have been made to open the college in July, 1963.

A jet airport and a deep-water pier were completed on St. Croix, and direct commercial jet

service between the United States and St. Croix was initiated from Miami on June 10 and from New York on Dec. 21, 1962. Extension of the airport in St. Thomas was completed to accommodate turboprop planes.

The U.S. National Park Service expanded and improved its facilities on St. John, and established the Buck Island Underseas Park. The Legislature authorized transfer to the National Park Service of Buck Island, off St. Croix, for administration as a national monument.

RALPH M. PAIEWONSKY,
Governor of the Virgin Islands.

VIRGINIA

A South Atlantic state of the United States, Virginia ranks 36th among the states in area (land, 39,838 square miles; inland water, 977) and 14th in population (4,177,000 on July 1, 1962, a 5.3% increase from the 1960 census figure of 3,966,949). As of Jan. 1, 1963, the state was divided politically into 96 counties and 34 independent cities. Urban places with populations above 15,000 in 1960:

Alexandria	91,023	Norfolk	305,872
Arlington County[1]	163,401	Petersburg	36,750
Bristol	17,144	Portsmouth	114,773
Charlottesville	29,427	Richmond (*capital*)	219,958
Danville	46,577	Roanoke	97,110
Hampton	89,258	Salem	16,058
Hopewell	17,895	South Norfolk	22,035
Lynchburg	54,790	Staunton	22,232
Martinsville	18,798	Waynesboro	15,694
Newport News	113,662	Winchester	15,110

[1] Both a county and an urban township.

Government.—Chief executive and judicial officers in 1962 included Albertis S. Harrison, Jr. (Democrat), governor, serving a four-year term; Mills E. Godwin, Jr., lieutenant governor; Martha Bell Conway, secretary of state; Lewis H. Vaden, treasurer; J. Gordon Bennett, auditor; Robert Y. Button, attorney general; Woodrow W. Wilkerson, superintendent of public instruction; and John W. Eggleston, chief justice of the 7-member Supreme Court of Appeals.

The Virginia General Assembly, which convenes in even-numbered years, comprised 38 Democrats and 2 Republicans in the Senate in 1962 and 94 Democrats, 5 Republicans, and 1 Independent in the House of Delegates.

Legislation, 1962.—The General Assembly approved a biennial budget (general fund) amounting to $573,500,000, 15% more than the budget adopted in 1960. Concern over the increased budget led to the creation of a 15-member State Tax Study Commission. Pending completion of the study of state and local revenues and expenditures, the Assembly agreed to defer proposed changes in the tax structure. The temporary taxes of 1960 on cigarettes, tobacco, and alcoholic beverages were continued. In addition, a withholding tax plan was adopted, to go into effect in 1963. It was estimated that the withholding plan would bring in more than $6 million in the biennium through more efficient collection, in addition to a one-time windfall of more than $20 million. Sales tax proposals, which had badly split the Assembly in 1960, were voted down by large majorities.

Reapportionment of the membership of the House and Senate brought a suit to require further redistricting (see below, *Events, 1962*). The Assembly provided for a two-year moratorium on local annexations, awaiting a comprehensive study of urban-rural problems by the Virginia Advisory Legislative Council. Certain pending cases, such as the Richmond annexation suits against Henrico and Chesterfield counties, were exempted from the moratorium.

Appropriations for public schools were increased significantly and a new formula was worked out for distributing state funds. The salary range for public school teachers was increased to $3,400–$4,900, compared with the existing scale of $3,000–$4,200. The Assembly also provided substantial increases for operating expenses of the several public institutions of higher learning, including about $4 million in the next biennium for faculty salary increases. Norfolk College and Richmond Professional Institute were separated from their parent body, William and Mary College; the three will now exist as independent institutions.

The Assembly transferred responsibility for industrial development from the Department of Conservation and Economic Development to the governor's office. After considerable debate and a variety of suggestions, the Assembly adopted a daylight saving time (DST) bill. From Memorial Day to Labor Day the whole state, with the exception of Bristol, will be on DST.

A measure was passed permitting statewide bank mergers by repealing the 25-mile radius limitation in the existing law. Also passed was the "implied consent" law, under which a driver is presumed to have consented to taking a blood test if charged with drunken driving. A bill was passed to implement the Kerr-Mills hospitalization program for the aged with an appropriation of $250,000 to begin the program in the second year of the biennium.

Finance.—In the 1961 fiscal year, revenue of $685,959,596 included $370,239,891 from state taxes and $108,100,932 in federal funds. Chief tax yields were from individual incomes ($81,340,014), motor fuels ($90,384,444), and licensing ($51,918,163). Spending of $636,026,613 included $195,455,940 for education, $86,555,724 for health, welfare, and safety, and $150,985,621 for highways.

Education.—In the fall of 1962, public elementary schools staffed by 20,501 teachers enrolled 611,208; secondary schools with 14,925 teachers enrolled 294,532; and (fall 1961) parochial schools with 1,030 teachers enrolled 35,577. College enrollment totaled 61,908.

In the 1961–62 school year, operating expenditures for public schools totaled $241,141,494 ($290.42 per pupil) and outlays for construction and improvement amounted to $59,435,694. Revenue was drawn chiefly from state funds ($104,125,513) and local districts ($117,576,092). Teachers' salaries averaged $4,640 (high school, $4,778; elementary, $4,512). Operating expenditures for higher education totaled $28,443,726 and outlays for construction and improvements amounted to $13,218,217.

Public Assistance.—In the 1961 fiscal year, public assistance payments to a monthly average of 70,619 persons totaled $26,607,531. This amount included $11,092,461 for dependent children and $8,815,718 for the aged.

Transportation and Communications.—With 380 miles of highway construction and reconstruction completed during the 1961 fiscal year, *highways and roads* on June 30, 1961, totaled 56,581 miles (54,841 surfaced). These served 1,512,654 *motor vehicles* (as registered on Sept. 30, 1961), including 1,147,135 automobiles. Operating in the state in 1961 were 26 *railroads* (using 2,789 line miles of track); 5 regularly scheduled *airlines;* and 66 commercial and municipal *airports and airfields.*

Communications media included (1961) 100 AM and 26 FM *radio stations;* 11 VHF *television stations;* 32 daily *newspapers* (circulation, 885,313) and 105 other newspapers (310,723); and (Jan. 1, 1962) 395,100 business and 1,000,800 residential *telephones.*

Labor Force.—The state's labor force in July 1962 included 147,350 agricultural workers. Nonagricultural employees numbered 1,062,300, compared with 1,027,700 for the previous July and an average of 1,030,000 for the full year 1961. Of nonfarm employees, 27.1% were in manufacturing, 20.4% in trade, and 18.7% in government services. Unemployment in July 1962 stood at 50,950, compared with 66,100 a year earlier.

Manufacturing.—Manufacturing engaged an average of 275,100 workers in 1961, including 226,500 in production, and provided a payroll of $1,192,197,000. Value added by manufacture totaled $2,540,388,000.

LEADING VIRGINIA MANUFACTURES, 1961[1]

Industry group	Average no. of employees	Salaries and wages (in thousands)	Value added by mfr.[2] (in thousands)
Chemicals and products	33,000	$194,303	$516,845
Food and kindred products	32,100	123,332	302,014
Tobacco manufactures	13,300	58,131	292,147
Textile mill products	35,200	122,235	223,258
Transportation equipment	23,100	146,184	217,820
Paper and allied products	11,300	61,950	139,549
Furniture and fixtures	16,700	62,389	114,238
Lumber and wood products (except furniture)	22,800	60,730	104,202
Electrical machinery	9,800	53,954	100,226
Apparel and related products	24,000	64,230	96,855

[1] Preliminary estimates. [2] Value of product less cost of materials, supplies, fuel, electric energy, and contract work. (Source: Virginia Department of Labor and Industry.)

Mining.—In 1961, Virginia ranked 19th among the states in the value of its mineral output, with 1.22% of the national total. Increases in production of coal, lead, and zinc brought the total up 9% over 1960. Fuels provided 57% of the total value; nonmetals, 39%; and metals, 4%. Virginia was the sole producer of aplite, first in output of kyanite, and third in pyrites and titanium.

WIDE WORLD

Albertis S. Harrison, Jr. (left), is sworn in as governor of Virginia by Chief Justice John Eggleston, January 13.

VIRGINIA MINERAL PRODUCTION, 1961
(In short tons, except as noted)

Mineral	Quantity	Value
Clays	1,406,000	$ 1,332,000
Coal	30,332,000	126,121,000
Coke	307,833	4,777,000[1]
Lead (recoverable content of ore)	3,733	769,000
Lime	739,000	8,596,000
Natural gas (1,000 cu. ft.)	2,466,000	668,000
Sand and gravel	9,839,000	14,697,000
Stone	22,934,000	39,206,000
Zinc (recoverable content of ore)	29,163	6,726,000
Other minerals	...	28,414,000
Total	...	$221,835,000[2]

[1] Value of processed minerals not included in total. [2] Total adjusted to eliminate duplication in the value of clays and stone. (Source: U.S. Bureau of Mines.)

Agriculture.—Cash farm income for the first nine months of 1962 (excluding government payments) totaled $273,660,000, compared with $266,926,000 for the corresponding period of 1961. For the full year 1961, income comprised $250,929,000 from livestock, $229,880,000 from crops, and $12,699,000 in government payments. Principal income sources in 1961 were tobacco, $92,396,000; wholesale milk, $79,138,000; cattle, $66,051,000; and eggs, $34,480,000.

The state's 98,000 farms in 1959 had an acreage of 13,126,000 (2,858,000 in harvested cropland). Livestock on farms on Jan. 1, 1962, included 1,422,000 cattle, 628,000 hogs, 284,000 sheep, and 6,755,000 chickens, and (1961) 52,331,000 commercial broilers. An average of 149,000 family and 54,000 hired workers engaged in farming in 1961.

VIRGINIA CROP STATISTICS

Crop (and unit of production)	Average 1951–60	1961	Est. 1962
Apples (1,000 bu.)	9,505	10,500	9,800
Corn for grain (1,000 bu.)	28,650	28,885	32,040
Peaches (1,000 bu.)	1,470	1,500	1,500
Peanuts (1,000 lb.)	213,031	192,400	239,200
Potatoes (1,000 cwt.)	3,622	4,784	3,732
Soybeans (1,000 bu.)	4,467	7,749	7,974
Sweet potatoes (1,000 cwt.)	1,545	1,730	2,667
Tobacco (1,000 lb.)	156,219	147,686	172,506
Wheat (1,000 bu.)	6,852	7,122	4,117

Events, 1962.—Albertis S. Harrison, Jr., was inaugurated governor on January 13, succeeding J. Lindsay Almond, Jr. The quarrel in U.S. Sen. Harry Byrd's Democratic organization which developed in 1959 over the abandonment of massive resistance to school desegregation, and which reached a climax in the Democratic primaries of 1961, was not a major political factor in 1962. In contrast to 1960, the session of the General Assembly was generally harmonious (see above, *Legislation, 1962*).

The most important political development of the year dealt with reapportionment. The Assembly reallocated two state Senate seats and three House seats, but suit was brought in the spring, on the basis of the U.S. Supreme Court's *Baker* v. *Carr* decision, calling for more representation for urban areas. In the fall a special federal court, in a 2–1 divided opinion, found the current apportionment of seats unconstitutional. There was some speculation that the Assembly might be called to enact a new redistricting bill, but Governor Harrison appealed the decision to the U.S. Supreme Court, and a stay of the lower court's order was granted. Arguments were not to be heard until 1963. The matter was of special importance at this time because in 1963 all 40 Senate seats and the 100 House seats will be up for election.

Public school desegregation, in its fourth year, advanced slowly with token integration prevailing in the desegregated areas. Desegregation came to 11 new school districts, raising the total to 31, while 103 districts remained without any desegregation. The number of desegregated schools rose from 75 to 140, and the number of Negroes in such schools increased from 536 to 1,230. However, 99.4% of all Negro public school children continued to attend segregated schools. As in the past, no serious incidents occurred in connection with school desegregation. At the college and university level, fewer full-time Negro students (45 to 50) enrolled in desegregated institutions than in 1961 (56).

Threatened school desegregation in Powhatan County aroused considerable interest during the summer. County authorities indicated that they would close schools rather than desegregate. A desegregation suit in behalf of 65 Negro children was filed on August 17, but no Powhatan schools were desegregated in September and the suit was pending.

Public schools remained closed for the fourth consecutive year in Prince Edward County. When the school year began, some 1,300 white children enrolled in the private schools operated by the Prince Edward School Foundation. As in 1961–62, the county was prohibited by Federal District Judge Oren R. Lewis from issuing tuition grants so long as public schools remained closed. Except for 130 or more Negro students who attended schools outside the county, there were no schools for Negroes.

Litigation in the Prince Edward case proceeded in both federal and state courts during the year, but without conclusive results. On March 5, the state Supreme Court of Appeals ruled that Virginia's constitution did not require the county to operate public schools. The case then returned to federal court. On July 26, Judge Lewis issued an opinion stating that the public schools of the county could not be closed to avoid desegregation while schools elsewhere in Virginia remained open, and he ordered the school board to prepare a plan for admitting pupils to the public schools. On October 26 he postponed issuing an order requiring compliance with this decision in order to allow time for an appeal. The decision was appealed to the U.S. Fourth Circuit Court and arguments were set for Jan. 9, 1963.

UPI

WAGES AND HOURS

Average weekly hours for production workers in manufacturing industries in the United States varied from an average 40.6 hours per week in November 1961 to 39.7 hours per week in January 1962, and remained fairly stable during 1962. The average in November 1962 was 40.4 hours per week. Gross average weekly earnings for production workers reached an all-time high of $97.36 in November 1962, compared with $95.82 in November 1961.

As shown in Table 1, average gross weekly earnings increased in 38 classifications and decreased in 8 classifications. The decrease in average earnings was generally accompanied by a decrease in the average hourly workweek. Increases varied from 4 cents per week in the leather and leather products industry to $9.23 per week in the transport equipment industry. Losses in average weekly earnings varied from 19 cents in the apparel industry to $15.78 among workers employed in the dealing and exchange of securities.

Table 1—AVERAGE WEEKLY HOURS AND GROSS EARNINGS OF PRODUCTION WORKERS, BY INDUSTRY[1]

Industry group and industry	Average weekly hours in October 1962[2]	Average weekly hours in October 1961	Average weekly earnings in October 1962[2]	Average weekly earnings in October 1961

[1] For mining, manufacturing, laundries, cleaning and dyeing plants data refer to production and related workers; and for the remaining industries to nonsupervisory workers. [2] Preliminary. [3] Data relate to nonsupervisory employees, except messengers. [4] Except eating and drinking places. [5] Money payments only; additional value of board, room, uniforms, and tips not included. (Source: U.S. Department of Labor, Bureau of Labor Statistics.)

Hourly earnings for production workers in manufacturing (excluding premium overtime) averaged $2.32 in October 1962, an increase of 6 cents per hour from October 1961. In October 1962, gross average hourly earnings reached a high of $2.40, with the rate in durable goods averaging $2.57 per hour and in nondurable goods averaging $2.19 per hour.

Table 2—AVERAGE GROSS HOURLY EARNINGS IN MANUFACTURING[1]

Industry	Average hourly earnings in month of October			
	1962	1961	1960	1959
All manufacturing	$2.40	$2.35	$2.27	$2.18
Durable goods	2.57	2.51	2.43	2.34
Ordnance and accessories	2.84	2.81	2.70	2.60
Lumber and wood products (except furniture)	1.99	2.01	1.92	1.92
Furniture and fixtures	1.96	1.93	1.89	1.84
Stone, clay, and glass products	2.43	2.37	2.31	2.24
Primary metal industries	2.96	2.97	2.78	2.62
Fabricated metal products	2.57	2.51	2.45	2.34
Machinery	2.72	2.64	2.56	2.50
Electrical equipment and supplies	2.42	2.36	2.29	2.22
Transportation equipment	2.97	2.83	2.79	2.68
Instruments and related products	2.45	2.39	2.34	2.34
Miscellaneous manufacturing industries	1.97	1.92	1.89	1.90
Nondurable goods	2.18	2.14	2.06	1.99
Food and kindred products	2.24	2.18	2.10	2.02
Tobacco manufactures	1.72	1.73	1.58	1.55
Textile-mill products	1.69	1.65	1.61	1.58
Apparel and related products	1.67	1.69	1.62	1.61
Paper and allied products	2.43	2.37	2.28	2.21
Printing, publishing, and allied industries	2.82	2.77	2.69	2.62
Chemicals and allied products	2.68	2.62	2.53	2.44
Petroleum refining and related industries	3.05	3.04	2.87	2.86
Rubber and miscellaneous plastic products	2.47	2.41	2.35	2.29
Leather and leather products	1.73	1.70	1.65	1.60

[1] For coverage, see footnote 1 to Table 1.

Weekly gross earnings for production workers ranged from $59.95 in the apparel and related products industry to $126.88 in petroleum refining and related industries. Including the nonmanufacturing industries, the highest earnings in October 1962 were recorded in the special trades of the contract construction industry, averaging $133.16 for an average 42.4 hour workweek. The lowest average earnings for industries recorded in Table 1 for October 1962 were $46.83 per week in the hotel and motel industry, with the workweek averaging 38.7 hours.

WAKE ISLAND. See PACIFIC ISLANDS.

WALES

Forming a peninsula in western Great Britain, Wales comprises 13 counties (including Monmouthshire) with a total area of 8,017 square miles, and a population (1961 provisional census) of 2,640,632. Chief county boroughs and populations (1961 provisional census): Cardiff, 256,270; Swansea, 166,740; Newport, 108,107; Rhondda, 100,314; and Merthyr Tydfil, 59,008. About 26% of the population speak Welsh.

Wales returns 36 members to the House of Commons, and the British government includes a minister of state for Welsh affairs (Lord Brecon, appointed in 1957). The Council for Wales and Monmouthshire advises the national government on matters affecting the area, including the increasing unemployment and depopulation of the rural areas. The four constituent colleges of the University of Wales had 6,975 students in 1961–62.

Wales produces approximately 90% of Britain's sheet steel and 30% of its crude steel, provides virtually all of its tinplate, accounts for 40% of its coal exports, and supplies about 40% of its aluminum. Agriculture employs about 80,000 persons

The first Atlantic College was opened near Cardiff on Oct. 3, 1962. The college enrolled 56 boys, aged 16 to 19, from 10 countries. The international school is the first of a group of pre-university schools that are planned to provide a cooperative environment for various nationalities.

WALLIS AND FATUNA ISLANDS

Situated west of Samoa and northeast of Fiji in the South Pacific, this French overseas territory comprises two archipelagoes: Fatuna or Hoorn (area, 44 square miles; 1961 est. pop., 7,000), and Wallis (area, 61 square miles; est. pop., 2,900). Matu-Utu, on Uvea (area, 24 square miles), is the capital. The population is mainly Polynesian.

This overseas territory, which was established on July 29, 1961, is administered by a French-appointed high commissioner (Jean Perie). He is assisted by a 6-member Territorial Council (which includes the three kings of the islands) and a 20-member Territorial Assembly. The economy of the islands is primarily one of subsistence agriculture, supplemented by fishing. The principal food crops are taro, arrowroot, cassava, yams, and bananas. The chief cash crop is copra (731 metric tons in 1960).

WALNUTS. See NUTS.

WALTER, Bruno

German–U.S. conductor: b. Berlin, Germany, Sept. 15, 1876; d. Beverly Hills, Calif., Feb. 17, 1962.

Bruno Walter (originally, Bruno Walter Schlesinger) was one of the great orchestra conductors of his time. Intellectual without being pedantic, individual without being eccentric, he was at home with almost every composer in the symphonic repertoire, and his operatic interpretations were superlative. Walter's knowledge and sure command of his art, along with his quiet, nonauthoritative manner, made him a favorite with musicians and audiences alike.

He began to study piano in early childhood, and by the age of eight had won a scholarship to the Singakademie in Berlin. He later attended the Stern Conservatory, also in Berlin. In 1893 he went to Cologne as opera coach, and in the following year he had his debut as conductor there. Shortly afterward he became opera coach at the Hamburg Stadttheater, where he came under the influence of the composer Gustav Mahler, then the conductor at Hamburg. This association, later continued in Vienna, had a profound effect on Walter, and he was destined to become Mahler's greatest interpreter.

His reputation by now established, Walter served as second conductor of the Breslau opera (1896–97), and first conductor of the operas at Pressburg (1897–98), Riga (1898–1900), and Berlin (1900–01). He was named second conductor, under Mahler, of the Imperial Opera in Vienna in 1901, and, following Mahler's death in 1911, first conductor. During the 1913–14 season he went to Munich, where he remained until 1922. He later was chief conductor of the Berlin opera (1925–29) and the Leipzig Gewandhaus Orchestra (1930–33). Meanwhile, he was frequently a guest conductor throughout Europe and in the United States, having first appeared in the latter in 1923.

Walter, who was a Jew, was forced to leave Germany in 1933. From 1936, following a series of highly successful guest appearances, until 1938, when Germany annexed Austria, he was artistic adviser and chief conductor of the Vienna State Opera.

In 1939, after a year in France, Walter took up residence in the United States, of which he subsequently became a citizen. His principal American conducting engagements were with the NBC Symphony, the New York Philharmonic, and the Metropolitan Opera. He was the author of three books, *Gustav Mahler* (1937; Eng. tr. 1941); *Theme and Variations* (1946); and *Of Music and Music-Making* (1957; Eng tr. 1961).

WASHINGTON. City, District of Columbia. See DISTRICT OF COLUMBIA.

WASHINGTON

A Northwestern state of the United States, Washington ranks 20th among the states in area (land, 66,709 square miles; inland water, 1,483) and 23d in population (3,006,000 on July 1, 1962, a 5.4% increase from the 1960 census figure of 2,853,214). Urban places with populations above 15,000 in 1960:

Aberdeen	18,741	Seattle	557,087
Bellingham	34,688	Spokane	181,608
Bremerton	28,922	Tacoma	147,979
Everett	40,304	Vancouver	32,464
Longview	23,349	Walla Walla	24,536
Olympia (*capital*)	18,273	Wenatchee	16,726
Renton	18,453	Yakima	43,284
Richland	23,548		

Government.—Chief executive and judicial officers in 1962 included Albert D. Rosellini (Democrat), governor, serving a four-year term; John A. Cherberg, lieutenant governor; Victor A. Meyers, secretary of state; Tom Martin, treasurer; Cliff Yelle, auditor; John J. O'Connell, attorney general; Louis Bruno, superintendent of public instruction; and Robert C. Finley, chief justice of the 9-member Supreme Court.

The Washington Legislature, which convenes in odd-numbered years, comprised 26 Democrats and 13 Republicans in the Senate in 1962 and 59 Democrats and 40 Republicans in the House of Representatives.

Finance.—In the 1962 fiscal year, revenue of $895,490,876 included $515,701,303 from state taxes and $125,392,299 in federal funds. Chief tax yields were the 4% general sales tax ($199,449,503), motor fuel taxes ($74,981,394), and licensing ($37,014,980). Spending of $834,703,231 included $289,398,701 for education, $174,720,941 for health, welfare, and safety, and $103,847,776 for highways.

Education.—In the fall of 1962, public elementary schools staffed by 14,815 teachers enrolled 399,887 pupils; secondary schools with 11,553 teachers enrolled 284,959; and (fall 1961) parochial schools with 1,473 teachers enrolled 47,756. College enrollment (fall 1961) totaled 70,743.

Estimated public school spending in the 1961–62 school year totaled $354.25 million, including current expenditures of $275.5 million ($450 per pupil) and capital outlays of $63 million. Revenue of $370.3 million was drawn chiefly from state funds ($206.5 million) and local districts ($112 million). Teachers' salaries averaged $5,915 (high school, $6,095; elementary, $5,750). Actual spending for higher education (1961 fiscal year) totaled $91,149,000.

Public Assistance.—In the 1962 fiscal year, public assistance payments to a monthly average of 133,395 persons totaled $90,653,480. This amount included $36,853,175 for the aged and $26,288,627 for dependent children.

Transportation and Communications.—A total of 438 miles of highway construction and reconstruction were completed in the 1961 fiscal year. *Highways and roads* on Jan. 1, 1961, totaled 60,362 miles (20,752 surfaced). These served 1,545,204 *motor vehicles* (as registered on Jan. 1, 1961), including 1,103,122 automobiles. Operating in the state were (1962) 18 *railroads* (using, Jan. 1, 1961, 4,987 line miles of track); (1961) 11 regularly scheduled *airlines;* and 96 commercial and municipal *airports and airfields.*

Communications media included (1961) 91 AM and 21 FM *radio stations;* 11 VHF and 3 UHF *television stations;* 26 daily *newspapers* (circulation, 988,285); and (Jan. 1, 1962) 365,300 business and 911,200 residential *telephones.*

Labor Force.—The state's labor force in July 1962 included 145,200 agricultural workers. Nonagricultural employees numbered 850,800, compared with 835,600 a year earlier and an average of 832,200 for the 12 intervening months. Of nonfarm employees, 28.3% were in manufacturing, 21.6% in trade, and 19.7% in government services. Unemployment in July 1962 stood at 53,300, compared with 60,700 a year earlier.

Manufacturing.—Manufacturing employed an average of 217,541 workers in 1961 and provided a payroll of $1,354,987,000. Estimated value added by manufacture amounted to $2,506,726,000.

LEADING WASHINGTON MANUFACTURES, 1961

Industry group	Average no. of employees	Salaries and wages (in thousands)	Est. value added by mfr.[1]
Aircraft and parts	62,200	$446,217	$825,501
Lumber and wood products	41,300	218,536	404,292
Food and kindred products	26,800	144,106	266,596
Paper and allied products	18,000	109,837	203,198
Chemicals and allied products	10,800	84,726	156,743
Smelting, refining, casting	9,400	64,000	118,400
Fabricated metals	6,400	40,846	75,565
Nonelectrical machinery	5,400	34,625	64,056
Stone, clay, glass products	4,900	30,151	55,779
Ship & boat bldg. & repair	4,600	29,786	55,104

[1] Value of product less cost of materials, supplies, fuel, electric energy, and contract work. (Source: Bureau of Business Research and Services, University of Washington.)

Fisheries.—The commercial fish and shellfish catch in 1961 totaled 120,379,000 pounds valued at $18,714,000. Leading species were salmon (29,896,000 pounds valued at $9,008,000), halibut (19,370,000; $3,448,000), and oysters (8,658,000; $1,652,000).

Mining.—In 1961, Washington ranked 33rd among the states in the value of its minerals, with 0.40% of the national total. The state was first in the output of olivine, second in magnesite, third in diatomite and peat, fourth in gold, and fifth in carbon dioxide.

WASHINGTON MINERAL PRODUCTION, 1961
(In short tons, except as noted)

Mineral	Quantity	Value
Aluminum	331,264	$168,921,000[1]
Clays[2]	145,000	138,000
Coal	191,000	1,381,000
Copper (recoverable content of ores)	66	40,000
Lead (recoverable content of ores)	8,053	1,659,000
Lime[3]	349,000	8,481,000
Peat	55,543	359,000
Sand and gravel	18,994,000	16,145,000
Stone	11,464,000	14,758,000
Uranium ore	175,327	3,582,000
Zinc (recoverable content of ores)	20,217	4,650,000
Other minerals	...	23,731,000
Total	...	$ 73,006,000[1,4]

[1] Value of processed minerals not included in total. [2] Excludes certain clays, value of which is included in "Other minerals." [3] Excludes recycled lime, value of which is included in "Other minerals." [4] Total has been adjusted to eliminate duplication in value of clays and stone. (Source: U.S. Bureau of Mines.)

Agriculture.—Cash farm income for the first nine months of 1962 (excluding government payments) totaled $401,657,000, compared with $395,-

WASHINGTON CROP STATISTICS

Crop (and unit of production)	Average 1951–60	1961	Est. 1962
Apples (1,000 bu.)	22,630	16,900	22,000
Apricots (tons)	12,230	8,500	11,500

Wheat (1,000 bu.)	71,315	55,272	66,825

(Source: U.S. Department of Agriculture.)

184,000 for the corresponding period of 1961. For the full year 1961, income comprised $358,874,000 from crops, $207,266,000 from livestock, and $12,141,000 in government payments. Principal income sources in 1961 were wheat, $111,973,000; wholesale milk, $81,088,000; cattle, $61,213,000; and apples, $50,324,000.

The state's 52,000 farms in 1959 had an acreage of 18,717,000 (4,412,000 in harvested cropland). Livestock on farms on Jan. 1, 1962, included 1,268,000 cattle and 5,700,000 chickens and (1961) 15,815,000 broilers. An average of 74,000 family and 37,000 hired workers engaged in farming in 1961.

Events, 1962.—The principal event of the year for the State of Washington was the Seattle World's Fair, which attracted an attendance of nearly 9.7 million to preview the advancements which science promises for the 21st century. Unlike most world's fairs, which consist primarily of temporary buildings, the Seattle fair left a legacy of imposing permanent structures to form the Seattle Center. The fair also left a record of being the first officially sanctioned world's fair in history to return a profit in a single season. But by year's end these happy consequences were being obscured by the political, civic, and commercial infighting over disposition of the fair's profits and over management and control of the Seattle Center. (See also CENTURY 21 EXPOSITION.)

In what most observers considered a surprise move, Congress reversed its earlier position and authorized the Atomic Energy Commission to produce and sell steam created from nuclear energy at its Hanford installation, near Richland, to the Northwest Public Power Association. Under the authorization, the association would produce and distribute electric energy to the Bonneville Power Administration for sale to Bonneville customers.

Although the Columbia River treaty providing for the cooperative development of the resources of the Columbia River was signed in 1961, the treaty's implementation still had not commenced by the end of 1962 because of continuing policy differences between the Province of British Columbia and the Canadian government over the exporting of power and financing arrangements. The treaty provides that Canada build three dams in British Columbia, which will, among other things, even the water flow of the Columbia and permit American power stations to generate more power, one half of which additional power is to be delivered to Canada.

Construction of the Evergreen Point Bridge, the second floating span over Lake Washington, continued during the year with the completion of both approaches. By year's end the pontoons were being towed into position for anchoring. Construction of the bridge, much delayed in earlier years by skirmishes between the state and Seattle over its location and feasibility, was once again delayed by a prolonged ironworkers' strike.

Three new multipurpose dams were completed and placed in operation during the year. Ice Harbor, on the Snake River, was dedicated on May 9; Priest Rapids, on the Columbia, was dedicated on June 2; and the dedication of Rocky Reach, also on the Columbia, was postponed until 1963.

In an otherwise lackluster political campaign, Democratic U.S. Sen. Warren G. Magnuson fended off a surprisingly strong challenge by the Rev. Richard G. Christensen, a former Lutheran minister and newcomer to politics, to win reelection on November 6. One Democratic and five Republican members of the U.S. House of Representatives were returned to their seats; incumbent Democrat Don Magnuson, however, was defeated by Republican K. W. Stinson.

WEST INDIES FEDERATION

The ten-member West Indies federation (officially The West Indies), an autonomous British dependency in the Caribbean Sea, came into being on Jan. 3, 1958, and was officially dissolved as of May 31, 1962. Dissolution occurred after Jamaica, and then Trinidad and Tobago (qq.v.), decided to withdraw from the federation and become independent states. The remaining eight members tentatively agreed to form a new federation (see below, *Events, 1962*).

The original federation included a chain of Caribbean islands extending in an arc from the Bahamas to Venezuela, with a total land area of 8,018 square miles and an aggregate population of 3,209,000 (est. 1961–62). Members of the proposed eight-member federation have a combined area of 1,598 square miles, and a total population of 703,000 (est. 1961–62). These British territories are as follows: Barbados; Leeward Islands (Antigua, Montserrat, and St. Christopher-Nevis-Anguilla); and Windward Islands (Dominica, Grenada, St. Lucia, and St. Vincent). In addition, the Cayman Islands and the Turks and Caicos Islands formerly were administered under the governor of Jamaica and had a special relationship with the federation. The seat of government of the ten-member federation was Port of Spain, Trinidad.

Statistics in this article pertain to the ten-member federation. Data on the British colonies formerly within the federation are presented separately below.

Government.—Until its dissolution on May 31, 1962, the federation was administered by a governor general (Lord Hailes), who appointed a cabinet of 10 ministers and a prime minister (Sir Grantly Adams) from among the legislators. The federal legislature consisted of a Senate of 19 nominated members (one from Montserrat and two from each of the other territories); and a House of Representatives of 45 elected members (Jamaica was represented by 17 members; Trinidad and Tobago by 10; Windward Islands, 8; Leeward Islands and Barbados, 5 each).

Education.—Education was the responsibility of the federation members, but the federal Ministry of Education promoted the training of teachers and administrators. Higher education for students from member territories was provided by the University College of the West Indies (now the University of the West Indies), Jamaica; the college enrolled 695 students in 1960.

Finance.—Federal revenues, 1961 est.: BWI$13,965,598; expenditures, BWI$13,944,505. (The British West Indian dollar equals U.S.$0.5833.) The main source of revenue was a mandatory levy on the unit territories not exceeding BWI$9,120,000 annually. British grants-in-aid for the Leeward and Windward groups totaled BWI$8,274,900 in 1960.

Transportation.—The federal government operated an interisland shipping service and an interisland air service. Many international airlines serve the region. British West Indian Airways, which is owned by the government of Trinidad and is operated in cooperation with Jamaica, Antigua, and Barbados, initiated nonstop service twice a week between Antigua and New York in February 1962.

Economy.—The economy of the ten-member federation was based on the production of sugar and bananas, the mining of bauxite (in Jamaica) and of petroleum (in Trinidad), and the growing tourist industry. In addition to sugar and bananas, crops grown for export included cocoa beans, coconuts, nutmegs, tomatoes, cotton, tobacco, and citrus fruits. Manufacturing was limited largely to the processing of sugar products, chiefly molasses and rum, and of other agricultural products. Minor industries included forestry and fishing.

Foreign Trade.—Total exports, 1961: £204.9 million; imports, £231.8 million. Jamaica and Trinidad in 1961 supplied 91% of the federation's total exports (chiefly sugar, petroleum, and bauxite), and received 85% of its total imports (principally foodstuffs, textiles, machinery, and vehicles). Chief trading partners were Great Britain and the United States.

Events, 1962.—The West Indies federation was dissolved on May 31 after the West Indies Bill providing for dissolution received its third and final reading in the British Parliament on April 2. The breakup of the four-year-old, ten-member federation followed Jamaica's decision (in a referendum of Sept. 19, 1961) to withdraw from the federation, and Trinidad and Tobago's announcement (Jan. 14, 1962) that it would also secede and become independent. The remaining eight members held a constitutional conference in London from May 9 to 24, and announced their intention of forming a new federal association to be called The West Indies Federation. It was agreed that the new eight-member federation would eventually become independent after a period of trial, that it would seek membership in the Commonwealth of Nations on attaining independence, and that its capital would be in Barbados. Common services of the old federation were to be maintained until permanent common service arrangements could be established to replace them. The London conference set up an advisory council of ministers from the eight colonies to draft a constitution, which would then have to be approved by the island legislatures before a final constitutional conference could be called to establish the proposed federation.

Formation of the new federation was complicated by the political situation in Grenada, where Herbert A. Blaize's National Party won the legislative elections of September 13 on a platform advocating Grenada's alliance in a unitary state with Trinidad and Tobago. Great Britain on June 18 had dismissed the Grenada government following an official inquiry into alleged financial irregularities. Eric Gairy, leader of the United Labour Party and former chief minister, had supported Grenada's inclusion in a new federation. Late in the year Grenada began talks with Trinidad and Tobago on their suggested alliance. There was speculation that some of the other Windward Islands, particularly Dominica and St. Lucia, might also consider joining Trinidad and Tobago, and that Antigua and St. Christopher-Nevis-Anguilla of the Leeward group might form an alliance with Jamaica.

W. R. F.

Barbados

The most easterly of the islands in the West Indies, Barbados (166 square miles) lies 102 miles east of St. Vincent (Windward Islands). The population (1962 est.) is 242,000, of which over 90% is Negro. Barbados has one of the highest population densities in the world—about 1,450 persons per square mile. Bridgetown (1960 pop., 11,289) is the capital and chief port.

Barbados has had full internal self-government since Oct. 16, 1961. The British-appointed governor (Sir John M. Stow, appointed in 1959) is assisted by a cabinet, a Privy Council, a 14-member appointed Legislative Council, and a 24-member elected House of Assembly. In the elections of December 1961, the Democratic Labour Party won 14 seats; the Labour Party, 5 seats; the National Party, 4 seats; and one seat was won by an independent.

Government revenue, 1962–63 est.: BWI$25,543,778; expenditure, BWI$27,895,967. In 1962 the government inaugurated a 3-year development program estimated to cost BWI$50.2 million. In 1960–61 there were 116 primary and 15 secondary schools, with an aggregate enrollment of 47,010 pupils. All-weather roads aggregate 675 miles. Barbados is served by 12 major shipping lines and 7 international airlines.

The economy is based on the production of sugar (158,458 tons in 1962, a slight decrease from 1961). Industries include sugar-processing plants, molasses factories, rum distilleries, iron works, a cigarette factory, and a brewery. The important tourist industry attracted 37,060 persons in 1961 (35,535 in 1960), and earned BWI$15,939,481. Tourist facilities include 57 hotels and guest houses, capable of accommodating 2,000 tourists at one time. Total imports, 1961: BWI$80,282,100; exports, BWI$43,176,800, including sugar, BWI$27,199,057; molasses, BWI$3,602,507; and rum, BWI$2,199,057.

Cayman Islands and the Turks and Caicos Islands

These island groups lying northwest and northeast of Jamaica were formerly under the administration of the governor of Jamaica. After May 31, 1962, they were directly under control of the British Colonial Office, but continued to be served by the joint services of the former West Indies federation.

Cayman Islands.—Lying about 150 miles northwest of Jamaica, the Cayman Islands (area, 100 square miles; 1960 pop., 8,511) comprise the islands of Grand Cayman (1960 pop., 7,025), Little Cayman, and Cayman Brac. The capital is Georgetown (pop., 2,705), on Grand Cayman. The islands are under an administrator (Jack Rose), who is assisted by a 5-member Executive Council selected from the 18-member Legislative Assembly, which is elected by universal suffrage. Free education is provided by 10 elementary schools (1,014 pupils in 1961) and 2 private secondary schools. Government revenue, 1961: £229,542; expenditure, £218,061.

Fishing is the principal occupation. About 2,000 live turtles are shipped annually to the United States. An important cottage industry is the manufacture of rope from thatch palm. Total exports, 1960: £31,807; imports, £750,000. The growing tourist industry attracts many visitors from the United States.

Turks and Caicos Islands.—Comprising some 30 islands (8 inhabited) lying southwest of the Bahamas and 450 miles northeast of Jamaica, the Turks and Caicos Islands have an area of 166 square miles, and a population (1960 census) of 5,716. Grand Turk (est. pop., 2,180) is the seat of the government, and the site of a cable relay station, a guided missile observation post, and a naval facility. An administrator is assisted by a Legislative Assembly of 15 members (including 9 elected) and an advisory Executive Council of 5 members (2 elected). Government revenue, 1961: £256,916; expenditure, £239,027. Free education is provided by 13 government schools (1,049 pupils in 1961). Exports, 1960: £88,462; imports, £216,602. Chief exports are salt (produced by solar evaporation), sisal, crawfish, and conchs.

Leeward Islands

The Leeward Islands lie east and southeast of Puerto Rico and north of the Windward Islands. The four British colonial presidencies in the Leeward group formed a federation until 1958, when the territories, excepting the British Virgin Islands (q.v.), joined the West Indies federation as independent units. The population is predominantly Negro.

	Area (sq. mi.)	Population[1]	Capital
Antigua[2]	170.5	54,354	St. John's (13,500[3])
St. Kitts-Nevis-Anguilla[4]	152	56,630	Basseterre (15,747[1])
Montserrat	32.5	12,157	Plymouth (2,500[3])
Total[5]	355	123,141	

[1] Census of April 7, 1960. [2] Antigua (108 sq. mi.) and dependencies: Barbuda (62 sq. mi.) and Redonda (0.5 sq. mi.). [3] 1956 est. [4] St. Kitts or St. Christopher (68 sq. mi.), Nevis (50 sq. mi.), and Anguilla (34 sq. mi.). [5] Excludes the British Virgin Islands.

The constitutional changes promulgated for the Leeward Islands as a result of the conference held in London on June 19–22, 1961, did not take effect because of the dissolution of the West Indies federation in 1962. The constitutional arrangements in 1962 remained largely unchanged from those introduced on Jan. 1, 1960. Each of the territories is headed by an administrator appointed by the British crown. Exercising general control of the government, the administrator is president of the Executive Council and appoints the chief minister.

Antigua.—The administrator (Ian G. Turbott) is assisted by a 6-member Executive Council and a 14-member Legislative Council, 10 of whom are elected. In the elections held on Nov. 28, 1960, the Trades and Labour Union Party won all 10 seats. The estimated budget for 1961 was balanced at BWI$9,400,895. There are 43 primary schools and 8 secondary schools.

Production of sugar, the chief crop, totaled 21,054 tons in 1961, valued at an estimated BWI$4,623,500. Rum and molasses are important by-products. The cotton crop in 1961 totaled 244,535 pounds. Total exports, 1961:

BWI$4,552,095; imports, BWI$19,525,703. Main roads aggregate 64 miles; secondary roads, 85 miles. Coolidge Airfield, which was expanded in 1961 to accommodate jet aircraft, serves Pan American World Airways, British West Indian Airways, Leeward Island Air Transport, and Trans-Canada Airlines. Tourists numbered 25,380 in 1960.

Montserrat.—An administrator (Donald A. Wiles) is assisted by a 6-member Executive Council and a 10-member Legislative Council, 7 of whom are elected. In elections of March 2, 1961, the Montserrat Labour Party won 5 seats, and the United Workers Movement, 2 seats. The estimated budget for 1961 was balanced at BWI$2,149,391. There are 15 primary schools and one secondary school.

Montserrat's main crop is cotton. In 1961, exports of cotton lint totaled 260,122 pounds; cottonseed cake, 163,475 pounds. Minor export crops include bananas, tamarinds, and vegetables. Total exports, 1961: BWI$307,214; imports, BWI$2,140,325. Economic development has been concentrated on improving banana cultivation and water supplies, and on building roads. Ship arrivals in 1961 totaled 590. Asphalted public roads aggregate 60 miles; secondary roads, 58 miles. Blackburne Airfield is located on the east coast.

St. Kitts (or St. Christopher)-Nevis-Anguilla.—The administrator (Lt. Col. H. A. C. Howard) is assisted by an 8-member Executive Council and a 14-member Legislative Council (10 elected members). In elections on Nov. 17, 1961, the Labour Party won 7 seats; the United National Party, 2 seats; and one seat was won by an independent. Estimated government revenue, 1960: BWI$6,759,921; expenditure, BWI$7,163,309. In 1960 there were 40 primary schools (with 13,806 pupils) and 5 secondary schools.

Principal products, 1960: sugar, 48,648 tons (BWI$9,388,106); cotton lint, 35,567 pounds (BWI$33,784); and molasses, 1,342,666 gallons (BWI$85,681). Total exports, 1960: BWI$10,417,000; imports, BWI$12,300,000. Sugar companies on St. Kitts operate 36 miles of railroad. Highways aggregate 79 miles. The territory is served by British West Indian Airways, Leeward Islands Air Transport, and KLM Royal Dutch Airways, which use the airport 2 miles north of Basseterre. There were 6,315 visitors in 1960.

Windward Islands

Lying between Guadeloupe and Trinidad, the Windward group comprises the islands of Dominica, Grenada, St. Lucia, and St. Vincent. The four British colonial presidencies formed a federation until 1958 when they joined the West Indies federation as independent units. About 95% of the population is Negro.

	Area (sq. mi.)	Population[1]	Capital (with pop.[1])
Dominica	290	59,864	Roseau (10,422)
Grenada[2]	133	88,677	St. George's (25,894)
St. Lucia	238	86,194	Castries (17,505)
St. Vincent	150	79,948	Kingstown (15,981)
Total	811	314,683	

[1] Census of April 7, 1960. [2] Including the Grenadines, administered in part by Grenada and in part by St. Vincent; Carriacou (area, 13 sq. mi.; 1961 pop. est., 6,646), largest island in the Grenadines, is administered by Grenada.

The constitutional changes promulgated for the Windward Islands as a result of the conference held in London on June 19–22, 1961, were shelved in 1962 as a result of the dissolution of the West Indies federation. The constitutional arrangements in 1962 remained largely unchanged from those of Jan. 1, 1960. Each of the islands is governed by an administrator appointed by the British crown.

Dominica.—The administrator (Col. Alec Lovelace) is assisted by an Executive Council and a 15-member Legislative Council, of whom 11 members are elected. In elections of Jan. 17, 1961, the Labour Party won 7 seats; the United People's Party, 3 seats; and one seat was won by an independent. The estimated government budget for 1960 was balanced at BWI$5,634,441, including Colonial Development and Welfare grants of BWI$1,176,491. The territory has 49 primary and 4 secondary schools.

Total exports, 1961: BWI$7,303,589; imports, BWI$10,639,447. Main exports included bananas, BWI$4,783,904; lime juice, BWI$890,654; lime oil, BWI$379,181; copra, BWI$492,727; cocoa beans, BWI$82,436; and bay oil, BWI$235,763. There are 169 miles of surfaced roads, and 160 miles of secondary roads. Air arrivals numbered 2,726 in 1961. A new airfield was built at Melville Hall in northeast Dominica, approximately 30 miles from Roseau.

Grenada.—The administration is headed by an administrator (James M. Lloyd), who is assisted by an Executive Council and a 14-member Legislative Council, 10 of whom are elected. Following the suspension of the constitution on June 18, 1962, new elections were held on Sept. 13, 1962, in which the National Party won 6 seats and the United Labour Party, 4 seats (see above, *Events, 1962*). Estimated government revenue, 1962: BWI$8,789,869, including BWI$142,001 in Colonial Development and Welfare grants; expenditure, BWI$8,881,465. In 1961 there were 12 government and 44 grant-aided primary schools (aggregate enrollment, 23,706), and 6 secondary schools.

Total exports, 1961: BWI$5,770,907; imports, BWI$16,022,961. Main exports included cocoa (44,389 cwt.), BWI$2,298,584; nutmegs (7,659 cwt.), BWI$1,272,956; mace (1,564 cwt.), BWI$532,834; bananas (934,806 stems), BWI$1,465,917; and cotton (944 cwt.) BWI$47,591. There are 495 miles of roads, of which 400 are surfaced. Grenada is served by British West Indian Airways and Leeward Islands Air Transport. In 1961 the island was visited by 19,712 tourists, who spent an estimated BWI$1.8 million.

St. Lucia.—The administrator (Gerald J. Bryan) is assisted by an Executive Council and a 13-member Legislative Council, 10 of whom are elected. In elections on April 14, 1961, the St. Lucia Labour Party won 9 seats; the People's Progressive Party, 1 seat. Government budget estimates for 1961 were balanced at BWI$5,985,033. As of Dec. 31, 1961, there were 52 grant-aided primary schools, 1 government school, and 2 grant-aided secondary schools. In 1962, a program for the construction of 8 new primary schools was started; a secondary school was under construction; and a teacher-training college, for which the United States contributed $64,000, was built.

Total exports, 1960: BWI$5,604,582; imports, BWI$11,995,381. The chief export was bananas (3.5 million stems valued at BWI$5,313,214). Other exports included edible oils, rum, and lime juice. The island has 399 miles of roads and 2 airports.

St. Vincent.—The administrator (Samuel H. Graham) is assisted by an Executive Council and a 13-member Legislative Council, 9 of whom are elected. In elections on April 20, 1961, the People's Political Party won 6 seats; the Labour Party, 3 seats. The estimated government budget for 1962 was balanced at BWI$6,415,998, including BWI$1,117,000 in British grants in aid. There were 54 primary schools (with 15,336 pupils) in 1961, and 4 secondary schools.

Total exports, 1961: BWI$5,778,200; imports, BWI$12,631,200. Chief exports included bananas (46,497,574 pounds), BWI$2,637,326; arrowroot (6,057,932 pounds), BWI$1,316,694; copra (6,122,288 pounds), BWI$913,540; nutmegs (93,696 pounds), BWI$174,747; sweet potatoes (3,831,699 pounds), BWI$112,195; and sugar (500 tons), BWI$103,774. The island has 136 miles of paved roads and 260 miles of gravel roads. The airport at Arnos Vale, two miles from Kingstown, has been modernized. A deep-water harbor was under construction in 1962 at Kingstown.

J. L. L.

WEST NEW GUINEA

Comprising the western half of the Pacific island of New Guinea, West New Guinea is a territory temporarily administered since Oct. 1, 1962, by the United Nations. Formerly a dependency of the Netherlands, it is called West Papua by the Papuans, and West Irian, or Irian Barat, by the Indonesians. Including offshore islands, the area is estimated at 160,000 square miles, most of which comprises relatively inaccessible mountains, swamps, and jungles. The population of 750,000 (mid-1961 est.) consists largely of Papuan, Negrito, and Melanesian tribesmen, many of whom are primitive, and includes 18,000 nonindigenous Asians and some Europeans. The capital and chief port is Hollandia (1960 pop., 14,095).

Government.—The territory is under the administration of a United Nations Temporary Executive Authority (UNTEA) established by and under the jurisdiction of the United Nations secretary general. The chief executive officer is the United Nations administrator (Djalal Abdoh, appointed Oct. 22, 1962). In accordance with the Netherlands-Indonesia agreement of Aug. 15, 1962, the administration is to be transferred to Indonesia after May 1, 1963. The New Guinea Council, a consultative local representative body installed under Dutch rule in 1961, continued to function during the interim period of United Nations administration. The territory's annual budget deficit is to be shared equally by Indonesia and the Netherlands during the period of UNTEA rule.

Education and Religion.—School enrollment, 1959: 39,048 (16% of the school-age population). Enrollment by level of education: primary 37,574; secondary, 750; technical, 271; and teacher-training, 453. Animism is predominant; about 300,000 persons are classified as Christians.

Economy.—Chief subsistence crops (tons, 1960 est.): yams, sweet potatoes, and taro (180,000); sago (90,000); corn; rice; peanuts; bananas; and vegetables. Chief cash crops: copra (5,800 tons exported in 1960), nutmeg, mace, and cocoa. There is some stock raising and fishing. Production of crude petroleum, the principal export (248,504

metric tons in 1960), was valued at $3.2 million in 1960. Other mineral deposits include nickel, copper, bauxite, lead, zinc, cobalt, coal, gold, and silver. Production of timber and sawn lumber, 1960: 63,000 cubic meters. Total exports in 1960 were valued at $7,228,000; imports, $22,417,410. Motor roads total 470 miles.

Events, 1962.—The more than 350 years of Dutch rule in West New Guinea was terminated on Oct. 1, 1962, when the United Nations Temporary Executive Authority (UNTEA) took over control of the territory. The transfer of authority was carried out in accordance with the Netherlands-Indonesia agreement of Aug. 15, 1962, which calls for a period of interim rule by the United Nations before administration is transferred to Indonesia. Concluded under the auspices of the United Nations and the good offices of the United States, the agreement also provides for the eventual exercise of the right of self-determination by the people of the territory before the end of 1969.

Shortly before the conclusion of the agreement, tension between the Netherlands and Indonesia had reached a high pitch when two new Indonesian landings on the territory were reported in early August. By October, most Dutch women and children had left the territory in anticipation of the transfer of authority, and only about 500 of the original 2,700 Dutch officials agreed to remain.

Because of a lack of knowledge of local customs, the biggest problem facing the UNTEA was the administration of remote interior areas. In an attempt to prepare Indonesia for its administration of the territory, the UNTEA adopted a policy of relying on an increasing number of Indonesian officials. This policy, however, was criticized by the Dutch as having the effect of prematurely imposing Indonesia's political presence on the territory. Toward the end of 1962 there were indications that Djakarta might attempt annexation without the promised plebiscite. To forestall agitation, the United Nations administrator reiterated the determination of UNTEA to stand strictly by the terms of the August agreement.

(See also FAR EAST; INDONESIA; NETHERLANDS.)

WEST PAPUA. See WEST NEW GUINEA.

WEST VIRGINIA

A South Atlantic state of the United States, West Virginia ranks 41st among the states in area (land, 24,079 square miles; inland water, 102) and 33d in population (1,773,000 on July 1, 1962, a 4.7% decrease from the 1960 census figure of 1,860,421). Urban places with populations above 15,000 in 1960:

Beckley	18,642	Morgantown	22,487
Bluefield	19,256	Moundsville	15,163
Charleston (*capital*)	85,796	Parkersburg	44,797
Clarksburg	28,112	St. Albans	15,103
Fairmont	27,477	South Charleston	19,180
Huntington	83,627	Weirton	28,201
Martinsburg	15,179	Wheeling	53,400

Government.—Chief executive and judicial officers in 1962 included William W. Barron (Democrat), governor, serving a four-year term; Joe F. Burdett, secretary of state; John H. Kelly, treasurer; Denzil L. Gainer, auditor; C. Donald Robertson, attorney general; Chauncey Browning, Jr., superintendent of free schools; and Frank C. Haymond, president of the 5-member Supreme Court.

The West Virginia Leglislature, which convenes annually, comprised 25 Democrats and 7 Republicans in the Senate in 1962 and 82 Democrats and 18 Republicans in the House of Delegates.

Legislation, 1962.—Governor Barron's call to the short session of the Legislature contained 30 items—one for each day allotted for consideration of the budget plus high-priority matters—but from the first it was obvious that much of the time would be spent in consideration of:

WIDE WORLD

Dutch Governor Pieter Platteel of West New Guinea (right) leaves Hollandia on September 28, two days before the assumption of authority by the United Nations, represented by Brig. Gen. Said-Uddin Khan (l.) and José Rolz-Bennett.

(1) extending an insurance premium tax and the third cent of the state's 3-cent sales tax past the expiration date of June 30, 1962; (2) acting on apportionment of representation among those counties whose population has dwindled greatly; and (3) deciding what West Virginia's position should be on a revolutionary industrial idea—the mixing of finely powdered coal and water into "slurry" and shipping it via an interstate pipeline to east coast markets.

A record budget of $142.8 million was approved for the fiscal year 1962–63. Both taxes mentioned above were re-extended to June 30, 1963; Public Service Commission jurisdiction was expanded to cover the new slurry concept —but only after a 3½% tax was levied on net earnings from such shipments; and a constitutional amendment was proposed which would guarantee representation to every county, regardless of how small its population. Three other amendments (see below, *Events, 1962*) were readied for submission to the electorate in November (in addition to a liquor-by-the-drink proposal drafted by the 1961 session). Tentative steps were taken toward providing job training for the alarming numbers of high school drop-outs.

Finance.—In the 1961 fiscal year, revenue of $364,516,000 included $185,763,000 from state taxes and $74,414,000 in federal funds. Chief tax yields were from general sales and gross receipts ($85,808,000), motor fuels ($33,242,000), and licensing ($30,848,000). Spending of $360,002,000 included $104,256,000 for education, $47,475,000 for health, correction, and public welfare, and $83,699,000 for highways.

Education.—In the fall of 1962, public elementary schools staffed by 8,611 teachers enrolled 255,053 pupils; secondary schools with 6,728 teachers enrolled 180,979; and (1961–62) parochial schools with 590 teachers enrolled 16,202. College enrollment (fall 1961) totaled 31,587 in 37 institutions, including 3 junior colleges and 34 senior colleges and universities.

Operating expenditures for public schools in the 1961–62 school year totaled $116,250,182 ($279.87 per pupil) and outlays for construction and improvement amounted to $16,328,989. Revenue of $121,769,280 was drawn chiefly from state funds ($67,051,118) and local districts ($51,507,223). Teachers' salaries averaged $4,432. Spending for higher education (fiscal 1961) amounted to $36,545,000.

Public Assistance.—In the 1962 fiscal year, public assistance payments to a monthly average of 152,236 persons totaled $51,520,189. This amount included $37,306,970 for dependent children and $8,978,385 for the aged.

Transportation and Communications.—With 1,380 miles of highway construction and reconstruction completed during 1961, *highways and roads* on Jan. 1, 1962, totaled 36,274 miles (11,812 surfaced). These served 643,297 *motor vehicles* (as registered during 1961), including 483,546 automobiles. Operating in the state were (1961) 21 *railroads* (using 3,692 line miles of track); (1962) 6 regularly scheduled *airlines;* and 35 commercial and municipal *airports and airfields.*

Communications media included (1961) 53 AM and 7 FM *radio stations;* 9 VHF *television stations;* 31 daily *newspapers* (circulation, 483,161) and 89 other newspapers; and (Jan. 1, 1962) 127,000 business and 408,700 residential *telephones.*

Labor Force.—The state's labor force in mid-July 1962 included 46,400 agricultural workers. Nonagricultural employment totaled 438,100, compared with 444,500 a year earlier and an average of 444,700 for the full year 1961. Of nonfarm employees, 28% were in manufacturing, 18.7% in trade, and 14.2% in government services. Unemployment in mid-July 1962 stood at 66,900, compared with 77,800 a year earlier.

Manufacturing.—Manufacturing engaged 116,545 workers in 1960, including 90,159 in production, and provided a payroll of $629,330,000. Adjusted value added by manufacture totaled $1,401,341,000.

LEADING WEST VIRGINIA MANUFACTURES, 1960

Industry group	Total employees	Total payroll (in thousands)	Adjusted value added by mfr.[1]
Chemicals and products	22,212	$148,857	$511,182
Primary metals	23,055	157,952	350,511
Stone, clay, glass products	21,049	107,026	176,988
Food and kindred products	8,478	36,407	80,040
Fabricated metals	7,030	34,493	69,575
Printing and publishing	3,504	15,949	24,415
Lumber and wood products	7,188	16,765	23,282
Transportation equipment	1,876	11,649	17,440

[1] For definition, see footnote 1 in the article *Industrial Production.* (Source: *1960 Annual Survey of Manufactures.*)

Mining.—In 1961, West Virginia ranked seventh among the states in the value of its mineral output, with 3.80% of the national total. Coal supplied 81% of the total value, 5% less than in 1960. West Virginia was first in output of coal, third in calcium-magnesium chloride, and fifth in bromine.

WEST VIRGINIA MINERAL PRODUCTION, 1961
(In short tons, except as noted)

Mineral	Quantity	Value
Clays	475,000	$ 2,193,000
Coal	113,070,000	558,525,000
Coke	...[1]	...[1]
Natural gas (1,000 cu. ft.)	210,556,000	57,692,000
Natural gasoline (1,000 gal.)	34,095	2,296,000
Petroleum (1,000 bbl.)	2,703[2]	11,190,000[2]
Petroleum gases (1,000 gal.)	342,646	17,826,000
Salt, common	899,000	3,510,000
Sand and gravel	4,882,000	10,152,000
Stone	7,628,000	13,244,000
Other minerals	...	13,386,000
Total	...	$687,903,000[3]

Agriculture.—Cash farm income for the first nine months of 1962 (excluding government payments) totaled $65,960,000, compared with $69,745,000 for the corresponding period of 1961. For the full year 1961, income comprised $78,741,000 from livestock, $23,673,000 from crops, and $3,510,000 in government payments. Principal income sources in 1961 were cattle, $23,371,000; wholesale milk, $20,576,000; and broilers, $11,087,000.

The state's 44,000 farms in 1959 had an acreage of 6,063,000 (832,000 in harvested cropland). Livestock on farms on Jan. 1, 1962, included 530,000 cattle, 261,000 sheep, and 2,082,000 chickens, and (1961) 23,126,000 broilers. An average of 56,000 family and 13,000 hired workers engaged in farming in 1961.

WEST VIRGINIA CROP STATISTICS

Crop (and unit of production)	Average 1951–60	1961	Est. 1962
Apples (1,000 bu.)	4,773	5,500	5,000
Corn for grain (1,000 bu.)	6,351	4,240	3,763
Hay (1,000 tons)	948	955	819
Peaches (1,000 bu.)	699	750	650
Potatoes (1,000 cwt.)	798	585	520
Tobacco (1,000 lb.)	4,041	3,237	3,915
Wheat (1,000 bu.)	905	598	432

(Source: U.S. Department of Agriculture.)

Events, 1962.—With much of the nation's sociological and economic attention still fixed on underdeveloped areas of the Appalachians in 1962, West Virginia (in many respects the typical Appalachian state) continued to receive a lion's share of the effort directed toward the mountains, their people, and their dilemma. One inevitable result of this study and attention was that developments followed with such rapidity and of such magnitude in 1962 that a state accustomed to a leisurely appraisal of events was alternately cheered, discouraged, and confused.

As in much of the Appalachians, surveys showed the general economy up, employment improving, new industries appearing, and commerce index ratings encouraging. But at the same time, West Virginia's declining labor force continued its downward drift, cash farm income hit an all-time low, and unemployment continued to be a nagging reality. To counteract these conditions, West Virginia University announced plans in midsummer for an Appalachian Center for Resource Development, and by early December was readying a detailed prospectus. President Kennedy conferred in March with Governor Barron on federal aid to West Virginia, and in September campaigned in the state and promised continued attention to West Virginia's economic problems.

In the face of legislative approval of the controversial "slurry" concept (see above, *Legislation, 1962*), a group of the East's biggest electric power companies, including several operating in West Virginia, announced plans for a $58 million production plant just south of the Pennsylvania border. Included in the scheme is a 20-year contract for some 30 million tons of coal—"coal-by-wire," the proponents of slurry termed the plan, by which pulverized coal and water would be piped out of the state.

In July, the Defense Department dealt a heavy blow to the state's economy when the Sugar Grove radiotelescope project (in which more than $41 million already had been spent) was summarily closed. At year's end, the state's representatives in Washington still were attempting to find some profitable application for the extensive installations already completed in the mountain village.

General election interest centered around five proposed constitutional amendments—dealing essentially with the power of a governor to succeed himself, the power of a county sheriff to do likewise, the reapportionment of representation in the Legislature, certain powers and functions of the Legislature, and the legalizing of liquor-by-the-drink in what remains a 3.2% beer state. All amendments were decisively defeated. In the only closely contested congressional race, Republican Arch A. Moore, Jr., defeated Rep. Cleveland M. Bailey, a veteran of eight House terms, in a contest brought about by reapportionment. Four incumbent Democrats won easily—Mrs. Elizabeth Kee, Harley O. Staggers, John M. Slack, Jr., and Ken Hechler.

WESTERN EUROPEAN UNION. See EUROPE.

WESTERN PACIFIC ISLANDS, British

The Western Pacific High Commission administers the following British island groups in the western Pacific Ocean: British Solomon Islands Protectorate; Gilbert and Ellice Islands Colony; and the New Hebrides condominium. The British high commissioner for the territories (David C. C. Trench, appointed in 1961) has his headquarters at Honiara on Guadalcanal.

Areas and populations of the principal island groups are as follows:

Territory	Area (sq. mi.)	Population[1]	Capital
British Solomon Islands Protectorate	11,500	127,000	Honiara
Gilbert and Ellice Islands Colony	369	48,000	Tarawa
New Hebrides (condominium)	5,700	61,000	Vila
Total[2]	17,569	236,000	

[1] 1961 est. [2] Separate islands under the jurisdiction of the Western Pacific High Commission but not included in the above groups are Starbuck, Malden, Flint, Caroline, Vostok, and other West Pacific Islands not administered by the governor of Fiji, or by Australia, New Zealand, and other nations.

British Solomon Islands Protectorate.—Extending over an ocean area of 375,000 square miles, the protectorate includes the Solomon Islands (except Bougainville and Buka), and the Santa Cruz Islands. The principal islands are Guadalcanal, the largest island (area, 2,500 square miles); and Malaita, the most populous island (1958 pop. est., 46,000). Other important islands are Florida, Tulagi, San Cristobal, Rennell, New Georgia, Santa Isabel, Choiseul, and Ontang Java. The population consists chiefly of Melanesians (1959 pop. est., 118,000).

The protectorate is administered by the British high commissioner, who is assisted by a Legislative Council and local government councils. Estimated government revenue in 1962 was £A1,904,505, including a British grant in aid of £A512,435 and Colonial Development and Welfare grants totaling £A336,720 (the Australian pound equals U.S.$2.24). School enrollment, 1959: 15,183 (38% of the school-age population), most of whom were enrolled in primary schools. There is a government secondary school on Malaita, and a teacher and vocational training center on Guadalcanal.

Exports in 1961 totaled £A1,866,484; imports, £A2,045,663. Chief exports are copra (valued at £A1,696,192 in 1961), timber, trochus shell, and crocodile skins. Small quantities of cocoa were also exported in 1961–62. Rice is cultivated on a limited and experimental basis. Airfields near Honiara which were constructed on Guadalcanal during World War II are used by Trans-Australia Airlines and Fiji Airways. Honiara also has wharfage facilities. There is a broadcasting service for the islands.

Gilbert and Ellice Islands Colony.—The islands of the colony are scattered over an area of about 1 million square miles. Principal island groups (with district headquarters) are: Gilbert Islands (Tarawa), Ellice Islands (Funafuti), Phoenix Islands (Canton), Line Islands (Christmas Island), and Ocean Island. Canton and neighboring Enderbury (area, 27 square miles; 1960 pop., 320) have constituted since 1939 an Anglo-American condominium, created for the purpose of administering aviation and communications, including the Canton international airport.

A resident commissioner (Valdemar J. Andersen) administers the colony. Estimated government revenue in 1962 totaled £A664,017; expenditure, £A752,567. About two thirds of the school-age population is enrolled in government and mission schools. In 1961 there were 27 government primary schools (with 1,485 pupils), 219 grant-aided mission schools, and 7 secondary schools. Exports of copra, the chief crop, totaled 6,187 tons in 1961; phosphate, 335,600 tons. There are about 200 miles of roads, including 40 miles of all-weather roads.

New Hebrides.—A 400-mile chain of 37 islands situated west of Fiji and northeast of New Caledonia, the New Hebrides are an Anglo-French condominium. The largest islands are Espiritu Santo and Malekula. The capital is Vila, on Efate (Vaté). The territory is administered by a British and a French resident commissioner, who are responsible, respectively, to the British high commissioner for the Western Pacific Islands and the French high commissioner (who is also the governor of New Caledonia, q.v.). Condominium revenue in 1959 totaled £603,820; expenditure, £552,123. Education is provided by 22 British and 15 French mission schools, and 3 French government and one British government-built school. French schools enrolled 2,322 primary pupils in 1960. Chief exports are copra (35,067 metric tons in 1959), coffee, cocoa, and frozen fish. Total exports, 1959: £2,666,424 (mostly to France); imports, £2,036,020 (mostly from Australia).

J. L. L.

WESTERN SAMOA

The Independent State of Western Samoa comprises a group of islands in the South Pacific, situated some 2,200 miles south of Hawaii. The total land area is 1,130 square miles. Savai'i (area, 703 sq. mi.) and Upolu (430 sq. mi.) are the principal islands. The population (Sept. 25, 1961, census) is 114,427, of which 101,288 are Samoans, 11,813 part-Samoans, 688 Europeans, and 522 other Pacific islanders. Upolu has a population of 82,479; Savai'i, 31,948. Apia (pop., 21,699), on Upolu, is the capital and chief port.

Government.—A former United Nations trust territory administered by New Zealand from 1946, Western Samoa became an independent state on Jan. 1, 1962. The representatives of the two royal families of Tupua (Tupua Tamasese Mea'ole) and Malietoa (Malietoa Tanumafili II) serve jointly as head of state. The executive branch of government is headed by a prime minister (Fiame Mata'afa Faumuina Mulinu'u II), who heads a cabinet of eight members. The Legislative Assembly consists of 41 members representing Samoan constituencies and 5 members representing European voters.

Finance.—Government revenue, 1961: £NZ1,539,870; expenditure, £NZ1,763,077. The Samoan and New Zealand pound have the same value; one pound equals about U.S.$2.80.

Education.—In 1961, 34,828 pupils attended government and mission schools. Facilities for higher education are provided by Samoa College in Apia, St. Mary's College (a Roman Catholic institution) at Vaimoso, and Avele Agricultural College in Apia. Government expenditure on education totaled £NZ265,561 in 1961, and New Zealand contributed an additional £NZ80,000.

Transportation and Communications.—The road network aggregates 400 miles, including 300 miles of main roads. Western Samoa is linked with Tahiti, Fiji, and Tonga (and through them with New Zealand) by steamship and air passenger services. Daily flights to Tutuila, in American Samoa, are provided by Polynesian Airlines.

Production.—The economy is based on subsistence agriculture and fishing. The principal food crops are taros, bananas, and coconuts. Principal exports, 1961; copra, 12,922 tons (valued at £NZ672,899); bananas, 560,422 cases (£NZ644,495); and cocoa, 4,101 tons (£NZ597,592). Total exports, 1961: £NZ1,962,531; imports, £NZ2,536,188. Chief imports are meat, sugar, and cotton goods. Most of Western Samoa's trade is with New Zealand and Great Britain.

Events, 1962.—Western Samoa became an independent state on Jan. 1, 1962, after 47 years of administration by New Zealand. Its independence was quickly recognized by many countries of the world, including the United States and the Soviet Union. New Zealand offered the new state £45,000 annually over a five-year period for the strengthening of Samoa's administrative system, in addition to the annual subsidy for education.

WHITE, Byron Raymond

U.S. Supreme Court justice: b. Fort Collins, Colo., June 8, 1917.

Son of a lumberman and Republican mayor of Wellington, Colo., where he grew up, Byron R. ("Whizzer") White graduated first in his class in 1938 from the University of Colorado at Boulder, where he also excelled in sports and was named on the All-American football team as a halfback in 1937. He attended the University of Oxford on a Rhodes scholarship in 1939, then received his law degree (*magna cum laude*) from Yale University. Before and during his attendance at Yale, he played professional football with Pittsburgh and Detroit to help finance his education, and was named to the National Football Hall of Fame in 1952. Serving as a naval intelligence officer on an aircraft carrier during World War II, he won two bronze stars. He was law clerk to Chief Justice Fred M. Vinson of the Supreme Court (1946–47), then returned to Colorado and became a partner in a Denver law firm, proving his versatility in corporate, tax, and contract legal practice.

White had met John F. Kennedy in London in 1939, and again in the Solomon Islands in 1943 when both were in the Navy. A Democrat, he headed the Colorado Kennedy Committee in the 1960 primary and became the national chairman of Citizens for Kennedy in the campaign. White was appointed deputy attorney general of the United States by President Kennedy in January 1961.

President Kennedy nominated White on March 30, 1962, to be associate justice of the U.S. Supreme Court, replacing Charles Evans Whittaker of Missouri. White's nomination was confirmed by the Senate on April 11 and he was seated on the court on April 16, the first U.S. Supreme Court justice from Colorado and the youngest member of the present court. On August 13 he was named winner of the 1962 Gold Medal Award by the National Football Foundation.

WHOLESALE SELLING

The United States economy in 1962 continued its moderate recovery from the early 1961 recession, and wholesalers participated in the increased activity. Wholesalers' sales in the first six months of 1962 totaled over $76 billion, or 6% higher than in the corresponding period of 1961. There was a similar increase in the physical volume of goods passing through wholesale channels.

Wholesalers' inventory book values totaled $13.5 billion in mid-1962, an increase of only $200 million in the preceding year. Inventories did not rise as much as sales during this period, so that the stock-sales ratio declined to a relatively conservative level.

WHOLESALERS' SALES, 1960–62
(In millions of dollars)

Category	Full year		First 6 months	
	1960	1961	1961	1962
All wholesale trade[1]	147,993	150,675	72,658	76,176
Durable goods establishments	53,334	51,412	24,705	26,631
Nondurable goods establishments	94,659	99,263	47,953	49,545
Merchant Wholesalers: Selected Categories				
Total[1]	137,281	139,549	67,021	70,978
Durable goods[1]	56,803	56,905	27,184	29,604
Automotive	7,883	7,803	3,840	4,043
Electrical, electronics, and appliances	8,660	8,630	3,980	4,368
Furniture, home furnishings	2,910	2,931	1,390	1,461
Hardware, plumbing, heating goods	6,422	6,299	2,992	3,160
Lumber, construction material	6,680	6,562	3,123	3,203
Machinery, equipment, supplies	14,287	14,404	6,935	8,154
Metals, metalwork (except scrap)	5,708	5,851	2,818	3,152
Scrap, waste material	3,296	3,446	1,687	1,647
Nondurable goods[1]	80,447	82,645	39,838	41,375
Grocery, confectionery, meat	27,661	28,690	14,130	14,939
Beer, wine, distilled spirits	7,424	7,636	3,505	3,686
Drugs, chemicals	5,370	5,485	2,691	2,803
Tobacco	4,164	4,279	2,060	2,189
Dry goods and notions	2,298	2,400	1,185	1,222
Apparel and footwear	2,859	2,925	1,314	1,422
Paper	4,153	4,275	2,078	2,203
Coal	802	778	384	392
Farm supplies	1,941	1,995	1,151	1,127

[1] Totals include data for some kinds of business not shown separately. (Source: U.S. Department of Commerce.)

Virtually every important line of wholesale trade contributed to the overall sales advance; the only exceptions were poultry and iron and steel scrap. There was a tendency, however, for sales of producers' machinery and equipment to show the largest relative gains, and construction materials the smallest, while the consumer goods market rose in line with the overall average.

Wholesalers of durable goods reported generally increasing sales in the opening months of 1962. For the first half-year, shipments were valued at $26.6 billion, 9% above the corresponding period of 1961. This compared with an increase of less than 4% among wholesalers of nondurable goods.

By major kinds of durable goods trades, the best sales performances in the first half of 1962 were the 25% increases reported by suppliers of industrial machinery and equipment and of construction machinery. Deliveries by metal distributors and by the electrical appliances, television, radio, and electronics group were also above average—12 and 9%, respectively, higher than in the first half of 1961.

Furniture wholesalers' sales fell appreciably in the early months of 1962, but recovered somewhat in the spring. For the first half year, sales were up about 3% from a year earlier. Home furnishings sales were 6% higher over this period, as were shipments of hardware, plumbing and heating supplies.

Merchant wholesalers dealing primarily in nondurable commodities registered sales totaling $41.4 billion in the first half of 1962, a 4% increase from the first 6 months of the previous year. Chemicals and apparel showed the largest relative gains over this period—11 and 8%, respectively. Tobacco, paper products, and food wholesalers each reported 6% increase. In the latter group, however, there was a considerable diversity in sales performance among the several component trades. Meat distributors registered a 15% advance from the first 6 months of 1961 and fruit and vegetable sales rose 7%, while wholesalers of groceries showed a sales increase of only 3%, and shipments of poultry and poultry products declined by 6%.

WILHELMINA

Queen of the Netherlands (1898–1948): b. The Hague, the Netherlands, Aug. 31, 1880; d. Apeldoorn, Nov. 28, 1962.

News of Wilhelmina's birth was greeted with great joy among the Dutch people. Her father, William III, had had two sons by his first wife but by 1880 both were dead and the king was 63 years old. When William III died on Nov. 23, 1890, the 10-year-old princess immediately succeeded to the throne under a regency exercised by her mother, Queen Emma.

Wilhelmina (1880–1962)

M. C MEYBOOM, AMSTERDAM

On Sept. 6, 1898, at the age of 18, Wilhelmina (whose full name was Wilhelmina Helena Pauline Maria) was inaugurated queen. (Sovereigns of the Netherlands are not crowned; they take an oath of allegiance.) The young queen was married on Feb. 7, 1901, to Vladmir Albert Ernst, Duke of Mecklenburg-Schwerin. (The queen's consort was given the title Prince Hendrik of the Netherlands but, despite her wishes, was never granted a money allowance or made first prince of the realm. He died on July 3, 1934.) The royal couple's only child, Princess Juliana, was born on April 30, 1909.

Wilhelmina's influence is generally credited with having kept her country neutral during World War I. During the inter-war period, the pious, frugal, hardworking queen not only performed her royal duties with distinction but in private life earned a reputation as a good businesswoman in managing the considerable fortune of the House

of Orange. Her court was simple and unpretentious.

When the Nazi blitzkrieg overwhelmed Dutch resistance in World War II, Queen Wilhelmina sailed to England on May 13, 1940. Establishing her wartime residence in London, she became a symbol of Dutch resistance to the Nazi occupation and the Japanese conquest of the Netherlands' rich Far Eastern empire.

In 1948, Wilhelmina announced her decision to abdicate in favor of her daughter, Princess Juliana, explaining that a younger person was needed to perform the royal duties. Her retirement became effective on Sept. 5, 1948, ending a reign of exactly 50 years. Assuming the title Princess Wilhelmina of the Netherlands, she lived quietly in retirement until her death.

WILKINS, Maurice H. F. See NOBEL PRIZES.

WINDWARD ISLANDS. See WEST INDIES FEDERATION.

WINE

World production of wine, which increased from 5.113 billion gallons in 1950 to 6.382 billion gallons in 1960, dropped to 5.729 billion gallons in 1961. United States production in 1961 was 169,328,000 gallons, of which 146,078,000 gallons, or 86.3%, came from California.

Lowered tariffs among countries of the European Economic Community (Common Market) resulted in a great increase in the demand for and price of French premium wines, particularly those of the Bordeaux region. There was apprehension among American wine growers that prospective lowering or abolishing of United States tariffs on imported European low-priced wines might seriously affect the industry.

The 1961 vintage in France was reported to have been of exceptionally high quality.

California vintners shipped 134,800,000 gallons of wine into distribution channels in 1961, compared with the previous record high of 131,739,000 gallons in 1961. In the first nine months of 1962, 91,014,900 gallons were shipped, and year-end estimates were that the total 1962 shipments would be about the same as in 1961. There were no available estimates of the 1962 New York State wine shipments, but the grape crop was estimated at 99,000 tons, compared with 124,000 tons in 1961 and 83,000 tons a year for the 1950–59 seasons. (The average annual New York State wine production in the 1952–61 decade was 4,500,000 gallons.)

About 25% of the 1961 California dessert wine production was set aside by growers in an effort to halt a decrease in prices caused by overproduction. United States consumption of table wines has been increasing, but that of dessert wines, such as sherry and port, has been decreasing. Consumption of so-called flavored natural wines, of which almost none were consumed in 1956, increased to 13,272,971 gallons in 1961. (This wine is usually sweet, mildly flavored with herbs, and usually fortified to an alcohol content of 20%.)

WORLD WINE PRODUCTION, 1960 AND 1961

Region	Production (in gallons) 1960	1961
World	6,382,339,500	5,729,262,984
Algeria	167,040,895	414,248,000
Argentina	469,244,033	441,083,437
France	1,619,221,311	1,286,646,550
Germany, West	196,980,880	94,223,620
Hungary[1]	78,334,000	78,334,000
Italy	1,464,927,000	1,398,140,000
Portugal	316,420,597	200,669,315
Rumania[1]	159,000,000	159,000,000
Spain	563,300,837	534,870,223
USSR	196,762,500	195,040,000
United States	166,541,000	169,328,000[1]
California	143,269,000	134,078,000
Yugoslavia	93,757,000	108,890,000

[1] Estimated.

Among important recent developments in wine technology are cold fermentation, control of color by the use of activated carbons, increased use of ferrocyanide to remove traces of heavy metals, and the use of ion-exchange resins to prevent deposits of cream of tartar in bottled wines.

Wine production statistics are shown in the accompanying table, compiled with the help of the Office International de la Vigne et du Vin, Paris.

W. V. CRUESS,
Professor of Food Technology, Emeritus, University of California, Berkeley.

WINNIPEG

The capital of Manitoba, Winnipeg is the seventh most populous city and the fourth-ranking urban area in Canada (1961 census population: city proper, 265,429; Metro Winnipeg, 474,374). It lies 760 feet above sea level at the confluence of the Red and Assiniboine rivers. The city has an area of 15,723 acres of land and 469 acres of waterways, with 103 public parks, squares, and athletic fields.

The municipal government is carried on under a special provincial charter of incorporation granted in 1873 and revised and consolidated in recent years. The City Council comprises a mayor (Stephen Juba, re-elected on Oct. 24, 1962) and 18 aldermen (3 elected annually from each of the 3 city wards). All serve 2-year terms.

Legislation for Greater Winnipeg metropolitan government was passed at the 1960 session of the Manitoba Legislature. The government of Manitoba appointed the first chairman, Richard H. G. Bonnycastle. On Oct. 26, 1960, 10 councilors were elected to represent the 10 divisions of Metro Winnipeg, which has an area of about 600 square miles and encompasses all or part of 19 municipalities.

Metro Winnipeg is the industrial center of the Canadian prairie provinces. Its manufactures include flour, processed foods, printed matter, railway rolling stock, clothes, malt products, furniture, furs, and cotton goods.

Among the transportation lines serving Winnipeg are the Canadian Pacific Railway and Canadian National Railways, which have western headquarters in the city; the Soo Line Railroad, Great Northern Railway, and Northern Pacific Railway, from the United States; Trans-Canada Air Lines, Transair Limited, and (from the United States) Northwest Orient Airlines. A new terminal for Winnipeg International Airport is expected to be completed in 1963. There are four radio and two television stations in Winnipeg broadcasting in English; one French television station; and a French radio station in adjoining St. Boniface.

Construction permits in the Metro area totaled $33 million for the first six months of 1962. The Manitoba Legislature approved legislation to permit provincial assistance for slum clearance and urban renewal. Construction of Winnipeg's $7 million city hall was under way in 1962, and the new Memorial Park (facing the Legislative Building) was officially opened in October. In the same month, work was begun on the Greater Winnipeg Floodway diversion project.

Manitowoc	32,275	West Allis	68,157
Menomonee Falls	18,276	Whitefish Bay	18,390
Milwaukee	741,324	Wisconsin Rapids	15,042

Government.—Chief executive and judicial officers in 1962 included Gaylord A. Nelson (Democrat), governor; Warren P. Knowles, lieutenant governor; Robert C. Zimmerman, secretary of state; Mrs. Dena Smith, treasurer; John W. Reynolds, attorney general; Angus B. Rothwell, superintendent of public instruction; and Timothy Brown, chief justice of the 7-member Supreme Court, who succeeded Grover Broadfoot after the latter's death on May 18.

The Wisconsin Legislature, which convenes in odd-numbered years, comprised (1962) 20 Republicans and 12 Democrats (with 1 vacancy) in the Senate, and 55 Republicans and 45 Democrats in the Assembly.

Legislation, 1962.—The Legislature was called into special session on June 18 to consider the reapportionment of the state's legislative and congressional districts, and adjourned on July 31 after having passed bills to accomplish this task. The governor, however, vetoed these bills. This special session was made necessary by the initiation of cases in the courts by Attorney General John W. Reynolds to force reapportionment according to constitutional mandate. (See below, *Events, 1962.*)

Finance.—Total general fund receipts (1961–62 fiscal year), $483,144,384; total expenditures, $484,492,193; and general fund deficit, $1,347,809. State tax revenues totaled $490,152,803, including $53,821,538 from corporate income taxes, $144,448,248 from individual income taxes, $120,482,698 from motor vehicle taxes, and $171,400,319 from special sales and use taxes, occupational licenses, inheritance and gift taxes, and public utility taxes.

Education.—In the 1960–61 school year, public elementary schools staffed by 19,998 teachers enrolled 523,766 pupils; secondary schools with 9,719 teachers enrolled 198,597. In the fall of 1961, 81,773 students were enrolled for credit in institutions of higher learning.

Expenditures for public elementary and secondary education in the 1960–61 school year totaled $379,459,298 ($378.81 per pupil). Overall expenditures for public education, including higher education, amounted to $505,780,847. Salaries of public elementary and high school teachers averaged $5,317 (elementary, $5,049; secondary, $5,868).

Public Assistance.—In the 1962 fiscal year, public assistance payments to a monthly average of 109,229 persons totaled $83,358,357. This amount included $37,383,842 for the aged and $23,662,518 for dependent children.

Transportation and Communications.—State and federal funds spent for highways in the 1961–62 fiscal year totaled $119,863,082, and county and local expenditures amounted to $13,138,451. State aid to counties and municipalities for roads totaled $55,920,578.

Highways and roads on Jan. 1, 1962, totaled 98,423 miles. By Sept. 1, 1962, there were 240 miles of the controlled-access Interstate System completed or under construction. Registered *motor vehicles* numbered 1,670,545 (1961–62), including 1,357,457 passenger cars. In 1962 the state's *railroads* covered 6,292 miles; there were 6 regularly scheduled *airlines*, 120 *airports and airfields*, and 8 seaplane bases.

Communications media included (1962) 80 AM and 39 FM *radio stations;* 16 *television stations;* (1961) 38 daily *newspapers* (circulation 1,173,229); and (Jan. 1, 1962) 414,663 business, 994,627 residential, and 192,818 rural *telephones.*

Labor Force.—The civilian labor force in September 1962 numbered 1,631,900, including 195,300 agricultural workers. Nonagricultural employment (including self-employed, unpaid family workers, and domestic workers in private households), totaled 1,385,600, compared with an average of 1,341,500 for the 12 preceding months. There were 47,400 unemployed workers in September 1962, compared with 56,800 a year earlier.

Manufacturing.—During 1961, manufacturing establishments in Wisconsin employed an estimated 318,300 production workers who received $1,616,429,256 in wages and who averaged $97.66 for an average workweek of 40.6 hours. In September 1962, wages had risen to $103.85 for an average workweek of 41.8 hours.

MAJOR WISCONSIN MANUFACTURES, 1960

Industry Group	Total employees	Total payroll	Adjusted value added by mfr.[1]
		(in thousands)	
Total	465,784	$2,552,198	$4,680,279
Nonelectrical machinery	81,210	501,289	827,207
Food and kindred products	63,658	306,506	705,387
Transportation equipment	45,363	286,327	565,723
Paper and allied products	35,956	209,317	461,417
Electrical machinery	44,476	245,577	454,584
Fabricated metal products	34,211	187,371	327,619
Primary metal industries	26,830	156,977	248,363
Printing and publishing	21,799	121,323	189,676

[1] For definition, see footnote 1 in the article *Industrial Production.*
(Source: *1960 Annual Survey of Manufactures.*)

Mining.—Mineral output in 1961 was valued at $72,886,000 (6% below the record year of 1960), accounting for 0.40% of the national total and ranking Wisconsin 34th among the states. More than half of the total value was provided by sand and gravel ($28,457,000), of which the state is a leading producer, and stone ($19,686,000). Other important minerals were iron ore and cement.

Agriculture.—Cash farm income for the first nine months of 1962 (excluding government payments) totaled $864,428,000, compared with $866,746,000 for the corresponding period of 1961. For the full year 1961, income comprised $1,002,398,000 from livestock and livestock products, $134,986,000 from crops, and $40,003,000 in government payments. Principal income sources in 1961 were dairy products, $610,754,000, including receipts for 282,977,000 pounds of creamery butter and 469 million pounds of American cheese; cattle, $159,269,000; hogs, $107,266,000; eggs, $46,472,000; and corn, $19,588,000.

The state's 131,215 farms had an acreage of 21,156,223 (9,599,094 in harvested cropland). Livestock on farms (Jan. 1, 1962) included 4,339,000 cattle (2,402,000 milk cows), 1,857,000 hogs, and 10,211,000 chickens, excluding commercial broilers. An average of 244,000 family and 29,000 hired workers engaged in farming during 1961.

WISCONSIN CROP STATISTICS

Crop (and unit of production)	Average 1951–60	1961	Est. 1962
Apples, commercial (1,000 bu.)	1,313	1,800	1,400
Barley (1,000 bu.)	2,845	1,395	1,290
Cabbage (1,000 cwt.)	1,879	1,796	1,596
Corn for grain (1,000 bu.)	99,261	120,377	103,422
Corn for canning (tons)	312,570	374,800	362,100
Cranberries (bbls.)	313,300	462,000	430,000
Flaxseed (1,000 bu.)	93	50	51
Hay, tame (1,000 tons)	8,459	9,160	9,534
Lima beans for canning (1,000 lbs.)	11,020	13,300	11,880
Oats (1,000 bu.)	131,530	130,032	122,248
Peas for canning (1,000 lbs.)	261,200	254,260	292,500
Potatoes (1,000 cwt.)	7,509	11,515	9,100
Snap beans for canning (tons)	27,250	47,200	59,000
Tobacco (1,000 lbs.)	21,111	22,464	20,460

(Source: U.S. Department of Agriculture.)

Events, 1962.—The November general elections provided a graphic example of the erratic behavior of Wisconsin voters. The Democratic candidate for governor, Attorney General John W. Reynolds, campaigning on a "no-sales-tax" theme, defeated his Republican opponent, Philip G. Kuehn, by a

narrow margin of 637,491 votes to 625,536. He thus became the only Democratic constitutional officer in the state capitol at the inauguration on Jan. 7, 1963. Reynolds will face a Legislature again controlled by Republicans (Assembly, 53 to 47; Senate, 22 to 11). The state's representation in the U.S. House of Representatives remained the same (6 Republicans, 4 Democrats). However, veteran Republican Sen. Alexander Wiley lost his Senate seat to Democratic Gov. Gaylord A. Nelson by a vote of 662,342 to 594,846.

A year-long dispute between Governor Nelson and the Republican-controlled Legislature over the issue of reapportionment highlighted the political scene. A series of legal moves by Attorney General John W. Reynolds to force redistricting failed, including a suit filed in federal court on April 13. The court held that the Legislature should do the apportioning. When the lawmakers failed to act, however, the three-judge federal panel asked Governor Nelson to call a special session, which was convened on June 18.

On July 2, the deadline set by the court for legislative action, Governor Nelson vetoed two bills passed by the Legislature, denouncing the measures as a "shameless partisan gerrymander." The next day the court appointed former state Supreme Court Justice Emmert L. Wingert as a special master to produce a plan for consideration by the panel. After Wingert found that there was not "a case for equitable relief at this time," the federal court dismissed the case without prejudice on August 14. Despite further wrangling the state was not reapportioned, and it remained to be seen what would be done by the 1963 Republican-controlled Legislature and Democratic Governor Reynolds. (See also REAPPORTIONMENT AND REDISTRICTING.)

Wisconsin's controversial parochial school bus law, which was to take effect on July 1, was declared unconstitutional by the state Supreme Court on June 5. The law would have compelled the state's 1,129 school districts to furnish bus transportation for private and parochial students (an estimated 60,000 in all).

The University of Wisconsin named a new president, Dr. Fred H. Harrington, on August 1. He succeeded Dr. Conrad Elvehjem, who died July 27. The Very Rev. William F. Kelley became president of Marquette University on February 18, replacing the Very Rev. Edward J. O'Donnell, who was named to the new post of university chancellor.

WIDE WORLD

WOOL

The 1962–63 world wool clip was expected to decline 35 million pounds to 5,633 million pounds, greasy basis. Smaller numbers of sheep in the United States were expected to reduce production (for the second consecutive year) to 306 million pounds.

Merino and crossbred wools used in textiles account for four fifths of the world's wool, and other types used in carpets for the rest. United States wool is not used in carpets.

World wool consumption expanded 19% from 1958 to 1961, reaching a total of 3,301 million pounds, clean basis, in 1961. In 1962, consumption was expected to be about the same as in 1961.

The United States consumed 418 million pounds in 1961, or 13% of total world consumption. Wool textiles took 263 million pounds, carpets 147 million, and other uses 8 million. From January through November 1962, United States textiles and carpet mills consumed 5% more wool than in the corresponding 1961 period.

WORLD PRODUCTION OF VIRGIN WOOL
(In millions of pounds, greasy basis)

Country and type	Average 1951–52 to 1955–56	1961–62	1962–63 Forecast	Percentage distribution
Australia	1,261	1,700	1,670	30
Argentina	393	413	385	7
New Zealand	434	587	605	11
Republic of South Africa	286	334	331	6
United States	296	318	306	5
Uruguay	199	185	185	3
USSR	484	760	780	14
Other countries	1,188	1,371	1,371	24
Total	4,541	5,668	5,633	100
Of which:				
Merino (fine)	1,725	2,327	2,300	41
Crossbred (medium)	1,680	2,078	2,083	37
Total apparel-type	3,405	4,411	4,383	78
Carpet type	1,136	1,257	1,250	22

(Source: Commonwealth Economic Committee.)

There was a possibility that apparel wool prices in 1962 would exceed 1961 levels as a result of broadening world demand in relation to available supplies. United States trade stocks were exceptionally low and required a one-third increase over 1961 imports to satisfy rising demand. Carpet wool prices were lower, reflecting a decrease in demand and a lower level of imports because of competition from synthetic fibers.

United States imports of wool products continued to supplement domestically manufactured wool products at a rising rate, but it was expected that international trade negotiations would attempt to stem this increase.

Retail supplies of easy-care all-wool products, including permanently creased slacks, permanently pleated skirts, machine-washable and -dryable blankets and sweaters, and permanently moth-proofed products, increased steadily.

WORLD HEALTH ORGANIZATION

The World Health Organization (WHO), an agency of the United Nations, aims at the attainment by all peoples of the highest possible level of health.

Membership and Assembly.—The membership of WHO increased to 117 states in 1962. Tanganyika, an associate member, became a full member after having attained independence. The Mongolian People's Republic, Western Samoa, and Algeria joined as full members, and Uganda and Jamaica as associate members. Ruanda-Urundi, an associate member, became two independent states, Rwanda and Burundi, both of which were admitted to full membership.

The Fifteenth World Health Assembly met in Geneva, Switzerland, in May and adopted a budget of nearly $30 million for 1963. On May 24 in Geneva, the president of the Assembly, Sergei V. Kurashov of the USSR, laid the foundation stone of the new WHO headquarters building.

World Health Day was observed in many countries on April 7, 1962, with the theme, "Preserve sight, prevent blindness." By conservative estimate, the world has 10 million blind persons, of whom 650,000 are children. As M. G. Candau, director-general of WHO, pointed out, over half the world's blindness is preventable.

Control of Diseases.—In the worldwide malaria-eradication campaign, outstanding advances were achieved in many countries—for example in India, where areas inhabited by over 148 million people entered the consolidation phase in which house-to-house insecticide spraying has been stopped and the emphasis is on investigating every case of fever. To win support for malaria eradication, a philatelic campaign was launched by WHO in which some 100 postal administrations took part under the slogan "The world united against malaria."

In many countries, tuberculosis is recognized as the greatest public health hazard. In internationally assisted campaigns against this disease, 345 million persons were tuberculin-tested and 130 million were given a preventive vaccination of BCG between 1951 and 1961 in 41 countries. In 1962, some 25 countries with a combined population of about 750 million received WHO assistance for their control activities.

Notifications of quarantinable diseases for 1961 were well above the figures for 1960 for smallpox, plague, cholera, and yellow fever, but comparison with earlier years shows a marked decline in these diseases. For smallpox eradication, WHO continued to provide assistance and advice to a great many countries. Cholera research was stepped up following the outbreaks of El Tor cholera in 1961.

Research and Education.—Cancer research received much attention, particularly the epidemiological approach to the study of lung cancer. WHO sponsored studies of large samples of the population in Ireland, for example.

In cardiovascular diseases, the discovery of the causes of high blood pressure, ischemic heart disease, and other conditions continued to receive the main emphasis. WHO's mental health program was increasingly focused on incorporating mental health activities within the framework of public health services.

WHO assistance was continued in the Republic of the Congo (Léopoldville). With nearly 200 staff members in the country, this became the largest and most comprehensive health operation ever carried out by WHO in a single country. The professional Congolese staff being trained are starting to fill the ranks of their own health service. At a ceremony in Geneva on Oct. 18, 1962, the first five male nurses from the Congo to qualify as laboratory technicians were handed their diplomas.

WRESTLING. See SPORTS, GAMES, AND SHOWS.

WYOMING

A Western state of the United States, Wyoming ranks 9th among the states in area (land, 97,411 square miles; inland water, 503) and 48th in population (365,000 on July 1, 1962, a 10.7% increase from the 1960 census figure of 330,066). Urban places with populations above 5,000 in 1960:

Casper	38,930	Riverton	6,845
Cheyenne (*capital*)	43,505	Rock Springs	10,371
Laramie	17,520	Sheridan	11,651
Rawlins	8,968	Worland	5,806

Government.—Chief executive and judicial officers in 1962 included Jack R. Gage, acting governor and secretary of state; C. J. Rogers, treasurer (died, May 18); Mrs. Minnie A. Mitchell, auditor; Norman B. Gray, attorney general; Velma Linford, superintendent of public instruction; and Fred H. Blume, chief justice of the 4-member Supreme Court.

The Wyoming Legislature, which convenes in odd-numbered years, comprised 17 Republicans and 10 Democrats in the Senate in 1962 and 35 Republicans and 21 Democrats in the House of Representatives.

Finance.—In the 1962 fiscal year, revenue of $120,846,262 included $44,000,000 from state taxes. Chief tax yields were the 2% general sales tax ($12,413,000), motor fuel taxes ($8,932,000), and licensing ($14,557,000). Spending of $111,347,982 included $21,809,228 for education, $5,275,042 for health, welfare, and safety, and $46,005,960 for highways.

Education.—In the fall of 1962, public elementary schools staffed by 2,153 teachers enrolled 50,763 pupils; secondary schools with 1,766 teachers enrolled 32,274; and parochial schools (1961–62) with 126 teachers enrolled 3,451. College enrollment (fall 1962) totaled 7,547 in 5 junior colleges and the University of Wyoming.

Estimated public school spending in the 1961–62 school year totaled $46,450,000, including current expenditures of $35,750,000 ($475 per pupil) and capital outlays of $9,500,000. Revenue of $45.6 million was drawn chiefly from state funds ($16.6 million) and local districts ($20 million). Teachers' salaries averaged $5,252 (high school, $5,550; elementary, $5,110). Actual spending for higher education (1961 fiscal year) totaled $13,008,000.

Public Assistance.—In the 1962 fiscal year, public assistance payments to a monthly average of 7,059 persons totaled $4,518,209. This amount included $2,218,177 for the aged and $1,237,500 for dependent children.

Transportation and Communications.—With 404 miles of highway construction and reconstruction completed in 1961, *highways and roads* on Jan. 1, 1962, totaled 60,139 miles (7,001 surfaced). These served 240,629 *motor vehicles* (as registered on Jan. 1, 1962), including 141,567 automobiles. Operating in the state were (1961) 6 *railroads* (using 3,171 line miles of track); (1962) 2 regularly scheduled *airlines;* and 36 commercial and municipal *airports and airfields.*

Communications media included (1961) 24 AM *radio stations;* 3 *television stations;* (1962) 10 daily *newspapers* (circulation, 76,059) and 30 other newspapers (53,603); and (Jan. 1, 1962) 43,400 business and 96,600 residential *telephones.*

Labor Force.—The state's labor force on June 30, 1962, included 26,000 agricultural workers. Nonagricultural employment totaled 118,000, compared with 115,000 a year earlier and an average of 99,800 for the 12 intervening months. Of nonfarm employees, 24.6% were in government services, 21% in trade, and 12.2% in transportation, communication, and other utilities. Unemployment on June 30, 1962, stood at 7,258, compared with 7,465 for the previous June 30.

Manufacturing.—Manufacturing employed an average of 8,485 workers in 1962 and provided a payroll of $48,263,288. In 1960 workers numbered 6,992, including 5,021 in production; the payroll amounted to $35,475,000; and adjusted value added by manufacture totaled $72,662,000.

The two leading industries in 1960 were petroleum and coal products (2,318 workers who received $15,214,000 in wages and added $37,369,000 in adjusted value by manufacture) and food and kindred products (1,492; $5,911,000; $14,753,000).

Mining.—In 1961, Wyoming ranked 10th among the states in the value of its mineral output, with 2.58% of the national total. Mineral fuels (of which petroleum provided 76%) accounted for 86% of the total value; nonmetals, 7%; and metals, 7%. Wyoming was first in output of sodium carbonate, second in uranium, third in sodium sulfate and vermiculite, and fourth in vanadium.

WYOMING MINERAL PRODUCTION, 1961
(In short tons, except as noted)

Mineral	Quantity	Value
Clays[1]	859,000	$ 10,301,000
Coal	2,529,000	8,573,000
Iron ore, usable (long tons)	...[2]	...[2]
Natural gas (million cu. ft.)	194,674	24,334,000
Natural gasoline (1,000 gal.)	76,349	4,705,000
Petroleum (1,000 bbl.)	142,589[3]	356,473,000[3]
Petroleum gases (1,000 gal.)	132,831	5,451,000
Phosphate rock (long tons)	...[2]	...[2]
Sand and gravel	6,669,000	5,356,000
Stone	2,594,000	3,315,000
Uranium ore	1,521,064	28,218,000
Other minerals	...	21,151,000
Total	...	$466,983,000[4]

[1] Excludes certain clays, value of which is included in "Other minerals." [2] Figure withheld to protect individual company's confidential data. [3] Preliminary. [4] Total adjusted to avoid duplication in the value of clays and stone. (Source: U.S. Bureau of Mines.)

Agriculture.—Cash farm income for the first nine months of 1962 (excluding government payments) totaled $89,724,000, compared with $85,764,000 for the corresponding period of 1961. For the full year 1961, income comprised $118,920,000 from livestock, $30,438,000 from crops, and $10,182,000 in government payments. Principal income sources in 1961 were cattle, $86,007,000, and sheep, $14,292,000.

The state's 10,000 farms in 1959 had an acreage of 36,200,000 (1,679,000 in harvested cropland). Livestock on farms on Jan. 1, 1962, included 1,126,000 cattle and 2,220,000 sheep.

WYOMING CROP STATISTICS

Crop (and unit of production)	Average 1951–60	1961	Est. 1962
Barley (1,000 bu.)	3,435	3,399	4,144
Beans, dry edible (1,000 bags)	833	930	602
Hay (1,000 tons)	1,370	1,406	1,563
Sugar beets (1,000 short tons)	518	706	614
Wheat (1,000 bu.)	5,911	4,908	4,551

(Source: U.S. Department of Agriculture.)

Events, 1962.—The efficient machine of the state Republican Party won a sweeping victory in the November 6 elections. In the U.S. Senate race, former Gov. Milward L. Simpson defeated incumbent Joseph J. Hickey, Democrat, by 69,043 votes to 50,329. For the state's lone seat in the U.S. House of Representatives, incumbent Republican William Henry Harrison, a grandson of President Benjamin Harrison, easily defeated Louis A. Mankus.

The Republicans won all five of the elective executive positions in the state government. In the race for the governorship, Clifford P. Hansen, Jackson cattleman, bested Acting Gov. Jack R. Gage; Mrs. Thyra Thomson was elected secretary of state over Frank L. Bowron; Mrs. Minnie A. Mitchell, incumbent auditor, defeated John E. Purcell; Everett T. Copenhaver won the treasurer's office from Robert Adams; and Cecil M. Shaw, in a very close contest, defeated the incumbent Velma Linford for state superintendent of public instruction.

In the contest for the Legislature, Republicans retained control of the Senate, 16 seats to 11, and of the House of Representatives, 37 to 19.

In general, cattlemen, sheepmen, and farmers prospered as a result of good precipitation in spring and summer. An unusually dry, warm fall favored crop harvesting and permitted full use of pasturage by livestock.

Production of raw materials flourished. Crude oil production exceeded 140 million barrels, as in 1961. The Stauffer Chemical Company began production at its new $10 million trona mine and soda ash refinery 20 miles northwest of Green River. The U.S. Steel Corporation began shipping iron ore pellets from its $60 million mine and mill in South Pass to its Columbia-Geneva division steel mill at Provo, Utah.

The tourist business was good, owing largely to record numbers of visitors to Yellowstone and Grand Teton national parks.

The federal government announced plans to make Warren Air Force Base, Cheyenne, the center of 200 Minuteman missile sites, to be constructed in the next three years in southeastern Wyoming, northeastern Colorado, and western Nebraska. Work on the first site east of Cheyenne began in December. Total cost of the 200 sites is expected to exceed $150 million.

Former U.S. Senators Frank A. Barrett, Republican, and Joseph C. O'Mahoney, Democrat, died during the year (Barrett on May 30 and O'Mahoney on December 1).

YEMEN—Confident of returning the imam to power, Yemeni royalist troops undergo training in November.

LONDON DAILY EXPRESS

X-RAY

The year 1962 was particularly significant for X-ray science as the 50th anniversary of one of the crucial and fruitful discoveries in history—the experimental proof by the German physicist, Max von Laue, of the diffraction of X-rays by crystals. This clarified the fundamental natures of the radiation and of the crystalline state, and opened the door to spectrometric analysis of elemental composition and diffractometric analysis of crystal structures. The discovery was commemorated in an international celebration at Munich in July 1962.

A new encyclopedia[1] devoted to radiation contains articles by nearly 300 radiation specialists from all over the world, with information on such significant advances in X-ray science as those related below.

Radiation Research.—The sun is known as one source of X-rays. In June 1962, X-rays from two cosmic sources in interstellar space were detected for the first time by the instruments on an Aerobee sounding rocket. Such X-rays may have a relationship with electrons in the Van Allen radiation belt. (See also ASTRONOMY; ATMOSPHERE RESEARCH.)

Flash radiography and cineradiography have been improved with field emission tubes. Each multiple-pulsed tube produces intensities of 10^9 roentgens per second and enables motion pictures to be taken at a rate of 16,000 frames per second. Such motion pictures demonstrate the distortion and displacement of the internal organs of animals moving under accelerations of 30 G's (gravities). Astronauts going into or out of orbit may experience similar, though less pronounced, effects.

Great progress has been made in the design of diffraction equipment to operate at very high and low temperatures for study of phase transformations, stability, and reactions of crystalline materials under conditions like those met by satellites in space. Patterns with changing temperature are continuously recorded on moving film.

The skilled experimental manipulation by Burton L. Henke and his associates at Pomona College of extremely soft X-rays up to 45 angstroms in wavelength in such processes as microscopy and spectrometry was outstanding.

Electric Data Processing and Control.—Computers are now widely used for processing all kinds of X-ray data, derived from programmed automatic spectrometers, diffractometers, and other radiation instruments. On-stream process control by fluorescence spectrometry has become established practice in the cement industry for continuous analysis of the calcium, aluminum, silicon, magnesium, and iron content, and for control of the zinc coating of sheet metal.

Radiation Detection and Protection.—Dosimeters in many new designs based on new physical and chemical changes appeared under the impetus to provide more sensitive detection and measurement of radioactive fallout.

J. F. Thomson gives an impressive account[2] of intensive tests of a large number of chemical compounds as potential radiation protectants, such as 2-aminoethylisothiouronium, known as AET. The prospect of a protective drug is generally discouraging, however, because of toxicity. This emphasizes more than ever before the vast superiority of avoidance of exposure by shielding over any kind of pre- or post-irradiation therapy. The U.S. Army is licensing architects specially trained in the design of efficient shielding structures.

YEMEN

An independent state in southwestern Arabia, Yemen is bounded by Saudi Arabia, Aden Protectorate (parts of which have joined to form the Federation of South Arabia, a union which Yemen does not recognize), and the Red Sea. The eastern frontier, facing the Rub al-Khali (Empty Quarter) desert, has never been delineated, and Yemen lays claim to parts of Aden. The state has an estimated area of 75,000 square miles, and a population of from 4.5 million to 5 million. About 50% of the population belongs to the Zaydi sect of Islam, the leader of which has been the traditional ruler of the country for several centuries; the remainder comprises Ismailis (followers of the Aga Khan) and orthodox Shāfi'ite Muslims. Formal capital cities are San'a (est. pop., 60,000) and Ta'izz (16,000).

Government.—Until his death on Sept. 19, 1962, the ruler was Imam Saif al-Islam Ahmad (acceded in 1948). He was an absolute monarch and the spiritual head of the Zaydi sect of Muslims. He had several councils to advise and assist him, but their roles were largely nominal. Administratively, the country was divided into eight provinces, each with an appointed governor: San'a, Ta'izz, Hodeida, Hujjah, Huth, Ibb, Baida, and Sa'da. After the death of the imam, a revolution placed the country in a state of political uncertainty, with two governments contending for control—a revolutionary republican regime led by Brig. Abdullah al-Sallal, who was named president in October; and a royalist government led by the new imam and former crown prince, Saif al-Islam Muhammad al-Badr (see below, *Events, 1962*).

Finance.—The main currency is the Maria Theresa thaler (360 grains of fine silver), which is valued at about U.S.$0.70. There is a fractional currency called

AMERICANA MAP BY DONALD T. PITCHER; LONDON DAILY EXPRESS

(*Map*) After ruling for eight days, Yemen's imam was deposed on September 27 at the capital, San'a, and Republican rule was quickly established at Ta'izz and Hodeida. In November, royalists claimed control of Sa'da and other territories in the North. (*Right*) Troops of the Yemeni Army, which carried out the revolution, parade in front of the royal palace, at San'a.

buqshas (40 buqshas equal 1 thaler). With the aid of the United Arab Republic (UAR), a national bank with a capital of 10 million UAR pounds is being established by the republican regime.

Economy.—Agriculture is the occupation of about 90% of the population. The principal crops are dhurra (a kind of sorghum), wheat, barley, corn, coffee (mocha), cotton, tobacco, fruits, alfalfa, indigo, and qat (*Catha edulis*). Coffee, cotton, hides, skins, and qat are the chief exports. Most trade passes through Aden; trade statistics are not available.

Little industry exists, and mineral resources remain largely unexploited. In 1961 a new port was constructed at Hodeida on the Red Sea with Soviet-bloc technical assistance. A 145-mile highway linking Hodeida with San'a was completed in 1962 with the help of Communist China. A road between San'a and Ta'izz was being built under the United States Point Four Program.

Events, 1962.—Imam Saif al-Islam Ahmad died at the age of 71 on Sept. 19, 1962, after a long illness. He was succeeded immediately by his son, who became Imam Saif al-Islam Muhammad al-Badr. As crown prince, the latter had ruled for his father on several occasions and was known to have modern and liberal ideas. On ascending the throne, the new imam announced his intention to carry out essential reforms and to modernize the country's feudal social system.

On September 27, however, the Soviet-trained Yemeni Army under the leadership of Col. (later promoted to a brigadier) Abdullah al-Sallal, who had just been appointed chief of staff by the new imam, besieged and bombarded the ruler's residence in San'a and claimed to have killed the young imam. Ten high-ranking government officials were subsequently executed by the revolutionaries. A ruling national defense council was formed and the establishment of a Republic of Yemen, with Colonel al-Sallal as acting head of state, was proclaimed.

Within a few days, however, reports began to circulate that Imam Muhammad al-Badr was alive and had escaped to an area near the Saudi Arabian frontier. The republican regime, nevertheless, was quickly recognized by the UAR, Syria, Algeria, Tunisia, and the Soviet Union and some other Communist countries. In early November the new government concluded a five-year military defense pact with Cairo.

On November 10 the imam reappeared publicly before a group of foreign correspondents at an undisclosed site in northeastern Yemen. He bitterly attacked President Gamal Abdel Nasser of the UAR for allegedly betraying him, and called on Yemeni tribesmen and faithful Zaydi Muslims to join him in repelling what he termed Egyptian aggression. With the imam back on the scene and apparently supported materially by Saudi Arabia and Jordan, the royalists cause took on new hope. Meanwhile, arms and troops from the UAR were flown and shipped in to support the republican forces. A full-fledged civil war soon developed between the two insurgents.

In late November, President Kennedy proposed

Central figures of the civil war in Yemen appear with their followers. (*Left*) After the eight-day rule of the new imam, power was seized by Premier Abdullah al-Sallal, shown here with Deputy Premier Abdul Rahman at his left, on October 9 at San'a. (*Right*) The deposed ruler, Imam Muhammad al-Badr (center), rallies his men in northwest Yemen on November 12.

WIDE WORLD; THE TIMES, LONDON

as a first step toward settlement of the conflict that UAR troops withdraw from the republican side and that Saudi Arabia and Jordan cease providing material support to the royalists. In mid-December the UAR reportedly agreed to withdraw its forces from Yemen. With the republican regime firmly established in San'a without the aid of foreign troops, the United States recognized it as the legitimate government of Yemen on December 19. Subsequently, the new government was given Yemen's seat at the United Nations.

YOUNG, Owen D.

U.S. industrialist: b. Van Hornesville, N.Y., Oct. 27, 1874; d. St. Augustine, Fla., July 11, 1962.

The son of an upstate New York farmer, Owen D. Young became the head of two of America's largest corporations, and a negotiator on international economic problems. He began his career as a lawyer, having studied at St. Lawrence University (B.A., 1894) and the Boston University Law School (LL.B., 1896). Following graduation, he became an attorney in Boston, where he also taught for a number of years as a part-time instructor in law at his alma mater.

In 1913 he moved to New York as a general counsel for the General Electric Company. Shortly thereafter he was put in charge of the company's legal department, with the rank of vice president. In 1922 he was named chairman of the board, a post he held until 1939, and again in 1942–44.

In 1919 the United States government asked Young to organize a company to consolidate American patents in the field of radio. It was feared that these patents—if they remained in the hands of their various owners—might be sold to foreign firms, thus weakening the position of the United States in the area of electronic communication. The company which Young formed was the Radio Corporation of America (RCA), with himself as board chairman. He continued in this capacity until 1929, after which he served as chairman of RCA's executive committee until 1933.

Young's most distinguished public service was his role in the settlement of the German reparations problem after World War I. In 1923–24 he was a member of the Expert Commission on German Finances and Reparations, which drew up the Dawes plan for the payment of German indemnities. Later he served as conciliator at the London Conference of Premiers, where his influence is credited with securing Allied acceptance of the Dawes plan. In 1929, as a result of his outstanding work in this area, Young was asked by the European governments to preside at a second reparations conference. The resulting Young plan, which modified the Dawes plan, is regarded as a masterpiece of economic diplomacy. His public service also included the chairmanship of several boards and committees concerned with business and labor problems.

YUGOSLAVIA

Largest of the Balkan countries in southeastern Europe, the Federal People's Republic of Yugoslavia has an area of 98,766 square miles and a population (Jan. 1, 1962 est.) of 18,725,000. Yugoslavia is a federation of six republics: Serbia, 7,629,113; Croatia, 4,148,122; Slovenia, 1,584,368; Bosnia-Hercegovina, 3,274,866; Macedonia, 1,404,833; and Montenegro, 471,433 (1961 census, provisional). Of its population, over 16 million persons are South Slavs (Serbs, Croats, Slovenes, Macedonians, and Montenegrins); national minorities (principally Albanians, Magyars, and Turks) comprise about 12% of the population. Belgrade (Beograd), the capital, has a population (1961 census, provisional) of 587,899. Among the larger cities (1962 population est.) are Zagreb, 485,000; Ljubljana, 157,400; Sarajevo, 179,800; and Skopje, 180,900.

President Tito of Yugoslavia was born Josip Broz (or Brozović) to a peasant family on May 25, 1892, in Kumrovec, Croatia. Trained as a locksmith, he worked at his trade and in German and Austrian metalworks until conscripted for the Austro-Hungarian Army shortly before World War I. He was captured by the Russians in 1915. Released during the Revolution of 1917, he fought on the side of the Bolsheviks in the Civil War and, on his return home in 1920, joined the Yugoslav Communist Party. While working in various industries he was active in the trade union movement, becoming secretary of the Zagreb metalworkers union in 1927. The next year he was arrested for his illegal Communist activities and was imprisoned until 1934 when, under the pseudonym of Tito, he was named to the Yugoslav Politburo and went to Moscow. He returned to Yugoslavia clandestinely in 1936, became party secretary the next year, and reorganized the national Communist leadership. When the Germans overran his country in 1941, he formed the Partisan guerrillas, which the Western allies began to aid in 1943 although the Yugoslav government-in-exile recognized the rival Četniks of Gen. Draža Mihajlović. That year he received the title of marshal and in March 1945 he took office as premier of the Yugoslav provisional government in liberated Belgrade. He retained the post when Yugoslavia was proclaimed a Federal People's Republic (November 1945) and has been president of Yugoslavia since the replacement in 1953 of a cabinet by a Federal Executive Council. After his expulsion from the Cominform in 1948 for deviating from the Stalinist party line, Tito's Communist government adopted a neutral policy in the cold war, achieving first a rapprochement with the West (as evidenced by American military aid) and in 1962 (since the Sino-Soviet rift) an understanding with the USSR.

Government.—Yugoslavia is a Communist-led state, but with distinct variations from the Soviet pattern. The center of political power is the League of Communists of Yugoslavia, with a membership of 1 million. The amended constitution of 1953 provides for a bicameral Federal People's Assembly comprising a 371-member Federal Council, elected in part by universal suffrage and in part by the councils of the six republics; and a Council of Producers, made up of delegates representing various sectors of the economy. The Federal Executive Council, headed by the president of the republic (Marshal Josip Broz Tito, installed for his third term on April 19, 1958), is the main policymaking organ. In addition to the federal and republican bodies, 75 districts and 759 communes represent the lower administrative organs; the commune is designed as the basic social-economic cell of society. The largest of the Communist-dominated "mass organizations" is the Socialist Alliance of Working People of Yugoslavia, with a membership of 6.5 million.

Education and Religion.—School enrollment, 1961–62: 3,565,949 (about 59% of the school-age population). Number of schools (with enrollments), 1960–61: 14,527 elementary (2,764,000); 229 secondary (80,000); 91 teacher-training (28,000); and 1,107 technical (229,086 in 1959–60). There were in 1960–61, 6 universities and 106 higher schools of learning. According to the 1953 census, the principal religions are Serbian Orthodox, 41.4%; Roman Catholic, 31.8%; and Muslim, 12.3%. In addition, Protestants totaled 0.9%; other religions, 1.3%; and 12.3% of the population was reportedly without religious affiliation.

Finance.—In 1961 total budget expenditure for the federal and republic governments amounted to 864 billion dinars, an increase of 161 billion dinars over 1960. On Jan. 1, 1962, the value of the commercial and tourist dinar was lowered from 600 to 750 to the U.S. dollar; the statistical rate was set at 300 dinars to the dollar.

Transportation and Communications.—Transport networks (miles, 1961): railways, 7,369; concrete, asphalt, and cobblestone roads, 4,793. Maritime fleet: 793,000 gross registered tons. National airline: Jugoslovenski Aerotransport (JAT). Other communications data for 1961: passenger cars, 78,085; trucks, 37,226; telephones, 276,487; radio subscribers, 1,674,000; television sets in use, about 100,000 (1962).

Economic indicators.—Gross national product, 1961 (called social product in Yugoslavia): 3,379 billion dinars, up 4% from 1960. Total industrial output rose by 7% in 1961, as against 15% in 1960. The volume of agricultural production in 1961 was 6% lower than in 1960 and 15% under that of 1959. Cost-of-living index (1960 = 100): 110 in 1961; 121 in January 1962. Number of unemployed persons: 173,002 (October 1959–March 1960 average).

Manufactures and Minerals.—Chief industrial products (metric tons, 1961): crude steel, 1,532,000 (up 6.2% from 1960); rolled products, 1,009,000 (up 3.8%); pig iron, 997,000 (up 2.6%); crude petroleum, 1,340,749 (up 42.8%); coal, 24,073,000 (up 6%); electric power, 9,924 million kw.-hr. (up 11.2%).

Agriculture.—Agriculture accounts for about 24% of the gross national product, and engages 56.7% of the total active population. Chief crops (thousands of metric tons, 1961): wheat, 3,170 (3,570 in 1960); rye, 191 (233); corn, 4,550 (6,160); sugar beets, 1,760 (2,290); hemp, 255 (201); potatoes, 2,680 (3,270).

Foreign Trade.—Total exports, 1961 (in millions of U.S. dollars): $556.2 (1.8% less than in 1960); imports, $901.1 (up 9%). Main exports (millions): foodstuffs, $168.0; semifinished products, $127.6; machinery and transport equipment, $92.8; raw materials, $83.1. Main imports (millions): industrial goods, $322.5; manufactures, $182.8; raw materials, $126.9; foodstuffs, $117.6. Chief customers (millions): East Europe, $168.1; European Economic Community (EEC), $143.4; European Free Trade Association (EFTA), $89.1; North America, $42.0. Main suppliers (millions): EEC, $322.7; North America, $184.1; eastern Europe, $168.2; EFTA, $110.5. On Nov. 13, 1962, Yugoslavia was accepted as a provisional member of the General Agreement on Tariffs and Trade (GATT).

Events, 1962.—The slowdown in the economic growth of Yugoslavia that began in 1961 continued throughout 1962. In spite of the objective of the Social Plan for 1962 to recover the ground lost (expecting industrial production to increase by 13% and agricultural output by 23%, and the balance of payments deficit to decline by $70 million), nothing worked as planned. Production in the first eight months of 1962 rose only 5%; the wheat crop equaled that of the preceding year's 3,100,000 tons (Yugoslavia's annual consumption requirements are about 4,000,000 tons); exports rose during the first six months of 1962 by only 3.7% above the comparable 1961 period instead of the planned 18.2%; and foreign short-term debts soared by August 1962 to about $1 billion.

These developments, as well as steadily rising prices and growing unemployment compelled Yugoslav authorities to take measures to halt the inflationary trend in the economy, to correct structural disproportions between consumption and production, and to stimulate exports. The alarm was sounded in a report delivered to Parliament on April 7 by Mijalko Todorović, vice president for economic affairs of the Federal Executive Council. On April 18 the Council announced a series of deflationary and restrictive measures: cutbacks in government spending, establishment of commissions to verify the new rules governing the distribution of net income of enterprises, and methods for doubling the basic turnover tax rate. A week later, controls on retail and wholesale trade were imposed, and on May 27 the Federal Executive Council was reshuffled in order to bring about a stronger administrative regulation of economic relations.

President Tito, in a bitter speech at Split on May 6, analyzed Yugoslavia's economic shortcomings and announced tighter controls to cope with the economic crisis. On June 30 the Federal People's Assembly enacted a law on foreign trade, which was based on the principle of unified commodity exchange, and which abandoned the system of individual foreign trade groupings. The reorganization of foreign trade transactions was expected to be achieved by the end of 1962. On July 19, new regulations restricted the remaining tiny area of private business by eliminating, within a year, private taxis and private trucking and hauling, and by barring private craftsmen from engaging in general production. In the middle of August, wages were cut about 10%, and there were indications that the reduction would be restored when the planned level of output and productivity was reached.

UPI

Yugoslavia's President Tito and his wife are welcomed in Moscow by Soviet Premier Khrushchev (right), December 4.

The most active element advocating new economic measures and adjustments was the League of Communists. Two meetings of its Central Committee (March 14–16 and July 21–22) dealt especially with economic and intra-League affairs. The first session stressed the necessity to "sharpen responsibility and discipline of the leading Communists from the top down." The strengthening of Communist control was also the main theme of Tito's speech in Split. At the second plenum of the Central Committee, Aleksandar Ranković, a vice president of the Tito government, warned that ideological deviations and "liberalist conceptions" would no longer be tolerated within the League. Another significant decision of the meeting was the abandonment of the current five-year plan (due to end in 1965), and the introduction of a transitional one-year plan for 1963 and a seven-year plan for 1964–70.

On March 13 the Federal Assembly approved an amnesty affecting about 150,000 political refugees living outside Yugoslavia, and announced that it would free nearly 1,000 prisoners. On April 7, Milovan Djilas was rearrested and accused of breaking parole for allowing his new book, *Conversations with Stalin*, to be published in New York. Djilas on May 14 was sentenced to five years in prison for allegedly making available to unauthorized persons confidential information he had learned while serving in an official capacity. To this was added the three years and eight months he had still to serve from a previous sentence of seven years imposed for having published *The New Class* (1957).

After several delays, the draft of a new Yugoslav constitution was presented to Parliament on September 20 by Vice President Edvard Kardelj, chairman of the drafting commission. The proposed constitution changed the country's formal name to the Federal Socialist Republic of Yugoslavia, and affirmed the ruling role of the League of Communists. Its most important provision called for the introduction of a cabinet and a premier. The constitutional draft will be the subject of public debate and will be returned to the parliament for adoption and possible amendment.

The introduction of austerity economic measures and the tightening of Communist control coincided with a new phase of Yugoslav-Soviet rapprochement. Soviet Foreign Minister Andrei A. Gromyko arrived in Belgrade on April 16 for a five-day official visit. A few days later, at the May

Day parade in Belgrade, 20 new Soviet-made T-54 tanks were displayed; they were the first such weapons obtained by Yugoslavia since the Tito-Stalin break in 1948. On July 6 a protocol on exchange of goods for a three-year period (1963–65) between Yugoslavia and the USSR was signed in Moscow. It provided for a $720 million volume of trade between the two countries ($80 million was the amount of trade exchanges in 1961). Leonid I. Brezhnev, the Soviet Union's titular chief of state, arrived in Belgrade on September 24 for a ten-day official visit. The Yugoslav press emphasized the cordiality he displayed for Yugoslavia. A Soviet-Yugoslav statement endorsed the Belgrade declaration signed by Nikita S. Khrushchev and Tito on June 2, 1955, that acknowledged the right of "separate roads to socialism" for Communist-ruled countries. Following the overall review of international problems, the Soviet-Yugoslav communiqué of Oct. 3, 1962, stressed the "identity or proximity of views" of the two governments.

President Tito led a large Yugoslav delegation which paid an unofficial visit to the Soviet Union from December 3 to 21. During his stay he had several long and friendly conversations with Khrushchev. On December 13, in an address to the Supreme Soviet of the USSR, Tito declared that Yugoslavia and the USSR held "identical" or "similar" viewpoints on world affairs.

An immediate repercussion of the Soviet-Yugoslav rapprochement was the betterment in relations between Yugoslavia and the other Communist states. The conspicuous exceptions were China and Albania, which continued their bitter attacks against Yugoslav "revisionism."

Yugoslav contacts with African, Asian, and Latin American nations continued. Between February 4 and 21, President Tito paid unofficial visits to the United Arab Republic and the Republic of the Sudan. In March, Avdo Humo, a member of the Federal Executive Council, paid official visits to Mali, Morocco, Tunisia, and Libya. In May, Koča Popović, secretary of state for foreign affairs, toured Brazil, Chile, Bolivia, and Mexico. Yugoslavia also took part in the 36-nation conference on economic problems in Cairo on July 9–18.

Yugoslav relations with the West were troubled by the criticism by Yugoslav leaders of the European Economic Community as a discriminatory obstacle to world trade. At the same time, however, Yugoslav-Italian relations were very friendly. Aleksandar Ranković paid an official visit to Italy on June 13–15. On August 11 the two countries signed a financial agreement in Rome, under which Yugoslavia obtained $70 million in Italian credits in the next four years.

Finally, in their relations with the United States, Yugoslav officials and press commented with displeasure on the action on June 6 of the U.S. Senate in cutting all aid to Yugoslavia because it was a Communist-dominated country. The decision was modified the next day, and President Kennedy was given discretionary power to supply Yugoslavia under certain conditions with agricultural products. The vote of the House of Representatives on October 4 to withdraw most-favored-nation trade treatment for Yugoslavia was termed by an official of Belgrade's government as "political and economic discrimination." However, the fact that the United States administration and the majority of the Congress favored divergent policies toward Yugoslavia was viewed optimistically by Yugoslav official circles. During his visit with President Kennedy on May 29, Koča Popović pleaded the case of Yugoslav "independence" in foreign policy.

In spite of the tensions in United States–Yugoslav relations, United States economic aid to Yugoslavia in 1962 amounted to $115.8 million. On July 11 the World Bank made a loan equivalent to $30 million for the Bajina Bašta hydroelectric project on the Drina River.

Senior Staff Member, The Hoover Institution, Stanford University.

YUKON TERRITORY

The Yukon Territory, located in the northwestern part of mainland Canada, is bounded on the north by the Arctic Ocean, on the east by the Northwest Territories, on the south by British Columbia, and on the west by Alaska. It has an area of 207,076 square miles and a population (1961 census) of 14,628. Whitehorse (pop., 5,031) is the capital.

Government.—The government of the Yukon Territory is administered by a commissioner (G. R. Cameron, appointed May 1, 1962). The legislature consists of an elected council of seven members with three-year terms, of whom three comprise an advisory committee on financial matters. The commissioner acts under instructions from the governor-in-council or from the federal minister of northern affairs and national resources. The territory is represented in the federal House of Commons by one member (Erik Nielsen, Conservative).

Finance.—Revenue for the fiscal year ending March 1962; $2,879,766; expenditures: $3,447,547.

Production.—Mining is the chief industry. Total mineral production in 1961 was valued at $12,987,000 (preliminary), including: silver, $6,672,022; gold, $2,401,946; lead, $1,792,197; zinc, $1,534,589; copper, $256,872; cadmium, $214,042; coal, $115,243. The tourist industry earned approximately $2 million during the 1962 season.

Education.—In the 1960–61 academic year, the territory's 17 public schools, 3 separate schools, and one residential school for Indian students had an enrollment of 2,393 students, with 105 teachers employed. A total of $768,798 was spent on education.

Transportation and Communications.—The main road artery in the territory is the all-weather Alaska Highway, running from Dawson Creek, B.C., to Fairbanks, Alaska. All-weather gravel highways connect Dawson City, Keno, Elsa, Carcross, and Mayo with the Alaska Highway, and there are also summer connections from Ross River, Dawson City, and Haines, Alaska. Whitehorse is connected to tidewater at Skagway, Alaska, by 110 miles of railroad. Connections are made at Skagway with the summer services of the Canadian Pacific and Canadian National steamships, and the year-round freight service of the White Pass & Yukon Route.

Canadian Pacific Airlines operates a daily service, except Sunday, from Vancouver and Edmonton to Whitehorse, and semiweekly mail and passenger services from Whitehorse to Mayo and Dawson City. Pan American World Airways operates a service into Whitehorse, with three stops per week during summer months, and one stop per week during winter months. Several independent air services offer charter flights out of Whitehorse, and there are companies providing the same service at Dawson, Mayo, and Watson Lake. Communities throughout the territory are connected by local telephone and telegraph services and by land line with the telephone systems in the provinces. The microwave system along the Alaska Highway went into operation in June 1961.

Events, 1962.—Two bridges over the Klondike River and one over the McQuesten River were completed. The Eagle Plain–Flat Creek Road was extended beyond Chapman Lake, and further work was carried out on the Watson Lake–Ross River road.

A huge iron discovery covering an area of over 146 square miles was staked in the Snake River area, northeast of Mayo. Preliminary figures suggest that this is one of the largest iron-ore bodies discovered anywhere in the world, with an estimated 20 billion tons.

With the advent of the Dawson City Gold Rush Festival, Dawson City was named a national historic site by the National Historic Sites Division of the Department of Northern Affairs and National Resources.

G. R. Cameron,
Commissioner, Yukon Territory.

ZANZIBAR

The British East African protectorate of Zanzibar consists of the islands of Zanzibar and Pemba, lying in the Indian Ocean off the east-central coast of Africa. Zanzibar (area, 640 square miles) is a coralline island situated 22.5 miles to the east of Tanganyika; Pemba (380 square miles) lies 25 miles northeast of Zanzibar. Mainland dominions of the sultan of Zanzibar form a protectorate of Kenya, and are leased by the sultan for a yearly rental of £10,000. The total population of Zanzibar Protectorate at the 1958 census was 299,111 (mid-1961 est., 315,000), including 228,815 Africans, 46,989 Arabs, 18,334 Asians, and 507 Europeans. The capital and chief seaport is Zanzibar (1958 pop., 57,923).

Government.—Sultan Seyyid Sir Abdulla bin Khalifa is the nominal ruler. The administration of the protectorate is conducted by the British resident, Sir George Mooring (appointed in 1959). He is assisted by an 8-member Executive Council and a 31-member Legislative Council, which includes 23 elected members. In the elections of June 1, 1961, the Nationalist Party and the Afro-Shirazi Party each won 10 elected seats, and the People's Party won 3 seats. A Nationalist-People's coalition cabinet was formed on June 5, 1961, with Muhammad Shamte Hamadi (People's Party) as chief minister.

Education.—Public school enrollment, 1961: 21,479 (about 20% of the school-age population). Number of public schools (with enrollments, 1961): 73 primary (21,479); 6 secondary (1,081). There were also 3 private primary and 4 private secondary schools, and several government teacher-training colleges. Higher education for students is provided at institutions in foreign countries.

Finance.—Actual revenue, fiscal year 1962: £2,732,217; expenditure, £3,386,535. In that year Zanzibar contributed £43,088 to services of the East African High Commission.

Transportation.—Roads on the island of Zanzibar aggregate 347 miles, of which 279 miles are bitumen-surfaced; roads on Pemba total 107 miles, of which 26 miles are bitumen-surfaced. There are no railways. Zanzibar is a port of call for many foreign steamship companies, and the government operates regular service to Pemba and the African mainland. Both islands have small airfields.

Production.—Zanzibar Protectorate provides about 80% of the world's annual clove supply and has the world's largest area under clove trees—some 80,000 acres containing more than 4 million trees. About five sixths of annual clove output is produced on Pemba. Clove exports, 1961: 8,402 metric tons (down 32% from 1960); exports of clove oil, 154 metric tons (up 1%). Exportable production of copra (metric tons, 1961): 7,391; coconuts, 3,660; coconut oil, 2,488; coir fiber, 4,697. Other crops include rice, cassava, sweet potatoes, chilies, tobacco, maize, and tropical fruits. Manufactures are chiefly coir fiber and rope, soap, jewelry, ivory and ebony ornaments, and metalware.

Foreign Trade.—Total exports, 1961: £4.40 million (down 22% from 1960); imports, 5.49 million (up 4%). About 95% of total export value was provided by cloves, clove oil, and coconut products. Imports consist chiefly of cotton goods, rice, grains, fuels, ivory, and foodstuffs. About 46% of the protectorate's total export value in 1961 went to the United Kingdom and Commonwealth countries; over half of the annual clove crop was shipped to Indonesia.

Events, 1962.—A constitutional conference, held in London from March 18 to April 7, failed to reach agreement on measures to implement internal self-government and eventual independence for Zanzibar. The conferees were unable to form an all-party government and to set a date for new elections. They agreed to introduce universal suffrage for all citizens 21 years of age and older, and to dispense with previous property and literacy qualifications for electors.

The failure of the conference was protested by all political groups in Zanzibar. The government on May 5 reported that it had uncovered a plot by the youth wing of the Nationalist Party to damage public property as a means of exerting pressure on the government. As a result, Resident Sir George Mooring ordered the arrest of Abdul Rahman Muhammad Babu, general secretary of the Nationalist Party, and nine other Nationalist leaders. Babu was sentenced on June 20 to 15 months' imprisonment on charges that he had published seditious material in his party's newspaper.

W. R. F.

ZINC

According to data compiled by the U.S. Bureau of Mines, world output of primary zinc totaled 3,550,000 short tons in 1961, compared with 3,280,000 tons in 1960. Of these totals, the United States supplied 24% in each case.

United States mine production of recoverable zinc in 1961 increased by 7%, or to 464,390 short tons, compared with 435,427 tons in 1960. The Western states (including Alaska) supplied 48% of the output; states east of the Mississippi River, 50%; and West-Central states, 2%. In 1961 the ranking of the states in recoverable zinc output was: Tennessee, New York, Idaho, Arizona, and Colorado. Output of primary metal increased to 846,795 tons in 1961 from 799,516 tons in 1960. Of the 1961 tonnage, 419,206 tons were of domestic origin and 427,589 tons were from imported ore. The grand total, including redistilled secondary zinc and production of zinc used directly in alloying operations, increased from 868,247 tons in 1960 to 902,032 tons in 1961. Consumption of 931,213 tons of slab zinc in 1961 represented a rise from the 877,844 tons consumed in 1960.

Imports of zinc in 1961 totaled 543,262 tons, a decline of 6% from 577,922 tons in 1960. Imports of ore (zinc content) totaled 415,700 tons, and of slab zinc, 127,562 tons. Mexico, Canada, Peru, and Guatemala supplied most of the zinc imported in ores and concentrates; and Canada, Belgium-Luxembourg, Republic of the Congo (Léopoldville), and Mexico supplied most of the metal imported. Exports of zinc metal decreased 33%, or from 75,144 tons in 1960 to 50,055 tons in 1961. The United Kingdom, India, Japan, and Brazil received most of the 1961 exports.

The International Lead and Zinc Study Group met in 1961, but no specific action was taken to curtail further increases in zinc stocks. A special group was established to study the causes and possible solution of the instability in lead-zinc markets. United States government stockpiles contained 1,580,000 tons of zinc. No additions or withdrawals were made during 1961.

In the first nine months of 1962, recoverable zinc output in the United States was 370,331 tons, compared with 352,215 tons in 1961.

(See MINERAL PRODUCTION for table showing output of major producing countries.)

ZOOLOGY

Progress in zoology during 1962 included investigations of water balance in amphibians, hearing in kangaroo rats, and new information concerning natural habits of the tuatara.

Water Balance in Amphibians.—The class Amphibia (frog-like and salamander-like vertebrates) is essentially a fresh-water group which shows varying degrees of terrestrial behavior. In general, it is believed that amphibians are unable to survive prolonged immersion in water containing more than 1% salt (coastal sea water usually contains more than 3% salt). However, it has been found that adults of the crab-eating frog of Southeast Asia, *Rana cancrivora*, can tolerate salinities from fresh water to water containing 2.8% salt.[1,2] Tadpoles of this species can survive salinities over

[1] Gordon, M. S., Schmidt-Nielsen, K., and Kelly, H., *The Journal of Experimental Biology*, 32:659–678, 1961.
[2] Schmidt-Nielsen, K., and Lee, P., *The Journal of Experimental Biology*, 39:167–177.

a range from fresh water to 3.9% salt (about 120% of the salinity of most coastal sea water).

The blood of *Rana cancrivora* is always more concentrated than, or hypertonic to, the medium in which it is immersed, regardless of the concentration. However, 60% of the increased blood concentration over fresh-water levels is due to the retention of urea. The remaining 40% is due to sodium chloride. Uremia in this frog is believed to be an important part of the mechanism which permits it to tolerate salinities three times higher than most other amphibians; high urea content in the blood precludes toxic levels of inorganic salt from being attained.

On the other hand, *Rana cancrivora* has had to become adapted to the high levels of urea in its blood, for such concentrations as those found in this species when it is immersed in 80% sea water (as high as 2.9% urea) would be highly toxic to other animals and is known among other things to destroy certain enzymes and affect the ability of hemoglobin to combine with oxygen. Yet this mechanism is not unique to *Rana cancrivora,* for it has long been known that the blood of elasmobranch fishes (sharks and rays) contains extremely high concentrations of urea, a phenomenon which is believed to have permitted this group to reinvade the sea from a fresh-water environment.

The Great Plains toad, *Bufo cognatus,* is an extremely terrestrial amphibian which inhabits the semiarid central and southwestern United States. Many of this species depend on intermittent summer rainstorms as their exclusive source of water. The ability to store large quantities of water obviously would assist their survival during periods of drought, and would allow them to hunt for food relatively great distances from their water sources. Such a supply of water has been demonstrated to be present in the urinary bladder,[3] in which up to 30% of body weight can be stored. When the toad is desiccated, the bladder water is resorbed and distributed to the vascular system. This permits the concentration of the blood and lymph to remain relatively constant. Toads dehydrated after their bladders have been emptied of water will demonstrate rapid increases in the blood and lymph concentrations.

Middle Ears of Kangaroo Rats.—The skulls of kangaroo rats are characterized by extremely large mastoid bullae, a pair of prominent swellings of thin bone on either side of the skull containing the largest part of the middle-ear cavities. The functional significance of these bullae has been unknown, but it has been postulated that they are associated with the rats' ricocheting locomotion. Some investigators, having noted extreme acuity of hearing among kangaroo rats, have suggested an auditory function for the enlarged middle-ear cavities.

Both possibilities have now been investigated in *Dipodomys merriami* and *Dipodomys spectabilis.*[4] It was demonstrated that reduction of the volume of the middle ear by the addition of clay, dental cement, or paraffin had no discernible effect on the animals' locomotion. However, such an operation does alter the electrical activity of the inner ear (cochlear microphonics). The electrical activity of the inner ear was recorded for frequencies of sound from 100 to 12,000 cycles per second. Thus, it was shown in both species that the sensitivity of the inner ear is greatest between the frequencies of 1,000 and 3,000, with extreme sensitivity at 1,400, 1,800–2,200, and 2,600 cycles per second. While reducing the volume of the middle-ear cavities does not change the frequency of the peaks of sensitivity, it does reduce the amplitude of the electrical activity and probably the acuity of hearing at those frequencies. Experiments carried out at night with owls and rattlesnakes indicated that normal kangaroo rats can avoid predation whereas operated animals with reduced middle-ear volumes cannot. Sounds produced during an owl's flight and during the strike of a rattlesnake contain frequencies to which normal kangaroo rats are most sensitive.

Habits of the Tuatara.—The tuatara, *Sphenodon punctatum,* is the sole living representative of the reptilian order Rhynchocephalia. While the tuatara superficially resembles modern lizards, it differs dramatically from them in the structure of the skull. Furthermore, *Sphenodon* differs from all modern reptiles by the absence of a copulatory organ in the male. The fossil record demonstrates that other members of the order Rhynchocephalia had a worldwide distribution during the Triassic period, or approximately 200 million years ago. Yet today's sole species is limited to about 20 islets around the coast of New Zealand. It is interesting that the modern tuatara shows little change in skeletal structure from fossil Triassic members of this order found in the Northern Hemisphere.

Only recently a detailed investigation has been directed to the tuatara's habits in nature.[5] Growth-rate studies in the field and on captive specimens indicate that probably 20 years or more are required before the breeding age is attained. Also, it is estimated that many large, wild animals are more than a century old. Tuataras feed on many organisms living in and on the ground, from earthworms to bird eggs and even young birds. Most of the tuatara islands have poor water supplies. Therefore, *Sphenodon* may survive for weeks on water found only in food or in dew. Tuataras are highly nocturnal and forage at times when the temperature is as low as 7°C., an unusually low ambient temperature for an active poikilotherm (cold-blooded organism).

The undisturbed areas of the tuatara islands are characterized by low coastal forest or scrub cover. Recently modified areas are grasslands. The ground under the forest cover or of the grassland is marked by burrows of one or more species of petrel. Other types of birds are common on the islands such as penguins, gulls, and terns. Although tuataras frequently inhabit or even share petrel burrows, they can and do construct burrows independently of birds. The modern *Sphenodon punctatus* has changed little from its Triassic ancestors in skeletal structure, yet those ancestors could not have lived in a coastal forest, marine-bird association as does today's form, for no birds and only a few modern flowering plants then existed.

NECROLOGY . . . 1962

Prominent Persons Who Died During the Year

Following is a selected list of more than five hundred of the most prominent persons who died in 1962. Separate biographical articles on those individuals whose names are preceded by an asterisk (*) may be found under their own headings in this volume.

Adler, Elmer (77), U.S. authority on graphic arts; formerly curator of graphic arts, Princeton University; founded (1958) museum of fine books in San Juan, Puerto Rico: d. Santurce, Puerto Rico, Jan. 11.

Adler, Polly (62), U.S. businesswoman; published *A House Is Not a Home* (1953): d. Hollywood, Calif., June 9.

Ahmad, Saif al-Islam (71), imam of Yemen (from 1948): d. (announced) Sana, Yemen, Sept. 19.

Aitchison, Clyde B. (86), U.S. government official; member of Interstate Commerce Commission, 1917–52: d. Washington, D.C., Jan. 16.

Aldington, Richard (70), English author; wrote *The Death of a Hero* (1929) and other novels, and many biographies, including *Lawrence of Arabia* (1955): d. Léré, France, July 28.

Alldredge, J. Haden (75), U.S. government official; member (and twice chairman) of Interstate Commerce Commission, 1939–55: d. Montgomery, Ala., Dec. 5.

Allen, Vivian B. (age undisclosed), U.S. philanthropist; donated $3 million to build Vivian Beaumont Theater (to open in 1964) in Lincoln Center for the Performing Arts, New York: d. New York, N.Y., Oct. 10.

Amin, Sidi Mohammed al- (81), last bey of Tunis (1943–57); was deposed on July 25, 1957, when Tunisia became independent republic: d. Tunis, Tunisia, Oct. 1.

Andersen, Alsing (69), Danish public official; was defense minister (1935–40), held other cabinet posts, and was chairman of the UN Special Committee on Hungary (1957): d. Copenhagen, Denmark, Dec. 5.

Anderson, Victor E. (60), U.S. businessman and public official; Republican governor of Nebraska, 1955–59: d. Lincoln, Nebr., Aug. 15.

Antonov, Gen. Aleksei I. (65), Soviet army officer: b. Grodno, Russia, Sept. 15, 1896; d. Moscow, USSR, June 18, 1962. Commanded Soviet armies in the Caucasus and served as first deputy chief of the general staff during World War II. As chief of the general staff in 1945, acted as Stalin's military adviser at the Yalta and Potsdam conferences. Served as chief of staff of the Warsaw Pact armed forces since creation of the joint command in May 1955.

Arden, Victor (69), U.S. pianist and orchestra leader; appeared on popular radio programs in 1930's and 1940's: d. New York, N.Y., July 31.

Arias, Harmodio (76), Panamanian publisher and public official; was president of Panama in 1932–36: d. (aboard airliner bound for Panama) Dec. 23.

Ashurst, Henry Fountain (87), former U.S. senator: b. Winnemucca, Nev., Sept. 13, 1874; d. Washington, D.C., May 31, 1962. Admitted to the Arizona bar in 1897, he shortly became prominent in Democratic territorial politics and was elected to the U.S. Senate in 1912 when Arizona was admitted to the Union as the 48th state. He served in the upper house until 1941, following his defeat in the primary election of the preceding year. From 1941 to 1943, he was a member of the Department of Justice's Board of Immigration Appeals.

Athenagoras (78), archbishop and exarch of Greek Orthodox Church in western and central Europe, from 1950; bishop of Boston, 1938–50: d. London, England, Oct. 15.

Austin, Warren Robinson (85), former U.S. senator and ambassador to the United Nations: b. Highgate, Vt., Nov. 12, 1877; d. Burlington, Vt., Dec. 25, 1962. A graduate of the University of Vermont, he was admitted to the state bar in 1902 and served as state attorney for Franklin County (1904–06). Elected to the U.S. Senate in 1931 (re-elected 1934 and 1940), he served as member of the Judiciary, Foreign Relations, and District of Columbia committees. Appointed permanent representative to the United Nations in 1947, he played a leading role in the Security Council and became one of the most eloquent spokesmen for the West. In his famous exchanges with Soviet delegate Jacob Malik, he castigated the Soviets for their attacks against United Nations action in Korea. He retired to Vermont in 1953.

Axtell, Silas B. (77), U.S. admiralty lawyer who co-founded (1912) International Seafarers Union, the first seamen's union: d. Chevy Chase, Md., Apr. 29.

Ayatollah Kashani (86?), Iranian religious and political leader; an anti-British nationalist, he supported Premier Mossadegh in early 1950's: d. Teheran, Iran, Mar. 14.

Bach, Theodore F. (61), U.S. physician and authority on rheumatic conditions: d. Philadelphia, Pa., Jan. 18.

Bacon, Walter W. (83), U.S. public official: b. New Castle, Del., Jan. 20, 1879; d. Wilmington, Del., March 18, 1962. He was an official of the Buick Motor Company, Flint, Mich., until his retirement in 1930, after which he resided in Wilmington. Served as mayor of that city from 1935 until his election as governor of Delaware in 1940 (re-elected 1944).

Bannow, Rudolph F. (65), U.S. businessman; president of National Association of Manufacturers in 1960: d. Easton, Conn., June 23.

Barrett, Frank A. (69), former governor of Wyoming and U.S. senator: b. Omaha, Nebr., Nov. 10, 1892; d. Cheyenne, Wyo., May 30, 1962. Admitted to the Wyoming bar in 1919, following study at Creighton University (B.A., 1913; LL.B., 1916). A Republican, he served as state senator (1933–35), U.S. congressman (1943–50), governor of Wyoming (1950–52), and U.S. senator (1952–59).

Bartholomew, Harry G. (77), English journalist; as chairman of *The Daily Mirror* (to 1951), developed it into world's largest selling newspaper: d. Camberley, England, May 4.

Barton, Betsey A. (45), U.S. author; wrote *And Now to Live Again* (1944) and other books dealing with physical handicaps: d. (accidental drowning) Los Angeles, Calif., Dec. 12.

Barton, James E. (71), U.S. actor; appeared in *Tobacco Road* (1934–39) and other Broadway plays: d. Mineola, N.Y., Feb. 19.

Beach, Sylvia Woodbridge (75), U.S. author and publisher: b. Baltimore, Md., 1887; d. Paris, France, Oct. 4, 1962. She was a friend and counselor of James Joyce and many other famous writers who frequented her Paris bookstore, Shakespeare and Co. (1919–41). Under that imprint she published in 1922 the first complete text of Joyce's *Ulysses*, banned from the United States as obscene until 1933. Her autobiography, *Shakespeare and Company*, was published in 1959.

Beardslee, John W., Jr., U.S. theologian; president of New Brunswick Theological Seminary, 1935–47, and of General Synod of the Reformed Church in America, 1947–48: d. New Brunswick, N.J., May 10.

Beauchamp, Wilbur L. (70), U.S. educator; taught at University of Chicago, 1915–56; studied teaching methods and wrote science textbooks: d. Chicago, Ill., Feb. 26.

*Beebe, (Charles) William (84), U.S. naturalist, author, and explorer: d. near Arima, Trinidad, June 4.

Bell, Leslie (55), Canadian musical director; founded (1939) Leslie Bell Singers, well-known all-girl choir: d. Toronto, Ont., Jan. 19.

Bell, Rex (original name, George Beldam) (58), U.S. politician and former motion picture actor: b. Chicago, Ill., Oct. 16, 1903; d. Las Vegas, Nev., July 4, 1962. A popular Western film star and owner of a 600,000-acre ranch in Nevada, he was elected Republican lieutenant governor of Nevada in 1954 (re-elected, 1958) and was a candidate for governor at the time of his death. He was the husband of actress Clara Bow, to whom he was married in 1931.

Bellinger, Vice Adm. Patrick N. L. (76), U.S. naval officer and pioneer aviator; commanded Atlantic Fleet Air Force in World War II: d. Clifton Forge, Va., May 29.

Belmonte (y García), Juan (69), Spanish bullfighter: b. Seville, Spain, April 14, 1892; d. (suicide) Utrera, Spain, April 8, 1962. By working close to the bull, he revolutionized the art of bullfighting and was considered to be the greatest matador of his time, killing 1,650 bulls during his public career (1910–35). An autobiography, *Juan Belmonte, Killer of Bulls*, was published in English in 1937; also figured prominently in Ernest Hemingway's *Death in the Afternoon* (1932).

*Bemelmans, Ludwig (64), Austrian–U.S. painter and writer: d. New York, N.Y., Oct. 1.

Benét, Rosemary C. (65), U.S. poet and widow of Stephen Vincent Benét; d. New York, N.Y., Aug. 18.

Bennett, Lt. Gen. Henry G. (75), Australian army officer; commanded Australia's 8th Division in Malaya early in World War II: d. Sydney, Australia, Aug. 1.

Benoit, Pierre (75), French novelist; wrote *L'Atlantide* (1919) and other books: d. Ciboure, France, Mar. 3.

Bergler, Edmund (62), U.S. psychoanalyst who evolved theory that neurotic difficulties are caused by one basic neurosis; published *Conflict in Marriage* (1949) and many other books: d. New York, N.Y., Feb. 6.

Bestor, Paul (79), U.S. financier and government official; chairman of Federal Farm Loan Board, 1929–33: d. Montclair, N.J., June 25.

Birdwood, Lord Christopher B. (62), British army officer; wrote books on India: d. London, England, Jan. 5.

Birkett of Ulverston, 1st Baron (William Norman Birkett) (78), British lawyer: b. Ulverston, Lancashire, England, Sept. 6, 1883; d. London, England, Feb. 10, 1962. Attended Emmanuel College, Cambridge University, and was admitted to the bar, Inner Temple, in 1913 and appointed king's counsel in 1924. Became famous as a criminal court defense attorney (he lost only two verdicts in 20 famous murder trials) and as a civil advocate. Served as judge of the King's Bench Division of the High Court of Justice (1941–50), as lord justice of appeal (1950–57), and as a judge at the Nürnberg war crimes trials (1945–46). He also served as a member of Parliament (1923–24 and 1929–31); was knighted in 1941 and elevated to the peerage in 1958.

Bishop, Max (62), U.S. baseball player and coach; second baseman of Philadelphia Athletics' championship teams in 1929–31; coached U.S. Naval Academy baseball teams from 1938: d. Waynesboro, Pa., Feb. 25.

Blair, James T., Jr. (60), U.S. public official: b. Maysville, Mo., March 15, 1902; d. Jefferson City, Mo., July 12, 1962. Graduated with law degree from Cumberland University (1924) and entered Democratic politics, serving as city attorney (1925–29) and mayor (1947–49) of Jefferson City; member of the Missouri House of Representatives (1929–33); lieutenant governor of Missouri (1949–57); and governor (1957–61).

Blair, Col. William R. (87), U.S. Army officer who developed (1937) Army's first radar system: d. Fair Haven, N.J., Sept. 2.

Bliss, Robert W. (86), U.S. diplomat; ambassador to Argentina, 1927–33: d. Washington, D.C., Apr. 19.

°Bohr, Niels H. D. (77), Danish physicist: d. Copenhagen, Denmark, Nov. 18.

Bok, William Curtis (64), U.S. judge; was presiding judge of Court of Common Pleas No. 6 of Philadelphia County (1937–58) and justice of Pennsylvania Supreme Court (from 1958); wrote often-cited opinion defining obscenity in censorship case: d. Radnor, Pa., May 22.

Bond, Ford (57), U.S. radio and television announcer and producer; was well known for broadcasts of sports and special events: d. St. Croix, Virgin Islands, Aug. 15.

Borlenghi, Angel G. (58), Argentine political leader; was minister of interior (1946–55) and of justice (1954–55) in Perón regime: d. Rome, Italy, June 17.

Borzage, Frank (69), U.S. film director; won two Academy Awards (1927 and 1931) for directing *Seventh Heaven* and *Bad Girl:* d. Los Angeles, Calif., June 19.

Bowater, Sir Eric V. (67), English industrialist; headed (from 1929) Bowater Paper Corporation; was director-general of Ministry of Aircraft Production, 1939–45: d. West Horsley, Surrey, England, Aug. 30.

Bowman, John G. (85), U.S. educator; chancellor of University of Pittsburgh (1921–45); raised funds for 42-story Cathedral of Learning: d. Bedford, Pa., Dec. 2.

Bradley, John H. (63), U.S. geologist, geographer, and educator; discovered a fossil starfish (1931); published many textbooks: d. Escondido, Calif., Aug. 18.

Braithwaite, William S. B. (83), U.S. poet, literary critic, and educator; published many books of poetry and poetry anthologies: d. New York, N.Y., June 8.

Bramuglia, Juan Atilio (59), Argentine statesman: b. Chascomús, Argentina, Jan. 1, 1903; d. Buenos Aires, Argentina, Sept. 4, 1962. A specialist in labor law and a former union counsel, he served the Perón regime in various capacities, most importantly as foreign minister from 1946 to 1949. In 1948, when president of the U.N. Security Council, he won international prestige for his attempts to mediate the Berlin blockade dispute. He broke with Perón in 1949 but later founded the neo-Peronist Popular Union Party.

Branham, Sara E. (74), U.S. bacteriologist; formerly head of bacterial toxins section of Public Health Service; helped to develop cure for meningitis: d. Washington, D.C., Nov. 16.

Breckinridge, Aida de Acosta (80), U.S. philanthropist; founded (1945) and directed Eye-Bank for Sight Restoration. d. Bedford, N.Y., May 27.

Brennecke, Henry (69), U.S. educator and authority on German language; headed German department, New York University, 1937–58: d. Tuckahoe, N.Y., Apr. 29.

Britton, Edgar C. (70), U.S. chemist; synthesized nearly 300 new organic chemicals, including eight essential amino acids: d. Midland, Mich., July 31.

Britton, Jack (William J. Breslin) (74), U.S. boxer; held welterweight championship title in 1916–22: d. Miami, Fla., Mar. 27.

Brochado da Rocha, Francisco (52), Brazilian public official; served as temporary premier from July to September 1962: d. Pôrto Alegre, Brazil, Sept. 26.

Broniewski, Władysław (64), Polish Communist poet: d. Warsaw, Poland, Feb. 10.

Brown, Ernest (80), British member of Parliament (1923–24; 1927–45); minister of labor (1935–40) and of health (1941–43): d. London, England, Feb. 16.

Bruvic, Olav (49), Norwegian labor leader and public official; minister for social welfare (from 1961): d. Oslo, Norway, Dec. 30.

Buck, Solon J. (78), U.S. archivist and historian; as archivist of U.S. (1941–48), supervised microfilming of national records: d. Washington, D.C., May 25.

Budd, Ralph (82), U.S. railroad executive; president, Great Northern Railway, 1919–32, and Chicago, Burlington and Quincy Rail Road, 1932–49; introduced (1934) first diesel-powered streamliner in U.S.: d. Santa Barbara, Calif., Feb. 2.

Bunting, Russell W. (81), U.S. dentist; did research on tooth decay; dean of University of Michigan School of Dentistry, 1937–50: d. Ann Arbor, Mich., Nov. 22.

Burgess, Perry (75), U.S. authority on leprosy; president, Leonard Wood Memorial for the Eradication of Leprosy, 1930–58: d. Unionville, Ohio, Sept. 15.

Burke, Joseph A. (76), U.S. Roman Catholic prelate; bishop of Diocese of Buffalo, from 1952: d. Rome, Italy, Oct. 16.

Busbee, Juliana R. (85), U.S. artist; revived pottery industry in Jugtown, N.C.: d. there, Mar. 2.

Busoni, Rafaello (62), U.S. painter, illustrator, and author: d. New York, N.Y., March 17.

Byers, Mortimer W. (84), U.S. jurist; served on U.S. District Court for Eastern District of New York, 1929–60: d. New York, N.Y., Mar. 5.

Cabot, Godfrey Lowell (101), U.S. chemical manufacturer and philanthropist: b. Boston, Mass., Feb. 26, 1861; d. Boston, Nov. 2, 1962. A descendant of both the Cabots and the Lowells and a Harvard graduate (1882), he developed carbon-black applications and built this business into an international chemical manufacturing enterprise. An early aviation enthusiast and inveterate traveler, he benefited education and research with his endowments.

Caliver, Ambrose (67), U.S. educator; was first Negro to serve as dean of Fisk University (1917–30), and was chief of Adult Education Section, U.S. Office of Education (from 1955): d. Washington, D.C., Jan. 29.

Calkins, Dick (67), U.S. cartoonist; introduced science fiction into newspaper comics by creating "Buck Rogers" comic strip (1929): d. Tucson, Ariz., May 12.

Calvin, William A. (63), U.S. labor leader; president, International Brotherhood of Boilermakers, from 1954: d. Mission, Kans., Jan. 27.

Cannon, Cavendish W. (67), U.S. diplomat; served from 1947 to 1958 as ambassador to Yugoslavia, Portugal, Greece, and Morocco: d. Morón, Spain, Oct. 7.

Cantor, Ida T. (70), wife of U.S. comedian Eddie Cantor (from 1914): d. Beverly Hills, Calif., Aug. 8.

Carreno, Alberto M. (87), Mexican historian; president, Mexican Academy of History: d. Mexico City, Sept. 5.

Case, Francis (Higbee) (65), U.S. senator: b. Everly, Iowa, Dec. 9, 1896; d. Bethesda, Md., June 22, 1962. Moved to South Dakota with his family in 1909. Studied at Dakota Wesleyan University (B.A., 1918) and Northwestern University (M.A., 1920), and served in the U.S. Marine Corps during World War I. Career as a journalist included the post of editor-publisher of the Custer (S. Dak.) *Chronicle* (1931–46). After serving as South Dakota's regent of education from 1931 to 1933, was elected in 1936 as a Republican representative to the U.S. Congress, where he remained until his election to the Senate in 1948 (re-elected, 1954 and 1960). He was a member of the Senate Public Works and Armed Services committees.

Casey, Robert J. (72), U.S. journalist; was reporter and noted war correspondent for Chicago *Daily News,* 1920–47; wrote many books based on his personal experiences: d. Evanston, Ill., Dec. 4.

Castle, William E. (94), U.S. geneticist; professor of zoology, Harvard University, 1908–37; formerly president of American Society of Naturalists and American Society of Zoologists: d. Berkeley, Calif., June 3.

Chavez, Dennis (74), U.S. senator from New Mexico: b. Los Chavez, N. Mex., Apr. 8, 1888; d. Washington, D.C., Nov. 18, 1962. He served as a clerk in the U.S. Senate in 1918–19, and after receiving a law degree from Georgetown University, practiced law in Albuquerque and was elected to the state legislature. He was elected Democratic U.S. congressman in 1930 (reelected 1932), and appointed U.S. senator in 1935 (elected 1936 and reelected four successive times). Of Spanish ancestry, he worked to improve relations between the United States and Latin America. After World War II he became a key figure in defense matters as chairman of the Appropriations Committee's subcommittee for defense.

Christie, John (80), English opera impresario: b. June 1882; d. Glyndebourne, near Lewes, Sussex, England, July 4, 1962. In 1934, founded with his wife, the former Audrey Mildmay (1900–53), the Glyndebourne Festival, which in summer presents operas, mostly by Mozart, in a small theater on his estate in Sussex.

Cicognani, Gaetano (80), Italian cardinal: b. Brisighella, Italy, Nov. 26, 1881; d. Rome, Italy, Feb. 5, 1962. Was ordained a priest in 1904. Following membership in the

Sacred Roman Rota, he studied (beginning in 1912) at the Pontificia Accademia dei Nobili Ecclesiastici in Rome for a career with the papal Secretariat of State. Appointed titular archbishop of Ancira (Ancyra) in 1925 and served as papal nuncio to Bolivia (1925–28), Peru (1928–36), Austria (1936–38), and Spain (1938–53). Was elevated to cardinal priest in 1953, and to cardinal bishop (as bishop of Frascati) in 1959. He was the brother of Amleto Cardinal Cicognani, the present papal secretary of state.

Clark, Rose F. (80), U.S. comedienne; she and her husband, Harry Langdon, formed well-known vaudeville act in early 1900's: d. Los Angeles, Calif., Jan. 27.

Coblentz, William W. (88), U.S. physicist; founded and headed radiometry section of National Bureau of Standards, 1905–45; pioneered in heat and light measurements: d. Washington, D.C., Sept. 15.

Cochrane, Mickey (Gordon Stanley) (59), U.S. baseball player and manager: b. Bridgewater, Mass., April 6, 1903; d. Lake Forest, Ill., June 28, 1962. One of major league baseball's greatest catchers, he played for Philadelphia and Detroit American League teams from 1925 to 1937. Compiled lifetime batting average of .320, and was a star of Philadelphia's championship teams of 1929, 1930, and 1931. As playing manager, led Detroit to league championship in 1934 and to pennant and World Series' victory over Chicago in 1935. Retired as active player in 1937, but continued to manage Detroit until August 1939. Twice was named American League's most valuable player (1928 and 1934); was elected to Baseball Hall of Fame (1947).

*Compton, Arthur H. (69), U.S. physicist and educator: d. Berkeley, Calif., Mar. 15.

Connell, Arthur J. (65), U.S. businessman and national commander of American Legion (1953–54): d. Middletown, Conn., Dec. 18.

Conolly, Adm. Richard L. (69), U.S. naval officer and educator; president Naval War College (1950–53) and Long Island University (from 1953): d. (in airplane crash) New York, N.Y., Mar. 1.

Cook, Walter W. S. (74), U.S. educator and authority on Spanish medieval art; director, New York University Institute of Fine Arts, 1932–51: d. aboard ship in Atlantic en route to New York, Sept. 20.

Corea, Sir Claude (67), Ceylonese diplomat; ambassador to U.S., 1948–54; high commissioner to Britain, 1954–1957; chief of Ceylon's delegation to United Nations, 1958–61: d. Munich, Germany, Sept. 3.

Coty, René Jules Gustave (80), French statesman: b. Le Havre, France, March 20, 1882; d. Le Havre, Nov. 22, 1962. Educated at the University of Caen, he was elected to the French Chamber of Deputies as a "Left" Republican in 1923, and to the Senate in 1935. In 1940, after voting with a majority of Parliament for the enabling act that brought Marshal Henri Pétain to power, he retired from politics for the duration of World War II. Returning to Parliament in 1945 as an "Independent" Republican, he was minister of reconstruction and urbanism in 1947–48. He won election to the Senate and to the Council of the Republic in 1948 and again in 1952. Coty served as last president of the Fourth Republic (1954–59). In May 1958, after an army officers' revolt in Algeria made civil war imminent, he called on Parliament to accept Gen. Charles de Gaulle as premier.

Coussa, Gabriele A. (64), Syrian cardinal; member of Roman Catholic Curia and secretary of Congregation for Eastern Church (from March 1962): d. Rome, Italy, July 29.

Coyle, William R. (83), U.S. congressman (Republican) from Pennsylvania, 1925–27 and 1929–33: d. Bethlehem, Pa., Jan. 30.

Crawford, Jesse (61), U.S. organist; played Paramount (New York) and other theaters; was radio and recording artist: d. Sherman Oaks, Calif., May 28.

Cromwell, Dean B. (82), U.S. track and field coach, at University of Southern California (1909–48); built 12 national championship teams: d. Los Angeles, Calif., Aug. 3.

*Cummings, E. E. (67), U.S. poet: d. North Conway, N.H., Sept. 3.

Cunningham, Sir John (79), British naval officer; was commander of Allied forces in Mediterranean in World War II: d. London, England, Dec. 13.

Curtice, Harlow Herbert (69), U.S. business executive: b. near Eaton Rapids, Mich., Aug. 15, 1893; d. Flint, Mich., Nov. 3, 1962. After two years' business training at Ferris Institute, he started a 44-year career with General Motors Corporation in 1914 in the AC Spark Plug Division, rising to assistant general manager (1923) and president (1929). Following his success as president and general manager of the Buick Motor Division (1933–48), he was made executive vice president of General Motors Corporation (1948) with control over all staff activities. He became acting president of the corporation in 1952, and served as president from 1953 until he retired in 1958.

Curtiz, Michael (72), Hungarian–U.S. film director; won Academy Award in 1943 for his direction of *Casablanca:* d. Hollywood, Calif., Apr. 11.

Cutten, George B. (88), U.S. educator; president of Colgate University, 1922–42: d. Northampton, Mass., Nov. 2.

Dahl, George (81), U.S. theologian and Congregational minister; professor of Hebrew language and literature, Yale University, 1925–49: d. Laconia, N.H., July 31.

Dale, Chester (79), U.S. businessman and art collector; acquired paintings (valued at $10 million) which he donated to many museums; was president of National Gallery of Art: d. New York, N.Y., Dec. 16.

Dallin, David J. (72), Russian–U.S. expert on Soviet affairs; published ten books on Soviet Union: d. New York, N.Y., Feb. 21.

Dalton, (Edward) Hugh (John Neale) (Baron Dalton) (74), British public official: b. Neath, Wales, 1887; d. London, England, Feb. 13, 1962. Studied at Eton, Cambridge University, and the London School of Economics, and was called to the bar, Middle Temple, in 1914. After serving in the army during World War I, he became active in the Labour Party. First elected to Parliament in 1924, and from 1929 to 1931 was a member of Ramsay MacDonald's Labour government as undersecretary for foreign affairs. He was defeated in the general election of 1931, but regained his seat in 1935. During World War II, he served in the Churchill cabinet as minister of economic warfare (1940–42) and president of the Board of Trade (1942–45); in the postwar Labour government, was chancellor of the exchequer (1945–47). Retired from active politics in 1957, and was created a life peer in 1960.

Dantas, Júlio (86), Portuguese author and public official; wrote many poems, novels, and plays; was foreign minister in 1921 and 1923: d. Lisbon, Portugal, May 25.

Danton, George H. (81), U.S. educator and author; chairman of department of modern languages, Union College, Schenectady, N.Y., 1935–47; published historical studies of China: d. Berkeley, Calif., Mar. 11.

Darling, Jay N. (Ding) (85), U.S. cartoonist; as editorial cartoonist for Des Moines *Register* (1906–11; 1913–49), won Pulitzer Prizes in 1923 and 1942; was a leading conservationist: d. Des Moines, Iowa, Feb. 12.

Darwin, Sir Charles G. (75), English physicist; grandson of the naturalist Charles R. Darwin (1809–82): d. Cambridge, England, Dec. 31.

Davies, Clement (78), British public official; was member of Parliament (from 1929) and leader of Liberal Party (1945–56): d. London, England, Mar. 23.

Davis, Arthur Vining (95), U.S. industrialist: b. Sharon, Mass., May 30, 1867; d. Miami, Fla., Nov. 17, 1962. An Amherst College graduate (1888), he started work at $14 a week for the Pittsburgh Reduction Company, renamed the Aluminum Company of America (Alcoa) in 1908. He became president of Alcoa in 1910 and was board chairman from 1928 until his retirement in 1957. A director of many other enterprises, he amassed a great fortune (once estimated at more than $350 million). After 1948 he made vast investments in Florida real estate.

Davis, Clyde B. (68), U.S. novelist; wrote *The Anointed* (1937) and other novels: d. Salisbury, Conn., July 19.

craft gunsight and aeronautical devices: d. New London, Conn., Dec. 5.

de Ghelderode, Michel (63), Belgian playwright; wrote *Barabbas* (1931) and other avant-garde dramas: d. Brussels, Belgium, Apr. 1.

de Gouveia, Teodosio Clemente (72), Portuguese cardinal: b. São Jorge, Madeira Island, May 13, 1889; d. Lourenço Marques, Mozambique, Feb. 6, 1962. He was ordained a priest in 1919 and later served on Madeira and in Rome, where he was rector of the Portuguese College. In 1936, was named titular bishop of Leuce and prelate of Mozambique and, in 1941, archbishop of Lourenço Marques. He was elevated to the College of Cardinals in 1946.

de Gramont, Duke Armand (82), French physicist and authority on aerodynamics; developed electronic microscope and gastroscope: d. near Paris, France, Aug. 2.

del Rio, Angel (62), Spanish–U.S. literary critic and educator; published critical studies of Spanish authors: d. New York, N.Y., Mar. 25.

De Witt, Gen. John L. (82), U.S. Army officer; quartermaster general of Army, 1930–34; commanded Western Defense Area, 1939–43: d. Washington, D.C., June 20.

Dinesen, Isak (pen name of Baroness Karen Dinesen Blixen-Finecke) (77), Danish author: b. near Rungsted, Denmark, April 17, 1885; d. near Rungsted, Sept. 7, 1962. By 1914 she had published a few short stories. In that year she was married to her cousin, Baron Bror Blixen-Finecke, and went with him to Kenya, where they owned a coffee plantation. After their divorce in 1921, she managed the plantation until its failure in 1931, when she returned to Rundstedlund, her estate in Denmark. During the rainy seasons in Kenya she began to write her characteristic tales, eerie fantasies of great narrative power, evocative of unreal or bygone worlds. The first of her four books of stories, *Seven Gothic Tales* (1934), was published originally in the United States. Later collections (with American publication dates) were *Winter's Tales* (1943), *Last Tales* (1957), and *Anecdotes of Destiny* (1958). Under the pseudonym Pierre Andrézel she wrote *The Angelic Avengers* (1947), a novel published in Denmark in 1944 and said to symbolize that country's Nazi occupation. *Out of Africa* (1938), a reminiscence of her life in Kenya, is often considered her best work; its sequel is *Shadows on the Grass* (1960).

Dixon, Edgar H. (57), U.S. electric utility executive; as president (from 1949) of Middle South Utilities, was a key figure in controversial Dixon-Yates public power dispute in 1954–55: d. Washington, D.C., Aug. 2.

Dorr, John V. N. (90), U.S. metallurgist; invented Dorr thickener and classifier for use in ore processing; founded equipment manufacturing companies: d. Wallingford, Conn., June 30.

Douglass, Andrew Ellicott (94), U.S. astronomer and dendrochronologist: b. Windsor, Vt., July 5, 1867; d. Tucson, Ariz., March 20, 1962. He was educated at Trinity College (B.A., 1889) and served as an assistant at the Harvard College Observatory (1889–94), as first assistant astronomer at the Lowell Observatory (1894–1901), and, at the University of Arizona, as professor of physics and astronomy (1906–18) and director of the Steward Observatory (1918–38). As an astronomer, was an authority on the planet Mars and a pioneer in photographing zodiacal light, but was better known as the originator of dendrochronology, the study of tree growth rings.

Doxey, Wall, Sr. (69), U.S. Democratic senator (1941–43) and congressman (1929–41) from Mississippi: d. Memphis, Tenn., Mar. 2.

Duffy, Edmund (63), U.S. editorial cartoonist; won three Pulitzer Prizes (1931, 1934, 1940) while with Baltimore *Sun* (1924–48): d. New York, N.Y., Sept. 13.

Dunn, Frederick S. (68), U.S. educator and authority on international law; director, Center of International Studies at Princeton University, 1951–61: d. Philadelphia, Pa., Mar. 17.

du Pont, Francis V. (67), U.S. engineer; was commissioner of U.S. Bureau of Public Roads, 1953–56: d. Baltimore, Md., May 20.

Durstine, Roy S. (75), U.S. advertising executive; was a founder (1918) of Batten, Barton, Durstine, and Osborn advertising agency; headed his own agency since 1939: d. New York, N.Y., Nov. 28.

Dutcher, R. Adams (76), U.S. educator and authority on nutrition; head of department of agricultural and biological chemistry, Pennsylvania State University, 1921–51: d. Fort Meyers, Fla., Apr. 20.

Dworshak, Henry Clarence (67), U.S. senator: b. Duluth, Minn., Aug. 29, 1894; d. Washington, D.C., July 23, 1962. Publisher of the Burley (Idaho) *Bulletin* from 1924 to 1944, and a conservative Republican, he served in the U.S. House of Representatives from 1939 to 1946, when he was elected to the Senate to fill the unexpired term of John Thomas. Defeated for re-election in 1948 by Bert H. Miller, he was appointed in 1949 to fill Miller's unexpired term, serving thereafter in the upper house until his death.

Dye, Garnett J. (70), U.S. inventor who held over 100 patents, including radio-controlled aerial torpedo: d. Shreveport, La., Jan. 29.

Eddy, Lt. Gen. Manton S. (69), U.S. Army officer; commanded Army divisions in North Africa and Europe in World War II; commander in chief, U.S. Army, Europe, 1952–53: d. Fort Benning, Ga., Apr. 10.

Eddy, Col. William A. (66), U.S. Marine Corps officer, educator, and diplomat; president, Hobart and William Smith Colleges, 1936–42; minister to Saudi Arabia, 1944–46: d. Beirut, Lebanon, May 4.

Egan, Leo (55), U.S. journalist; as a political reporter for New York *Times* (from 1937), reported city and state public affairs: d. Massapequa, N.Y., Nov. 23.

Eisler, Hanns (64), German composer; wrote operas, film scores, and music of East Germany's national anthem; left U.S. in 1948 after being investigated for alleged Communist activities: d. Berlin, East Germany, Sept. 6.

Eklund, Carl R. (53), U.S. explorer; charted Antarctic coast in 1939–41; was chief of polar and Arctic research for U.S. Army: d. Philadelphia, Pa., Nov. 4.

el-Khouri. See Khouri.

Ellard, Roscoe B. (68), U.S. journalist and educator; professor of journalism, Columbia University, 1941–59: d. Alamogordo, N. Mex., Aug. 14.

Elvehjem, Conrad A. (61), U.S. biochemist and educator; identified (1937) the vitamin niacin; taught (from 1923) at and was president (from 1958) of University of Wisconsin: d. Madison, Wis., July 27.

Emerson, Sir Herbert W. (80), British government official; was League of Nations high commissioner for refugees, 1939–46, and director of Intergovernmental Committee for Refugees, 1943–47: d. London, Apr. 12.

Emerson, Kendall, Sr. (86), U.S. physician; director, National Tuberculosis Association, 1928–47: d. Brookline, Mass., Feb. 5.

Enriquez, Gen. Alberto (66), Ecuadoran army officer and president of Ecuador (1937–38): d. Quito, Ecuador, July 13.

Evans, Austin P. (78), U.S. historian; taught at Columbia University, 1915–52; edited *Records of Civilization* (47 vols., 1924–52): d. Barnard, Vt., Sept. 21.

Fairless (original name, Williams), Benjamin Franklin (71), U.S. steel executive: b. Pigeon Run, near Massillon, Ohio, May 3, 1890; d. Ligonier, Pa., Jan. 1, 1962. As a child, was legally adopted by his uncle, Jacob Fairless. Attended the Ohio Northern University, graduating in 1913 with a civil engineering degree. He was employed by the Central Steel Corporation in 1914, rising by 1921 to the post of vice president in charge of operations. In 1926, with the merger of Central Steel and the United Alloy Steel Corporation, was named vice president and general manager of the latter (president and general manager, 1928–30), and in 1930, following the merger of United Alloy Steel with other companies to form the Republic Steel Corporation, became Republic's executive vice president. Joined the United States Steel Corporation in 1935 as president of its subsidiary, the Carnegie-Illinois Steel Corporation, and later, until his retirement in 1955, served the parent organization as president (1938–52), president and chairman (1952–53), and chairman (1953–55).

Farrar, Lilian K. P. (90), U.S. physician and educator; was first woman governor of American College of Surgeons, serving five three-year terms between 1925 and 1947; taught at Cornell University Medical School, 1918–35: d. Lake Placid, N.Y., June 22.

°Faulkner, William H. (64), U.S. author: d. Oxford, Miss., July 6.

Faymonville, Brig. Gen. Philip R. (73), U.S. Army officer and authority on Soviet Union; headed U.S. military mission in USSR during World War II: d. San Francisco, Calif., Mar. 29.

Ferriss, Hugh (72), U.S. architect; pioneered in modern architectural design; wrote *Metropolis of Tomorrow* (1929): d. New York, N.Y., Jan. 29.

Filkins, Grace (97), U.S. actress who starred on New York stage in 1890's: d. New York, N.Y., Sept. 17.

Fine, Irving (47), U.S. composer of chorals, instrumental music, and symphonies; professor of music, Brandeis University, from 1950: d. Boston, Mass., Aug. 23.

Fischer, Anton O. (80), U.S. magazine and book illustrator noted for marine subjects: d. Woodstock, N.Y., Mar. 25.

Fitzgerald, Roy G. (87), U.S. congressman (Republican) from Ohio, 1921–31: d. Dayton, Ohio, Nov. 16.

Fjellbu, Arne (71), Norwegian clergyman; Evangelical Lutheran bishop of Trondheim, 1945–61; was exiled by Nazis in World War II: d. Trondheim, Norway, Oct. 7.

°Flagstad, Kirsten (67), Norwegian operatic soprano: d. Oslo, Norway, Dec. 7.

Ford, Guy S. (89), U.S. educator; taught at University of Minnesota (from 1913) and was its president (1939–41): d. Washington, D.C., Dec. 29.

France, Royal W. (78), U.S. lawyer and educator; defended Dr. Willard Uphaus (in 1959) and others in noted civil liberties cases; professor of economics, Rollins College, 1929–52: d. New York, N.Y., July 10.

Frankl, Paul (83), U.S. art historian; published *The Gothic . . .* (1959) and other books: d. Princeton, N.J., Jan. 30.

Frazier, E. Franklin (67), U.S. sociologist; chairman of sociology department, Howard University, 1934–59; published *Black Bourgeoisie* (1957), a study of Negro middle class in U.S.: d. Washington, D.C., May 17.

Gabrielsson, Assar (70), Swedish industrialist; founded (late 1920's) Volvo Motor Company, Sweden's foremost automobile manufacturer: d. Stockholm, Sweden, May 28.

Gamoran, Emanuel (66), U.S. educator; was educational director for Jewish organizations; helped to modernize Jewish religious education: d. New York, Nov. 14.

Gardiner, James Garfield (78), Canadian public official: b. Farquhar, Ont., Nov. 30, 1883; d. Regina, Sask., Jan. 12, 1962. He was a Liberal member of the Saskatchewan Legislative Assembly from 1914 to 1935 and served as provincial minister of highways (1922–26) and premier (1926–29; 1934–35). As a member of the House of Commons from 1936 to 1958, he held the federal cabinet posts of minister of agriculture (1935–57) and minister of national war services (1940–41).

Garis, Howard R. (89), U.S. author of children's books; created "Uncle Wiggily," a rabbit whose antics were recorded in 75 books: d. Northampton, Mass., Nov. 5.

Gates, Reginald R. (80), English botanist and geneticist; discovered nondisjunction of chromosomes in plants; professor of botany, University of London, 1921–42; wrote *Human Genetics* (2 vols., 1947) and other books: d. London, England, Aug. 12.

Gavin, Francis J. (81), U.S. railroad executive; was president (1939–51) and board chairman (1951–59) of Great Northern Railway: d. St. Paul, Minn., Apr. 7.

Ghosh, Ajoy K. (53), Indian Communist leader; general secretary of Indian Communist Party from 1951: d. New Delhi, India, Jan. 13.

Gibbons, Irene (54), U.S. fashion designer (known as "Irene"); designed clothes for movie stars; owner of Irene, Inc.: d. (suicide) Hollywood, Calif., Nov. 15.

Gibbs, Sir Philip (84), English author noted for newspaper articles and books about World War I: d. London, England, Mar. 10.

Gibson, Edmund Richard (Hoot) (70), U.S. Western film star: b. Tekamah, Nebr., Aug. 6, 1892; d. Woodland Hills, Calif., Aug. 23, 1962. Entering the infant motion picture industry as a stunt man, he had his first starring role in a five-reel Western in 1920. He was seen in some 200 silent films and about 75 "talkies," and became, along with such actors as Tom Mix and William S. Hart, one of the most popular "horse opera" heroes. His last appearance, in a minor role, was in *The Horse Soldiers* (1959).

Giesler, Jerry (75), U.S. lawyer who defended many motion picture celebrities: d. Beverly Hills, Calif., Jan. 1.

Gilroy, William E. (86), U.S. clergyman and editor of *The Congregationalist* (later, *Advance*) from 1922 to 1943: d. Newton Centre, Mass., May 30.

Goetz, Lawrence J. (Larry) (67), U.S. baseball umpire; served in the National League from 1936 to 1947: d. Cincinnati, Ohio, Oct. 31.

Goldblatt, Maurice H. (77), U.S. art historian; director of art galleries, University of Notre Dame; wrote *Leonardo da Vinci* (1961): d. Chicago, Ill., Mar. 2.

Goldenson, Samuel H. (84), U.S. rabbi; was rabbi at Temple Emanu-El, New York, 1934–47; president, Central Conference of American Rabbis, 1933–35: d. Stamford, Conn., Aug. 31.

Golovko, Adm. Arseni G. (55), Soviet naval officer; was first deputy commander of Soviet Navy (from 1956); commanded Northern Fleet against German Navy in World War II: d. USSR, (announced) May 18.

Goodman, Jules E. (85), U.S. playwright; wrote many Broadway dramas, including *The Man Who Played God* (1914): d. Peekskill, N.Y., July 10.

Goodrich, Herbert F. (72), U.S. judge and educator; served on U.S. Third Circuit Court of Appeals from 1940; dean of University of Pennsylvania Law School, 1929–40: d. Philadelphia, Pa., June 25.

Goodspeed, Edgar J. (90), U.S. Biblical scholar and author; chairman of New Testament department, University of Chicago, 1923–37; noted for translations of Bible: d. Los Angeles, Calif., Jan. 13.

Goosens, Eugene (69), English conductor and composer: b. London, England, May 26, 1893; d. Hillingdon, Middlesex, England, June 13, 1962. The son and grandson of symphony orchestra conductors, he studied at the Bruges Conservatory (1902–03), the Liverpool College of Music (1905–06), and the Royal College of Music, London (1907–12). Served as a violinist with the Queen's Hall Orchestra (1911–15) before becoming assistant to Sir Thomas Beecham in 1915. Founded his own orchestra in 1921 and was conductor of the orchestras of the Diaghilev Ballet (1919–23) and the Russian Ballet (1922) and guest conductor of leading English musical organizations. In 1923, went to the United States, where he conducted the Rochester Philharmonic (1923–31) and the Cincinnati Symphony (1931–47). Later, directed the Sydney Symphony (1947–55). His many compositions include two operas (*Judith*, 1925; *Don Juan de Mañara*, 1934), an oratorio (*Apocalypse*, 1951), and two symphonies (1940 and 1942–44). He was knighted in 1955.

Grant, Gordon (Hope) (86), U.S. artist: b. San Francisco, Calif., June 7, 1875; d. New York, N.Y., May 7, 1962. After studying art in London, he was a staff artist on newspapers in San Francisco (1895) and New York (1896–99), and with *Harper's Weekly*, for which he covered the Boer War from 1899 to 1901, and *Puck* (1901–09). Served as an officer on the General Staff in Washington, D.C., during World War I. Thereafter, devoted himself to painting, lithography, and etching, and became well known for his seascapes and paintings of sailors and sailing ships, notably *Old Ironsides* (1927). He also wrote and illustrated books about the sea.

Green, Walter L. (67), U.S. shipping executive; headed American Bureau of Shipping from 1950 to 1959: d. Stamford, Conn., Mar. 26.

Griffin, Gerald (70), U.S. actor and songwriter; president, Songwriters Guild of America, 1936–41; wrote many popular songs: d. Rhinebeck, N.Y., Jan. 11.

Grodinsky, Julius (65), U.S authority on finance; wrote books on railroads and business investment; was professor of finance, University of Pennsylvania, from 1953: d. Philadelphia, Pa., July 9.

Gulick, Charles B. (93), U.S. philologist; professor of Greek literature, Harvard University, 1909–37; wrote many works on Greek history: d. White Plains, N.Y., May 23.

Gunn, Herbert (57), English journalist; edited London *Evening Standard* (1945–50) and other newspapers: d. London, England, Mar. 3.

Gwinn, Ralph W. (77), U.S. congressman (Republican) from New York, 1945–59: d. Boynton Beach, Fla., Feb. 27.

Hackett, Francis (79), Irish author; wrote *I Chose Denmark* (1940), biographies, and other books: d. Copenhagen, Denmark, Apr. 24.

Haig, John T. (84), Canadian public official; Progressive Conservative leader in Senate, 1945–57; minister without portfolio, 1957–58: d. Winnipeg, Man., Oct. 23.

Hall, Walter P. (77), U.S. historian; taught at Princeton University, from 1913; named Dodge professor of history in 1933: d. Austin, Texas, May 3.

Hall, William G. (75), British member of Parliament, from 1929; financial secretary to Treasury in Labour government, 1945–50: d. London, England, Oct. 14.

Hamilton, Eric K. C. (71), English clergyman; was dean of Windsor and domestic chaplain to Queen Elizabeth II: d. London, England, May 21.

Hamilton, Patrick (58), English author; wrote many novels and melodramas, including *Rope* (1929) and *Angel Street* (1942): d. Sheringham, England, Sept. 23.

Hammell, Alfred L. (72), U.S. transport executive; president, Railway Express Agency, 1949–59: d. Indianapolis, Ind., Feb. 8.

Handley Page, Sir Frederick (76), English aviation pioneer; founded (1908) Handley Page, Ltd., first British airplane manufacturer, and produced (1915) Britain's first bombers: d. London, England, Apr. 21.

Hargrave, Thomas J. (70), U.S. business executive; headed Eastman Kodak Company, from 1941: d. Rochester, N.Y., Feb. 21.

Harlow, Dick (72), U.S. football coach; coached at Harvard University (1935–48); member of Football Hall of Fame: d. Bethesda, Md., Feb. 19.

Haseltine, Herbert (84), U.S. sculptor noted for statues of horses, including Man o' War (in Lexington, Ky.), and other animals: d. Paris, France, Jan. 8.

Hatfield, Henry D. (87), U.S. Republican senator from West Virginia, 1929–35; governor of West Virginia, 1913–17: d. Huntington, W.Va., Oct. 23.

Hayes, Mary H. S. (80), U.S. sociologist and former chair-

man of Girl Scouts Executive Committee (elected 1947): d. New York, N.Y., Apr. 9.

Heineman, Dannie N. (89), U.S. industrialist; headed SOFINA, leading international industrial corporation, 1905–55; founded Heineman Foundation for scientific research: d. New York, N.Y., Jan. 31.

Helfrich, Adm. Conrad E. L. (75), Dutch admiral; commanded Allied naval forces during Battle of the Java Sea (1942); commander in chief, Netherlands Navy, 1945–48: d. The Hague, Netherlands, Sept. 20.

Helm, Edith B. (88), U.S. government official; was White House social secretary (1915–20 and 1933–53): d. Washington, D.C., Aug. 6.

Henry, Robert A. C. (77), Canadian engineer and government official; from 1952 to 1954, headed engineering board of St. Lawrence Seaway project: d. St. Petersburg, Fla., Jan. 1.

Hepburn, Thomas N. (82), U.S. urologist; formerly headed staff of Hartford (Conn.) Hospital; father of actress Katharine Hepburn: d. West Hartford, Conn., Nov. 20.

Hesse, Hermann (85), German-Swiss author: b. Calw, Germany, July 2, 1877; d. Montagnola, near Lugano, Switzerland, Aug. 9, 1962. His first novel, *Peter Camenzind*, was published in 1904 (Eng. tr. 1961); other important novels include: *Demian* (1919; tr. 1923); *Der Steppenwolf* (1927; tr. 1929); *Narziss und Goldmund* (1930; tr. as *Death and the Lover*, 1932); and *Das Glasperlenspiel* (1943; tr. as *Magister Ludi*, 1949). Also a poet, short story writer, and essayist, he received the Nobel Prize in literature for 1946. He moved to Switzerland in 1912 and became a citizen in 1923. His abhorrence of militarism and the abrasive influences of modern civilization prompted him to seek solitude on his mountain estate in the Swiss Alps. Major themes in his fiction concern the duality of human nature and experience, and "the difficulties which in the world today confront the individual and his building of a harmonious personality."

Hession, John W. (84), U.S. rifle champion who held many marksmanship titles: d. Clearwater, Fla., Feb. 1.

Hillman, William (66), U.S. news reporter and radio commentator; author of *Mr. President* (1952), on Truman administration: d. New York, N.Y., May 31.

Hoagland, John H. (61), U.S. publishing executive; executive head of Christian Science Publishing Society from 1944: d. Brookline, Mass., Jan. 12.

Hobbes, Halliwell (84), British–U.S. actor; appeared on London and New York stages, and in many films: d. Santa Monica, Calif., Feb. 20.

Hoblitzell, John D., Jr. (49), U.S. senator (Republican) from West Virginia, 1957–59: d. Clarksburg, W. Va., Jan. 6.

Hodes, Henry Irving (62), U.S. Army officer: b. Washington, D.C., March 19, 1899; d. San Antonio, Texas, Feb. 14, 1962. He was graduated from the U.S. Military Academy in 1920, and later attended the Cavalry School, the Command and General Staff School, and the Army War College. Advanced through grades to the rank of general (1956; retired, 1959). In World War II, served in Washington with the General Staff (1940–43), and in Europe as an infantry commander (1944). After a further assignment with the General Staff (1944–45), was named assistant deputy chief of staff (1945–47) and chief of staff of the Fourth Army (1947–49). In 1949, was transferred to Japan as assistant commander of the 1st Cavalry Division; and from 1950 to 1951, as assistant commander of the 7th Infantry Division, participated in the Korean War. In 1951, was appointed a United Nations delegate to the Korean armistice negotiations, and later acted as chief delegate. Subsequently commanded the 24th Infantry Division (1951–53), the Seventh Army in Europe (1954–56), and the U.S. Army in Europe (1956–59).

Hodgson, Ralph (91), English poet noted for lyrical poems celebrating nature; wrote *The Skylark and Other Poems* (1960), and many other volumes of poetry: d. Minerva, Ohio, Nov. 3.

Hoejer, Torvald (55), Swedish educator and historian; published biography of King Charles XIV John and diplomatic histories: d. Djursholm, Sweden, Jan. 6.

Hogue, Mary J. (78), U.S. anatomist noted for research on human nerve cells; taught at University of Pennsylvania School of Medicine, 1924–52: d. Philadelphia, Pa., Sept. 11.

Holenstein, Thomas (66), Swiss public official; minister of economic affairs, 1955–59, and president of Swiss Confederation, 1958: d. Locarno, Switzerland, Oct. 31.

Holland, Henry F. (49), U.S. lawyer and government official; assistant secretary of state for inter-American affairs, 1954–56: d. Greenwich, Conn., July 18.

Holman, Eugene (67), U.S. industrialist; headed Standard Oil Company (New Jersey) from 1944 to 1960: d. New York, N.Y., Aug. 12.

Holmes, John (58), U.S. poet and educator; professor of English, Tufts University, from 1939; published many volumes of poetry: d. Medford, Mass., June 22.

Hopkinson, Charles (93), U.S. painter who portrayed eminent persons: d. Manchester, Mass., Oct. 15.

Houdry, Eugene J. (70), French-born U.S. chemist; invented catalytic cracking process important in manufacture of gasoline: d. Philadelphia, Pa., July 18.

Houghteling, James L. (78), U.S. government official; commissioner of immigration and naturalization, 1937–40: d. Washington, D.C., Apr. 28.

Hu Tsung-Nan (62), Chinese general who commanded Nationalist forces against Japanese and against Chinese Communists: d. Taipei, Taiwan, Feb. 14.

Hubbard, Bernard (73), U.S. Roman Catholic clergyman, Arctic explorer, author, and lecturer: d. Santa Clara, Calif., May 28.

Hu Shih (70), Chinese scholar and diplomat: b. Shanghai, China, Dec. 17, 1891; d. Taipei, Taiwan, Feb. 24, 1962. He was educated in the United States at Cornell University (B.A., 1914) and Columbia University (Ph.D., 1917). Returning to China, he taught at various universities, including Peking National University (1917–37) and the National China Institute (1928–30). Appointed ambassador to the United States in 1938, he served until 1942, when he was recalled to act as an adviser to Chiang Kai-shek. From 1945 until the Chinese Communist mainland victory in 1949, he was chancellor of Peking National University, and after 1958 was president of the Academia Sinica on Taiwan. His greatest achievement was in leading a cultural movement in China which succeeded in discarding the classical Chinese language and substituting for it the contemporary Chinese vernacular. This brought the literature of the past and present to the masses of people who were unfamiliar with the classical Chinese language.

Husing, Ted (60), U.S. sports announcer; broadcast radio descriptions of major sports events from 1924 to 1954: d. Los Angeles, Calif., Aug. 10.

Hutton, Edward Francis (86), U.S. financier and industrialist: b. New York, N.Y., Sept. 7, 1875; d. Old Westbury, N.Y., July 11, 1962. Founded (1904) the Wall Street brokerage firm of E. F. Hutton & Co., of which he was managing partner until 1921 and limited partner thereafter. From 1923 to 1935, was chairman of the Postum Cereal Co. (now General Foods). Established (1949) the Freedoms Foundation, dedicated to maintaining the "indivisible political and economic freedoms inherent in" the Constitution and the Bill of Rights.

Ibert, Jacques (71), French composer: b. Paris, France, Aug. 15, 1890; d. Paris, Feb. 5, 1962. Attended the Paris Conservatory, studying under Gedalge, Fauré, and Vidal. Served in the French Navy during World War I. Won the Prix de Rome (1919) for his cantata *Le Poète et la Fée*, and while living in Rome, composed his most popular work, *Escales* (*Ports of Call*, 1922). Served as director of the French Academy in Rome (1937–55) and administrator of the Paris Opéra and Opéra-Comique (1955–56). His music, closely allied to the impressionism of Ravel, included scores for operas, ballets, and films, as well as orchestral works and compositions for solo instruments.

Ide, John J. (69), U.S. aviation expert; European representative, National Advisory Committee for Aeronautics, 1921–44: d. New York, N.Y., Jan. 12.

Ireland, John (82), English composer; professor of composition, Royal College of Music, 1923–39; composed many orchestral and chamber works, piano solos, and songs: d. Washington, England, June 12.

Irene. See Gibbons, Irene.

Isaacs, Stanley M. (79), U.S. public official; Republican minority leader, New York City Council (first elected to council in 1941); president, Borough of Manhattan, 1938–41: d. New York, N.Y., July 12.

Isom, Edward W. (76), U.S. industrialist; president of Sinclair Rubber, Inc., 1942–52, and board chairman of Sinclair Chemical, Inc., 1952–55; held petroleum processing patents: d. St. Johnsbury, Vt., Jan. 19.

Ives, Irving McNeil (66), U.S. public official: b. Bainbridge, N.Y., Jan. 24, 1896; d. Norwich, N.Y., Feb. 24, 1962. Following service in the Army during World War I, he was graduated from Hamilton College in 1920. Worked for banking firms in New York City (1920–23) and upstate New York (1923–30). Later, beginning in 1933, headed an insurance company in Norwich. Entered Republican politics in 1930, and that year was elected state assemblyman from Chenango County. Served in the Assembly as minority leader (1935), speaker (1936), and majority leader (1937–46), and was coauthor of New York State's pioneering Fair Employment Practices Act (1945). Elected to the U.S. Senate in 1946 (re-elected 1952) and held memberships in the Appropriations and Labor and Public Welfare committees; was also vice chairman of the Senate Select Committee on Improper Activities in the Labor and Management Field (1957). Defeated by W. Averell Harriman for governorship of New York in 1954.

James, James A. (97), U.S. educator; dean, Northwestern University Graduate School, 1913–31; was influential Methodist layman: d. Evanston, Ill., Feb. 12.

*Jeffers, (John) Robinson (75), U.S. poet and playwright: d. Carmel, Calif., Jan. 20.

Johnson, Chic (70), U.S. comedian; appeared on Broadway stage, in films, and on television programs with Ole Olsen as Olsen and Johnson comedy team: d. Las Vegas, Nev., Feb. 26.

Jones, Marguerite E. (73), U.S. educator; chairman of speech and dramatics department, Hunter College, 1944–53: d. New York, N.Y., Jan. 22.

Jones, Mary G. (90), U.S. philanthropist; with her hus-

band, Jesse H. Jones, she founded (1938) Houston Endowment to aid educational, religious, and charitable institutions: d. Houston, Texas, Aug. 20.

Jones, Sir Roderick (84), British journalist; headed Reuters news agency, 1915–41: d. London, England, Jan. 23.

Jones, W. Alton (70), U.S. industrialist; headed Cities Service Company, petroleum producers, from 1939 to 1959: d. (in airplane crash) New York, N.Y., Mar. 1.

Joslin, Elliott P. (92), U.S. physician and authority on diabetes; clinical professor of medicine, Harvard Medical School, 1922–37: d. Brookline, Mass., Jan. 28.

Kahn, Roger W. (54), U.S. songwriter, orchestra leader, and test pilot; wrote scores for musical comedies and popular songs: d. New York, N.Y., July 12.

Kalomiris, Manolis (78), Greek composer; founded (1926) and directed National Conservatory of Athens; created traditional musical works: d. Athens, Greece, Apr. 3.

Kazakevich, Emmanuil G. (49), Soviet novelist; won two Stalin prizes for war novels, *The Star* (1947) and *Spring on the Oder* (1949): d. USSR, Sept. 22.

Kent, Harry A. (81), Canadian theologian and educator; was a founder of United Church of Canada: d. Kingston, Ont., Jan. 4.

Khalidi, Hussein Fakhri al- (66), Jordanian public official; was prime minister (1957) and foreign minister (1953–54; 1956): d. Amman, Jordan, Feb. 6.

Khouri, Faris el-, Syrian statesman: b. Kfeir, near Hasbaya, Syria (now in Lebanon), 1879(?); d. Damascus, Syria, Jan. 2, 1962. He was educated at the American University of Beirut (B.A., 1897), and later (1908) became a lawyer in Damascus and was a professor of law at the Syrian University (1919–40). In a political career that spanned more than 40 years, beginning as a deputy to the Ottoman Parliament from 1914 to 1918, he held a variety of public posts, including those of president of the Syrian Parliament (1936–39, 1943–44, and 1945–49), minister of foreign affairs (1941), and premier (1944–45 and 1954–55). He was also, at various times, chief Syrian delegate to the United Nations, and served as president of the Security Council in 1948.

Kindelberger, James H. (67), U.S. aircraft manufacturer; headed (from 1935) North American Aviation, Inc., which produced 14% of U.S. military aircraft in World War II: d. Pacific Palisades, Calif., July 27.

Klimov, Gen. Vladimir Y. (70), Soviet engineer who developed fighter-plane jet engines: d. Moscow, USSR, Sept. 9.

Kline, Franz Josef (51), U.S. artist: b. Wilkes-Barre, Pa., May 23, 1910; d. New York, N.Y., May 13, 1962. Studied art at Boston University and Heatherly's Art School, London (1937). Began as a realistic painter, but turned to abstract expressionism about 1950 and became a leader of that school. His paintings, usually broad black strokes applied with a house painter's brush to white canvas, have attracted considerable critical controversy and have been widely represented in exhibitions and museums in the United States and abroad.

Kornfeld, Albert (61), U.S. writer and editor; wrote books on home decoration; editor, *House and Garden*, 1946–50: d. Freudenstadt, Germany, Aug. 16.

Koskenniemi, Veikko A. (77), Finnish author and educator; published many poems and essays; formerly dean of Turku University: d. Helsinki, Finland, Aug. 4.

Kotler, Aaron (71), Polish-born U.S. rabbi; was an authority on the Torah; founded (1943) school for higher rabbinical study in Lakewood, N.J.: d. New York, N.Y., Nov. 29.

Kovacs, Ernie (42), U.S. comedian: b. Trenton, N.J., Jan. 23, 1919; d. (auto accident) Los Angeles, Calif., Jan. 13, 1962. Attended the New York School of the Theatre (1935–37), acted for several years in stock companies, and, from 1945 to 1950, was a newspaper columnist and radio broadcaster in Trenton. Began his TV career in 1950 with a local Philadelphia station, and, from 1951, appeared on national networks, both in his own shows and as a guest star. He was noted for his improvisation and offbeat humor, particularly the use of zany camera and sound effects and the creation of such characterizations as the Nairobi Trio and Percy Dovetonsils. Also starred successfully in motion pictures, including *Operation Mad Ball* (1957), *Our Man in Havana* (1960), *Strangers When We Meet* (1960), and *Sail a Crooked Ship* (1962), and was the author of *Zoomar* (1957), *How to Talk at Gin* (1962), and *Please Excusa da Pencil* (1962). He was married to actress Edie Adams, his second wife, in 1954.

°Kreisler, Fritz (86), U.S. violinist and composer: d. New York, N.Y., Jan. 29.

Kristensen, Knud (81), Danish public official; premier, 1945–47: d. Copenhagen, Denmark, Sept. 29.

Kump, Herman G. (84), U.S. public official; Democratic governor of West Virginia, 1933–37: d. Elkins, W. Va., Feb. 14.

Lamb, Harold A. (69), U.S. historian and novelist; published biographies of historical figures, including *Genghis Khan* (1927): d. Rochester, Minn., Apr. 9.

Lamote de Grignon, Ricard (62), Spanish composer and conductor; composed opera, *The Dragon's Head* (1960), and other works: d. Barcelona, Spain, Feb. 5.

Landis, Carney (65), U.S. psychologist; professor of psychology, Columbia University, 1943–59; wrote many books on mental illness: d. New York, N.Y., Mar. 5.

Lang, Lucy R. (78?), U.S. labor leader; pioneered in organizing unions; wrote autobiography, *Tomorrow Is Beautiful* (1948): d. Los Angeles, Calif., Jan. 25.

Langner, Lawrence (72), British–U.S. lawyer, theatrical producer, and playwright: b. Swansea, Wales, May 30, 1890; d. New York, N.Y., Dec. 26, 1962. A U.S. resident since 1911 and citizen since 1917, he became a prominent patent attorney. In 1919 he founded the Theatre Guild, which produced such notable plays as Shaw's *Back to Methuselah* (1921), O'Neill's *Strange Interlude* (1928), and the Rodgers-Hammerstein *Oklahoma!* (1944). In 1950 he founded the Shakespeare Festival Theatre at Stratford, Conn. Langner himself was the author of more than 20 plays, as well as legal works.

Larsen, Lt. Gen. Henry L. (71), U.S. Marine Corps officer; military governor of Guam in World War II: d. Denver, Colo., Oct. 2.

°Laughton, Charles (63), English–U.S. actor: d. Hollywood, Calif., Dec. 15.

Lawson, Edward B. (67), U.S. diplomat; ambassador to Israel, 1954–59: d. Washington, D.C., Nov. 19.

Levitt, Abraham (82), U.S. building contractor; his firm mass-produced over 60,000 houses after World War II, and built three suburban communities (each named Levittown) in eastern U.S.: d. Manhasset, N.Y., Aug. 20.

LeWald, Leon T. (88), U.S. roentgenologist and educator; was credited with introducing mass X-ray examinations in U.S.: d. New York, N.Y., June 16.

Lewis, A(lma) D(ennie) (72), U.S. labor leader and government official; president, United Mine Workers District 50, from 1946; assistant director general, U.S. Employment Service, 1930–34; d. Washington, D.C., Jan. 24.

Lhote, André (76), French cubist painter and art critic: d. Paris, France, Jan. 24.

Llewellyn, Karl N. (68), U.S. legal authority; taught at law schools of Columbia University and University of Chicago; published *The Common Law Tradition: Deciding Appeals* (1960): d. Chicago, Ill., Feb. 13.

Longstreet, Helen D. (99), U.S. journalist and civic leader; was widow of Confederate Gen. James Longstreet: d. Milledgeville, Ga., May 3.

Lord, F. Townely (68), English clergyman; president, Baptist World Alliance, 1950–55; edited *The Baptist Times* magazine, 1941–56: d. Greenville, S.C., Feb. 9.

Love, J(ames) Spencer (65), U.S. textile manufacturer; founded (1923) and headed Burlington Mills Company: d. Palm Beach, Fla., Jan. 20.

Lovejoy, Arthur Oncken (89), U.S. philosopher and teacher: b. Berlin, Germany, Oct. 10, 1873; d. Baltimore, Md., Dec. 30, 1962. Professor of philosophy at Johns Hopkins University, he was best known as a leader in the History-of-Ideas Movement and in the theory of knowledge. The best known of his many books is *The Great Chain of Being* (1936).

Lovejoy, Frank (50?), stage, screen, and television actor: b. New York, N.Y., Mar. 28, 1912(?); d. Paramus, N.J., Oct. 2, 1962. The ruggedly handsome actor, who specialized in Army and police roles in movies and television, made his Broadway debut in 1934 in Elmer Rice's *Judgment Day*. After a short radio career in Cincinnati, he returned to New York and appeared in over 4,000 television programs, including *The Caine Mutiny Court-Martial* and the mystery-adventure series *Meet McGraw*. In motion pictures, he played leading roles in *Home of the Brave* (1949), *Breakthrough* (1950), *Force of Arms* (1951), *The Hitch-Hiker* (1953), and *Strategic Air Command* (1955), among others. Back on Broadway, he won wide acclaim in 1960–61 for his portrayal as the bigoted politician in *The Best Man*. He was married to actress Joan Banks.

Lowry, John (79), U.S. building contractor; his firm built Radio City Music Hall and other prominent New York City buildings: d. Mt. Vernon, N.Y., Nov. 3.

Luciano, Charles (Lucky) (65), Italian-born U.S. criminal and vice overlord: d. Naples, Italy, Jan. 26.

Luhan, Mabel Dodge (83), U.S. patron of the arts; sponsored D. H. Lawrence and other artists; published *Lorenzo in Taos* (1932): d. Taos, N. Mex., Aug. 13.

Mayer, Rudolph L. (67), German-born microbiologist; discovered pyribenzamine, anti-hay fever drug: d. Washington, D.C., June 23.

Mei Yi-chi (73), Chinese educator; president, National Tsing Hua University, 1929–31; minister of education in Chinese Nationalist government, 1958–61: d. Taipei, Taiwan, May 19.

Merriman, Lord Sir Frank B. (81), British jurist; was solicitor general, 1928–29 and 1932–33: d. London, England, Jan. 18.

Meserve, Frederick H. (96), U.S. collector of Lincoln and Civil War photographs; published rare photograph collections: d. New York, N.Y., June 25.

Meštrović, Ivan (78), U.S. sculptor: b. Vrpolje, Croatia, Aug. 1, 1883; d. South Bend, Ind., Jan. 16, 1962. Called by Rodin "the greatest phenomenon among the sculptors," his genius and astonishing productivity won him early and lasting worldwide fame, especially for his modern religious sculptures. He was rector of the Academy of Fine Arts at Zagreb, Croatia in 1923–42, and became professor of fine arts at Syracuse University in 1947. From 1955 until his death, he served as resident sculptor at Notre Dame University.

Milburn, Lt. Gen. Frank W. (70), U.S. Army officer; commanded 5th Army in Korea, 1950–52: d. Missoula, Mont., Oct. 25.

Miller, Clem (45), U.S. congressman (Democratic) from California, from 1959; published *Member of the House: Letters of a Congressman* (1962): d. (airplane crash) near Eureka, Calif., Oct. 7.

Mills, C. Wright (46), U.S. sociologist, author, and educator; wrote *The Power Elite* (1956) and other sociological studies: d. Nyack, N.Y., Mar. 20.

Minciotti, Esther (74), Italian–U.S. actress; appeared in character roles on New York stage and in *Marty* (1955) and other films: d. New York, N.Y., Apr. 15.

Mitchell, Thomas (70), U.S. actor: b. Elizabeth, N.J., July 11, 1892; d. Beverly Hills, Calif., Dec. 17, 1962. He entered show business as a writer and made his debut as an actor in Shakespearean roles, touring in 1913–15 with Charles Coburn's troupe. Thereafter he appeared regularly on the stage until he made his first film, *Cloudy With Showers* (1934), which he also wrote. Mitchell was one of very few Hollywood actors to achieve stardom as a character actor. His many films included *Lost Horizon* (1936), his first major film; *Stagecoach* (1938), for which he won an Academy Award; and *Pocketful of Miracles* (1961), his last film. On the stage, he won an Antoinette Perry Award and a Donaldson Award in 1953 for his performance in the musical *Hazel Flagg*. In the previous year he won a television Emmy Award.

Mollison, Irvin C. (63), U.S. jurist; served on U.S. Customs Court from 1945; was first Negro appointed to federal bench in U.S.: d. Chicago, Ill., May 5.

Mondor, Henri (76), French poet, critic, and physician; published more than 40 books on medicine and literature: d. Neuilly-sur-Seine, France, Apr. 7.

°Monroe, Marilyn (36), U.S. film star: d. (suicide) Los Angeles, Calif., Aug. 5.

Moore, Victor (Frederick) (86), U.S. comedian: b. Hammonton, N.J., Feb. 24, 1876; d. East Islip, N.Y., July 23, 1962. The comedy symbol of the timid soul—the meek and unassuming little man who is victimized by unscrupulous, hardheaded bullies—he appeared first in vaudeville and then on the legitimate stage, especially in musical comedy. His most famous portrayal was as Vice President Throttlebottom in *Of Thee I Sing* (1931). He was also seen in *Oh, Kay!* (1926), *Funny Face* (1927), *Let 'Em Eat Cake* (1933), *Anything Goes* (1934), *Louisiana Purchase* (1940), a revival of *On Borrowed Time* (1953), and, finally, a revival of *Carousel* (1957). He also played in motion pictures and on radio and television.

Morgan-Powell, Samuel (95), English-Canadian journalist; served consecutively as news editor, drama critic, and editor in chief of the Montreal *Star* from 1908 to 1945; d. Montreal, Que., June 4.

Mortensen, Jess (54), U.S. track and field coach; his University of Southern California teams won seven national championships (after 1951): d. Los Angeles, Calif., Feb. 19.

Moulton, Arthur W. (89), U.S. clergyman; Protestant Episcopal bishop of Utah, 1920–46: d. Salt Lake City, Utah, Aug. 18.

°Muench, Aloisius Joseph (73), U.S. cardinal: d. Rome, Italy, Feb. 15.

Mulki, Fawzi el- (52), Jordanian premier (1953–54) and chief delegate to United Nations (from 1961): d. New York, N.Y., Jan. 10.

Murdoch, James Y. (71), Canadian industrialist; founded Noranda Mines, Ltd., and directed other industrial enterprises: d. Toronto, Ont., Apr. 18.

Murphy, Arthur E. (60), U.S. philosopher and educator; headed philosophy departments of four universities (Illinois, Cornell, Washington, and Texas); published *The Uses of Reason* (1943): d. Austin, Texas, May 12.

Murphy, Howard A. (65), U.S. musicologist; chairman of Department of Theory, Manhattan School of Music, from 1950; wrote books on musical techniques: d. New York, N.Y., Feb. 24.

Murphy, James J. (64), U.S. Democratic congressman from New York, 1949–53: d. New York, N.Y., Oct. 19.

Murphy, John W. (59), U.S. representative (Democrat) from Pennsylvania (1943–46) and federal district court judge (from 1946): d. Scranton, Pa., Mar. 28.

Nelson, Charles P. (54), U.S. congressman (Republican) from Maine, 1949–57: d. Augusta, Me., June 8.

Neumann, Therese (64), German ascetic who bore a religious stigmata (from 1926) and was a figure of much

religious and scientific discussion: d. Konnersreuth, Germany, Sept. 18.

Newberry, Edgar A. (75), U.S. retail merchant; headed J. J. Newberry Company, variety-department store chain, from 1939: d. New York, N.Y., Jan. 25.

Newsom, Bobo (Louis Norman) (55), U.S. baseball pitcher for nine major league clubs, 1929–53; noted as a colorful personality: d. Orlando, Fla., Dec. 7.

Neyland, Brig. Gen. Robert R. (70), U.S. football coach and former Army officer; coached football teams of University of Tennessee (1926–53) to national prominence: d. New Orleans, La., Mar. 28.

Nichols, Hobart (93), U.S. painter whose landscapes are in many museums; president of National Academy of Design, 1939–49: d. New York, N.Y., Aug. 14.

Niebuhr, H(elmut) Richard (67), U.S. theologian: b. Wright City, Mo., Sept. 3, 1894; d. Greenfield, Mass., July 5, 1962. After study at Eden Theological Seminary, Webster Groves, Mo., was ordained (1916) a minister in the Evangelical and Reformed Church. Later attended Yale University (B.D., 1923; Ph.D., 1924). Served as president of Elmhurst (Ill.) College (1924–27), and from 1931 was on the faculty of Yale University Divinity School, where he held the post of Sterling professor of theology and Christian ethics (from 1954).

Noyce, Wilfrid (43), English mountain climber who was member of British expedition which scaled Mt. Everest in 1953: d. (mountain-climbing accident) Mt. Garmo, USSR, July 24.

Nutter, Donald G. (46), U.S. public official; governor (Republican) of Montana from 1961: d. in airplane crash near Wolf Creek, Mont., Jan. 25.

O'Brien, William D. (83), U.S. Roman Catholic archbishop; auxiliary archbishop of Chicago (from 1953); president, Catholic Church Extension Society of U.S. (from 1925): d. San Pierre, Ind., Feb. 19.

Ogburn, Charlton (79), U.S. lawyer; was counsel for American Federation of Labor, 1933–38, and Reconstruction Finance Corporation, 1940–43; author of several books: d. New York, N.Y., Feb. 23.

Olinsky, Ivan G. (84), U.S. artist noted for portraits of prominent persons: d. New York, N.Y., Feb. 11.

Olson, Culbert L. (85), U.S. public official; Democratic governor of California, 1939–43: d. Los Angeles, Calif., Apr. 13.

O'Mahoney, Joseph Christopher (78), former U.S. senator from Wyoming: b. Chelsea, Mass., Nov. 5, 1884; d. Bethesda, Md., Dec. 1, 1962. Educated at Columbia University, he worked for newspapers in Boulder, Colo., and Cheyenne, Wyo., and then was graduated from Georgetown University Law School (1920). He moved up in the Democratic Party and was vice chairman for the 1932 and 1936 national campaigns. Appointed (1933) to fill out the term of Sen. John B. Kendrick, he was elected to the first of three successive Senate terms in 1934, was defeated in 1952, but won election again in 1954. A sponsor and advocate of liberal legislation, he became known as a stanch foe of "big business"—a reputation which he enhanced as chairman of several Senate inquiries into the activities of giant corporations.

O'Neill, Steve (69), U.S. baseball player and manager; led Detroit to World Series victory in 1945, and managed three other clubs: d. Cleveland, Ohio, Jan. 26.

Orchard, John E. (68), U.S. educator and Far Eastern specialist; professor of economic geography, Columbia University, 1938–61: d. Charlottesville, Va., Jan. 28.

Page, Sir Frederick Handley (76), British aircraft manufacturer: b. Nov. 15, 1885; d. London, England, April 21, 1962. In 1909, founded Handley Page, Ltd., one of Britain's leading aircraft companies, and was its chairman and managing director. Invented (1921) the slotted wing, which enables aircraft to retain lift when flying below normal speeds. Built Britain's first large-scale commercial plane, the 40-seat Handley Page Hannibal, and manufactured bombers, including 60,000 Halifax bombers during World War II and the contemporary Victor bombers. He was knighted in 1942.

Panico, Giovanni (67), Italian cardinal: b. Tricase, near Otranto, Italy, April 12, 1895; d. Tricase, July 7, 1962. He was ordained a priest in 1919, and four years later became a member of the Vatican diplomatic corps. Named archbishop in 1935, he subsequently served as chief papal representative to Australia (1935–48), Peru (1948–53), Canada (1953–59), and Portugal (1959–62). Elevated to cardinal on March 19, 1962.

Papanicolaou, George N. (78), U.S. medical researcher; discovered Pap smear test for diagnosing uterine cancer: d. Miami, Fla., Feb. 19.

Parker, Cola G. (72), U.S. business executive; president of Kimberly-Clark Corporation (1942–53), and of National Association of Manufacturers (1956): d. Menasha, Wis., June 27.

Parsons, Alice Beal (75), U.S. author; published eight novels, including *The Mountain* (1944): d. Nyack, N.Y., Apr. 14.

Patterson, Charles L. (56), U.S. railroad executive and chairman of New York City Transit Authority (from 1955): d. New York, N.Y., Oct. 13.

Patterson, Morehead (64), U.S. industrialist: b. Durham, N.C., Oct. 9, 1897; d. Washington, D.C., Aug. 5, 1962. Under his chairmanship (since 1943), American Machine and Foundry Co. expanded its sales from $15 million to $500 million. His development of the Automatic Pinspotter for bowling alleys was largely responsible for this gain and for the greatly increased popularity of bowling since the 1950's. In 1954 he represented the United States at the U.N. Committee on Disarmament, and in 1954–55 (with the rank of ambassador) at the International Atomic Energy Agency negotiations in London.

Paul, Josephine Bay (61), U.S. business executive and sportswoman; was president of A. M. Kidder and Co. brokerage firm (from 1956), and chairman of American Export Lines (1955–60): d. New York, N.Y., Aug. 6.

Payne, Kenneth W. (72), U.S. journalist; executive editor, *The Reader's Digest*, 1940–61: d. Pound Ridge, N.Y., Oct. 19.

Peacock, Sir Edward R. (91), Canadian-born British financier; formerly financial adviser to royal family, and a director of Bank of England: d. London, England, Nov. 19.

Pepper, O. H. Perry (77), U.S. physician; formerly professor of medicine, head of medical department (1937–47), University of Pennsylvania: d. Philadelphia, Pa., Jan. 28.

Percival, Milton F. (79), U.S. radiologist; founder and director (1912–52) of department of radiology, Methodist Hospital, Philadelphia; co-discoverer of first radium detector: d. Philadelphia, Pa., Jan. 17.

Pérez de Ayala, Rámon (81), Spanish novelist and diplomat; helped to found Spanish republic in 1931; ambassador to England, 1931–36: d. Madrid, Spain, Aug. 5.

Perrin, Porter G. (66), U.S. philologist; professor of English, University of Washington, from 1947; wrote textbooks on English usage: d. Seattle, Wash., Sept. 9.

Petri, Egon (81), German pianist who made many concert appearances in Europe and U.S.; formerly taught at University of California: d. Berkeley, Calif., May 27.

Pevsner, Antoine (76), Russian-French sculptor who founded Constructivist school (with his brother, Naum Gabo): d. Paris, France, Apr. 12.

°Piccard, Auguste (78), Swiss explorer: d. Lausanne, Switzerland, Mar. 24.

Pogodin, Nikolai F. (61), Soviet playwright; won Stalin and Lenin prizes for trilogy about Lenin (1937–58): d. Moscow, USSR, Sept. 19.

Pollard, Snub (Harry) (72), U.S. comedian who appeared in about 500 silent films: d. Burbank, Calif., Jan. 19.

Portinari, Cândido (58), Brazilian painter: b. Brodowski, Brazil, Dec. 29, 1903; d. Rio de Janeiro, Brazil, Feb. 6, 1962. Brazil's best-known contemporary painter, he most often portrayed the life of the common people of his native state, São Paulo. His paintings are exhibited in major museums of the U.S., Latin America, and western Europe. He studied at the National School of Fine Arts, Rio de Janeiro, and after 1930 became a fashionable portrait painter. In 1939 he executed murals for the Brazilian Pavilion at the New York World's Fair; other murals are in the Library of Congress and in the UN General Assembly Hall. A well-known Communist, he was active in São Paulo politics.

Potter, Charles F. (76), U.S. Unitarian minister; founded (1929) First Humanist Society of New York; wrote many books on religion: d. New York, N.Y., Oct. 4.

Prescott, Samuel C. (89), U.S. biologist and educator; was first dean of School of Science, Massachusetts Institute of Technology (1932–42); pioneered in industrial biology: d. Boston, Mass., Mar. 19.

Putnam, Nina W. (77), U.S. author of 12 popular novels and many short stories: d. Cuernavaca, Mexico, Mar. 8.

Attended Amherst College (B.A., 1891), Harvard University (B.A., 1896; M.A., 1897), where he studied under William James, and Columbia University (Ph.D., 1899). Was a member of the psychology faculty of Columbia University (1903–42; professor, 1909–42). Wrote several basic texts in his field, including *Psychology* (1921; 5th edition with D. G. Marquis, 1947) and *Experimental Psychology* (1938; revised 1954).

Wordie, Sir James (72), English explorer, geologist, and geographer; was chairman of British National Committee for the International Geophysical Year, 1957–58: d. Cambridge, England, Jan. 16.

Yavlinsky, Nathan A. (50), Soviet physicist; winner of Stalin and Lenin prizes (1949 and 1958) for thermonuclear research: d. USSR, July 28.

°Young, Owen D. (87), U.S. industrialist and monetary expert: d. St. Augustine, Fla., July 11.

Yturralde y Orbegoso, Mariano de (57), Spanish ambassador to U.S. (from 1960) and Canada (1953–55): d. Washington, D.C., Mar. 5.

Zink, Harold (61), U.S. political scientist; professor of political history at DePauw University (1930–48) and Ohio State University (from 1948); published many books on government: d. Columbus, Ohio, June 19.

LIST OF ILLUSTRATIONS

Indexed below under major subject headings are the illustrations contained in this volume. Bold-faced entries represent main articles which are illustrated. Light-faced entries (and most subentries) represent subjects appearing under other article headings.

CUMULATIVE INDEX TO THE AMERICANA ANNUAL, 1959-1963 · INDEX

This Index covers editions of THE AMERICANA ANNUAL from 1959 to the present volume (1963), inclusive. Cumulative indexes to all editions of THE ANNUAL, 1923 to 1932, inclusive, will be found in the 1933 ANNUAL; for the years 1933 to 1941, inclusive, in the 1942 ANNUAL, and for the years 1942 to 1945, inclusive, in the 1946 ANNUAL. Beginning with the 1950 ANNUAL, indexes are cumulative for five years, covering the current and preceding four editions.

Main article headings appear in this Index as bold-faced capitals; subjects within articles appear as lower-case entries. Article page numbers and general references appear at the beginning of each entry; the subentries which follow them direct the reader to related topics appearing elsewhere. Both the general references and the subentries should be consulted for maximum usefulness of this Index. Maps, charts, etc. are indexed herein; halftone illustrations in this edition are indexed on pages 767–770. Figures in bold-faced type indicate the year of the volume; page numbers are in light type. Cross references, unless otherwise noted, are to entries in this Index.
